27.12. Remote Desktop Protocol (Windows Terminal Server)

A key component of Terminal Server is the Remote Desktop Protocol which allows a thin client to communicate with the Terminal Server over the network. This protocol is based on International Telecommunications Union's (ITU) T.120 protocol, an international, standard multichannel conferencing protocol currently used in the Microsoft NetMeeting conferencing software product. It is tuned for high-bandwidth enterprise environments and will also support encrypted sessions.

31.872. Internet Content Adaptation Protocol

The Internet Content Adaptation Protocol (ICAP) is a lightweight HTTP-like protocol which is used to extend transparent proxy servers, thereby freeing up resources and standardizing the way in which new features are implemented. ICAP is generally used to implement virus scanning and content filters (including censorware) in transparent HTTP proxy caches.
