1. Introduction

1.1. Scope

This document is aimed in providing an detailed specification and a comprehensive listing as a reference for the whole set of AT command

1.2. Audience

Readers of this document should be familiar with Telit modules and their ease of controlling by means of AT Commands.

1.3. Contact Information, Support

For general contact, technical support, to report documentation errors and to order manuals, contact Telit Technical Support Center (TTSC) at:

<u>TS-EMEA@telit.com</u> <u>TS-NORTHAMERICA@telit.com</u> <u>TS-LATINAMERICA@telit.com</u> <u>TS-APAC@telit.com</u>

Alternatively, use:

http://www.telit.com/en/products/technical-support-center/contact.php

For detailed information about where you can buy the Telit modules or for recommendations on accessories and components visit:

http://www.telit.com

To register for product news and announcements or for product questions contact Telit Technical Support Center (TTSC).

Our aim is to make this guide as helpful as possible. Keep us informed of your comments and suggestions for improvements.

Telit appreciates feedback from the users of our information.

1.4. Document Organization

This document contains the following chapters:

<u>Chapter 1: "Introduction"</u> provides a scope for this document, target audience, contact and support information, and text conventions.

<u>Chapter 2: "Overview"</u> about the aim of this document and implementation suggestions.

<u>Chapter 3: "AT Commands"</u> The core of this reference guide.

1.5. Text Conventions

<u>Danger – This information MUST be followed or catastrophic equipment failure or</u> <u>bodily injury may occur.</u>

Caution or Warning – Alerts the user to important points about integrating the module, if these points are not followed, the module and end user equipment may fail or malfunction.

Tip or Information – Provides advice and suggestions that may be useful when integrating the module.

All dates are in ISO 8601 format, i.e. YYYY-MM-DD.

2. Overview

2.1. About the document

This document is to describe all AT commands implemented on the Telit wireless modules listed on the Applicabilty Table.

NOTE:

Telit suggests all the system developers to use always the newer AT Commands Interface Style defined by AT#SELINT=2; and in case you are starting a new design we highly recommend you to use the newer AT Commands Interface Style defined by AT#SELINT=2 which gives you a possibility to include all Telit's new features and also all future implementations.

Moreover, Telit suggests to use the following settings to get the performance most customers are looking for:

AT#SMSMODE=1 AT#REGMODE=1

3. AT COMMANDS

The Telit wireless module family can be controlled via the serial interface using the standard AT commands¹. The Telit wireless module family is compliant with:

- 1. Hayes standard AT command set, in order to maintain the compatibility with existing SW programs.
- 2. 3GPP TS 27.007 specific AT command and GPRS specific commands.
- 3. 3GPP TS 27.005 specific AT commands for SMS (Short Message Service) and CBS (Cell Broadcast Service)
- 4. FAX Class 1 compatible commands

Moreover Telit wireless module family supports also Telit proprietary AT commands for special purposes.

The following is a description of how to use the AT commands with the Telit wireless module family.

3.1. Definitions

The following syntactical definitions apply:

- <CR> Carriage return character, is the command line and result code terminator character, which value, in decimal ASCII between 0 and 255, is specified within parameter S3. The default value is 13.
- <LF> Linefeed character, is the character recognised as line feed character. Its value, in decimal ASCII between 0 and 255, is specified within parameter S4. The default value is 10. The line feed character is output after carriage return character if verbose result codes are used (V1 option used) otherwise, if numeric format result codes are used (V0 option used) it will not appear in the result codes.
- <...> Name enclosed in angle brackets is a syntactical element. They do not appear in the command line.
- [...] Optional subparameter of a command or an optional part of TA information response is enclosed in square brackets. Brackets themselves do not appear in the command line. When subparameter is not given in AT commands which

¹ The AT is an ATTENTION command and is used as a prefix to other parameters in a string. The AT command combined with other parameters can be set up in the communications package or typed in manually as a command line instruction.combined with other parameters can be set up in the communications package or typed in manually as a command line instruction.

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 12 of 604

have a Read command, new value equals to its previous value. In AT commands which do not store the values of any of their subparameters, and so have not a Read command, which are called *action type* commands, action should be done on the basis of the recommended default setting of the subparameter.

3.2. AT Command Syntax

The syntax rules followed by Telit implementation of either Hayes AT commands, GSM commands and FAX commands are very similar to those of standard basic and extended AT commands. A special command **(#SELINT**, see §3.5.2.1.1) has been introduced in order to have an AT interface very close to the standard one.

There are two types of extended command:

- **Parameter type commands**. This type of commands may be "set" (to store a value or values for later use), "read" (to determine the current value or values stored), or "tested" (to determine ranges of values supported). Each of them has a test command (trailing =?) to give information about the type of its subparameters; they also have a Read command (trailing ?) to check the current values of subparameters.
- Action type commands. This type of command may be "executed" or "tested".
- "executed" to invoke a particular function of the equipment, which generally involves more than the simple storage of a value for later use
- "tested" to determine:

(if the command **#SELINT=0** or **#SELINT=1** has been issued, see §3.5.2.1.1)

if subparameters are associated with the action, the ranges of subparameters values that are supported; if the command has no subparameters, issuing the correspondent Test command (trailing =?) raises the result code "ERROR". Note: issuing the Read command (trailing ?) causes the command to be executed.

(if the command **#SELINT**=2 has been issued, see §3.5.2.1.1)

whether or not the equipment implements the Action Command (in this case issuing the correspondent Test command - trailing =? - returns the OK result code), and, if subparameters are associated with the action, the ranges of subparameters values that are supported.

Action commands don't store the values of any of their possible subparameters.

Moreover:

• (for #SELINT=0 or #SELINT=1 only)

An enhanced test command (trailing =??) has been introduced to maintain backward compatibility for those commands whose subparameters changed the range of possible values from version to version.

• (for **#SELINT**=2 only)

The response to the Test Command (trailing =?) may be changed in the future by Telit to allow the description of new values/functionalities

• (for #SELINT = 2 only)

If all the subparameters of a parameter type command +CMD (or #CMD or \$CMD) are optional, issuing AT+CMD=<CR> (or AT#CMD=<CR> or AT\$CMD=<CR>) causes the OK result code to be returned and the previous values of the omitted subparameters to be retained.

3.2.1. String Type Parameters

A string, either enclosed between quotes or not, is considered to be a valid string type parameter input. According to V25.ter space characters are ignored on the command line and may be used freely for formatting purposes, unless they are embedded in numeric or quoted string constants; therefore a string containing a space character has to be enclosed between quotes to be considered a valid string type parameter (e.g. typing AT+COPS=1,0,"A1" is the same as typing AT+COPS=1,0,A1; typing AT+COPS=1,0,"A BB" is different from typing AT+COPS=1,0,A BB).

When **#SELINT=0 (or 1)** mode is selected, a string not enclosed between quotes is changed in upper case (e.g. **mickey** become **MICKEY**), while a string enclosed between quotes is case sensitive.

When **#SELINT=2** mode is selected, a string is always case sensitive.

A small set of commands requires always to write the input string parameters within quotes: this is explicitly reported in the specific descriptions.

3.2.2. Command Lines

A command line is made up of three elements: the **prefix**, the **body** and the **termination character**.

The **command line prefix** consists of the characters "**AT**" or "**at**", or, to repeat the execution of the previous command line, the characters "**A**/" or "**a**/" or **AT#**/ or **at#**/.

The **termination character** may be selected by a user option (parameter S3), the default being **<CR>**.

The basic structures of the command line are:

- ATCMD1<CR> where AT is the command line prefix, CMD1 is the body of a basic command (nb: the name of the command never begins with the character "+") and <CR> is the command line terminator character
- ATCMD2=10<CR> where 10 is a subparameter
- AT+CMD1;+CMD2=, ,10<CR> These are two examples of extended commands (nb: the name of the command always begins with the character "+"²). They are delimited with semicolon. In the second command the subparameter is omitted.
- +CMD1?<CR> This is a Read command for checking current subparameter values
- +CMD1=?<CR> This is a test command for checking possible subparameter values

These commands might be performed in a single command line as shown below:

ATCMD1 CMD2=10+CMD1;+CMD2=, ,10;+CMD1?;+CMD1=?<CR>

anyway it is always preferable to separate into different command lines the basic commands and the extended commands; furthermore it is suggested to avoid placing several action commands in the same command line, because if one of them fails, then an error message is received but it is not possible to argue which one of them has failed the execution.

If command V1 is enabled (verbose responses codes) and all commands in a command line has been performed successfully, result code <CR><LF>OK<CR><LF> is sent from the TA to the TE, if subparameter values of a command are not accepted by the TA or command itself is invalid, or command cannot be performed for some reason, result code <CR><LF>ERROR<CR><LF> is sent and no subsequent commands in the command line are processed.

If command V0 is enabled (numeric responses codes), and all commands in a command line has been performed successfully, result code 0<CR> is sent from the TA to the TE, if sub-parameter values of a command are not accepted by the TA or command itself is invalid, or command cannot be performed for some reason, result code 4<CR> and no subsequent commands in the command line are processed.

² The set of **proprietary AT commands** differentiates from the standard one because the name of each of them begins with either "@", "**#**", "**\$**" or "*". **Proprietary AT commands** follow the same syntax rules as **extended commands**

In case of errors depending on ME operation, **ERROR** (or 4) response may be replaced by +CME ERROR: <err> or +CMS ERROR: <err>.

NOTE:

The command line buffer accepts a maximum of 80 characters. If this number is exceeded none of the commands will be executed and TA returns **ERROR**.

3.2.2.1. ME Error Result Code - +CME ERROR: <err>

This is NOT a command, it is the error response to +Cxxx 3GPP TS 27.007 commands. Syntax: +CME ERROR: <err>

Parameter: **<err>** - error code can be either numeric or verbose (see **+CMEE**). The possible values of **<err>** are reported in the table:

Numeric Format	Verbose Format		
	General errors:		
0	phone failure		
1	No connection to phone		
2	phone-adaptor link reserved		
3	operation not allowed		
4	operation not supported

3.2.2.2. Message Service Failure Result Code - +CMS ERROR: <err>

This is NOT a command, it is the error response to +Cxxx 3GPP TS 27.005 commands.

Syntax: +CMS ERROR: <err>

Parameter: **<err>** - numeric error code.

The **<err>** values are reported in the table:

Numeric Format	Meaning
0127	GSM 04.11 Annex E-2 values
128255	3GPP TS 23.040 sub clause 9.2.3.22
	values
300	ME failure
301	SMS service of ME reserved
302	operation not allowed
303	operation not supported
304	invalid PDU mode parameter
305	invalid text mode parameter
310	SIM not inserted
311	SIM PIN required
312	PH-SIM PIN required

314	SIM busy
315	SIM wrong
316	SIM PUK required
317	SIM PIN2 required
318	SIM PUK2 required
320	memory failure

80000ST10025a Rev. 10 – 2011-02-17

Numeric Format	Meaning
321	invalid memory index
322	memory full
330	SMSC address unknown
331	no network service
332	network time-out
500	unknown error

3.2.3. Information Responses And Result Codes

The TA response, in case of verbose response format enabled, for the previous examples command line could be as shown below:

• information response to +CMD1?

<CR><LF>+CMD1:2,1,10<CR><LF>

information response to +CMD1=?

<CR><LF>+CMD1(0-2),(0,1),(0-15)<CR><LF>

final result code <CR><LF>OK<CR><LF>

Moreover there are other two types of result codes:

- *result code*s that inform about progress of TA operation (e.g. connection establishment **CONNECT**)
- *result code*s that indicate occurrence of an event not directly associated with issuance of a command from TE (e.g. ring indication **RING**).

Here the basic result codes according to ITU-T V25Ter recommendation

Result Codes		
Numeric form	Verbose form	
0	OK	
	CONNECT	
1	or	
	CONNECT <text>³</text>	
2	RING	
3	NO CARRIER	
4	ERROR	
5	CONNECT 1200 ⁴	

³ For SELINT 0,1 <text> is only "300"; for SELINT 2 <text> can be"300", "1200", "2400", "4800", "9600", "14400" or "1200/75"

Result Codes		
6	NO DIALTONE	
7	BUSY	
8	NO ANSWER	
10	CONNECT 2400 ⁴	
11	CONNECT 4800 ⁴	
12	CONNECT 9600 ⁴	
15	CONNECT 14400 ⁴	
23	CONNECT 1200/754	

3.2.4. **Command Response Time-Out**

Every command issued to the Telit modules returns a result response, if response codes are enabled (default). The time needed to process the given command and return the response varies, depending on the command type. Commands that do not interact with the SIM or the network, and only involve internal setups or readings, have an immediate response.Commands that interact with the SIM or the network could take many seconds to send a response, depending on SIM configuration (e.g., number of contacts stored in the phonebook, number of stored SMS), or on the network the command may interact with.

In the table below are listed only the commands whose interaction with the SIM or the network could lead to long response timings. When not otherwise specified, timing is referred to set command.

For phonebook and SMS writing and reading related commands, timing is referred to commands issued after phonebook sorting is completed.

For DTMF sending and dialling commands timing is referred to module registered on network ("AT+CREG?" answer is "+CREG: 0,1" or "+CREG: 0,5").

For Python commands, timing is referred to commands issued with module in idle, flash memory not full and not fragmented, and after the first Python command. The first Python command to be issued causes a system initialization that could last a couple of minutes. Baud rate is fixed at 115200.

Command	Estimated maximum time to get response (Seconds)	
+COPS	30 (test command)	
+CLCK	25 (SS operation) 5 (FDN enabling/disabling)	
+CLAC	5	
+CPWD	15 (SS operation) 5 (PIN modification)	
+CLIP	15 (read command)	
+CLIR	15 (read command)	

⁴ Valid for SELINT 0,1 only

page 24 of 604

3.2.5. Command Issuing Timing

The chain Command -> Response shall always be respected and a new command must not be issued before the module has terminated all the sending of its response result code (whatever it may be).

This applies especially to applications that "sense" the **OK** text and therefore may send the next command before the complete code **<CR><LF>OK<CR><LF>** is sent by the module.

It is advisable anyway to wait for at least 20ms between the end of the reception of the response and the issue of the next AT command.

If the response codes are disabled and therefore the module does not report any response to the command, then at least the 20ms pause time shall be respected.

During command mode, due to hardware limitations, under severe CPU load the serial port can loose some characters if placed in autobauding at high speeds. Therefore if you encounter this problem fix the baud rate with **+IPR** command.

3.3. Storage

3.3.1. Factory Profile And User Profiles

The Telit wireless modules stores the values set by several commands in the internal non volatile memory (NVM), allowing to remember this setting even after power off. In the NVM these values are set either as **factory profile** or as **user profiles**: there are **two customizable user profiles** and **one factory profile** in the NVM of the device: by default the device will start with user profile 0 equal to factory profile.

For backward compatibility each profile is divided into two sections, one **base section** which was historically the one that was saved and restored in early releases of code, and the **extended section** which includes all the remaining values.

The **&W** command is used to save the actual values of **both sections** of profiles into the NVM user profile.

Commands **&Y** and **&P** are both used to set the profile to be loaded at startup. **&Y** instructs the device to load at startup only the **base section**. **&P** instructs the device to load at startup the full profile: **base + extended sections**.

The **&F** command resets to factory profile values only the command of the base section of profile, while the **&F1** resets to factory profile values the full set of base + extended section commands.

The values set by other commands are stored in NVM outside the profile: some of them are stored always, without issuing any **&W**, some other are stored issuing specific

commands (+CSAS, #SLEDSAV, #VAUXSAV, #SKTSAV, #ESAV and \$GPSSAV); all of these values are read at power-up.

The values set by following commands are stored in the profile base section; if **#SELINT=2** they depend on the specific AT instance:

GSM DATA MODE	+CBST
AUTOBAUD	+IPR
COMMAND ECHO	E
RESULT MESSAGES	Q
VERBOSE MESSAGES	V
EXTENDED MESSAGES	Х
FLOW CONTROL OPTIONS	&K, +IFC
DSR (C107) OPTIONS	&S
DTR (C108) OPTIONS	&D
DCD (C109) OPTIONS	&C
RI (C125) OPTIONS	\R
POWER SAVING	+CFUN
DEFAULT PROFILE	&Y0
S REGISTERS	S0;S2;S3;S4;S5;S7;S12;S25;S30;S38
CHARACTER FORMAT	+ICF

The values set by following commands are stored in the profile extended section and, if the newer AT command interface style has been selected (see **#SELINT=2**), they depend on the specific AT instance (see **+CMUX**):

+ILRR	+DR
+CR	+CRLP
+CSNS	+CVHU
+CLIP	+CLIR
+CUSD	+CAOC
+CIND	+CMER
+CMEE	+CGREG
+CMGF	+CSDH
#QSS	#ACAL⁵
#ACALEXT	#ECAM
#MWI	#NITZ
#E2ESC	#STIA
#CESTHLCK	#CFL0
+CSDF	+CTZU
	+CR +CSNS +CLIP +CUSD +CIND +CMEE +CMGF #QSS #ACALEXT #MWI #E2ESC #CESTHLCK

⁵ If **#SELINT=2** they depend on the CMUX 0 instance only

⁶ It is partially stored in NVM, moreover only a part of it can depend on the specific **CMUX** instance; see command description.

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 26 of 604

+CAPD	+CCWE	+CSIL
+CTZR		

The values set by following commands are stored in the profile extended section and they don't depend on the specific AT instance (see **+CMUX**):

+CALM	+CRSL	+CMUT⁵
+CLVL ⁵	+VTD	+CSCB ⁷
#CAP⁵	#SRS⁵	#SRP⁵
#STM⁵	#DVI	#E2SMSRI
#DAC	#CODEC	#SHFEC⁵
#HFMICG ^₅	#HSMICG	#SHFSD⁵
#SPKMUT	#NITZ	#E2SLRI
#SIMDET	#TEMPMON ⁶	#PSEL
#HFRECG	#HSRECG	#SHFAGC
#SHSAGC	#SHSEC	#SHSNR
#SHFNR	#SHSSD	#TSVOL
#CPUMODE		

The values set by following commands are automatically stored in NVM, without issuing any storing command and independently from the profile (unique values), and are automatically restored at startup:

#SELINT	+COPS ⁸	+CGCLASS
+CGDCONT	+CGQMIN	+CGQREQ
#REGMODE	#PLMNODE	#COPSMODE
#DIALMODE	#BND	#AUTOBND
#ENS	#SCFG	#JDR
#ENHSIM	#AUTOATT	#TXMONMODE
#TTY	#ICMP	#GSMCONT
#NWSCANTMR	#SMSMODE	#DNS
#TCPMAXDAT	#TCPREASS	#SWLEVEL
#CPASMODE	#FASTCCID	+CGSMS
#V24M0DE		

The values set by following commands are stored in NVM on demand, issuing specific commands and independently from the profile:

+CSCA	+CSMP	+CSCB

stored by +CSAS[°] command and restored by +CRES[°] command

⁷ +CSCB is still stored in the profile extended section only for backward compatibility issues: its actual storing and restoring are accomplished issuing **+CSAS** and **+CRES**

⁸ It is partially stored in NVM; see command description.

3.5.1.1.3. Repeat Last Command - AT#/

AT#/ - Repeat Last C	ommand	SELINT 0 / 1 / 2
AT#/	The prefix is used to execute again the last received comr	mand.

3.5.2. General Configuration Commands

3.5.2.1. AT Interface Backward Compatibility

There are some slight modifications amongst the AT interfaces of Telit products. In order to keep backward compatibility and on the same time to give the opportunity to the customer to get competitor compatibility, Telit modules offer the specific command **#SELINT** to switch the behaviour of the device and its AT command interface. It is up to the user to select the AT interface he prefers.

The following table shows which AT commands interface can be applied and is default for the specific product:

Product	#SELINT=0	#SELINT=1	#SELINT=2
GT863-PY			•(default)
GT864-QUAD			•(default)
GT864-PY			•(default)

	code to be returned.	
Note	Issuing AT#SELINT= <v> when the ENS functionality</v>	y has been previously
	enabled (see #ENS) causes an ERROR result code	to be returned.
Note	Issuing AT#SELINT= <v> when the SMS Commands</v>	Operation Mode has
	been previously enabled (see <u>#SMSMODE</u>) causes a	an ERROR result code to
	be returned.	

3.5.3. Hayes Compliant AT Commands

3.5.3.1. Generic Modem Control

3.5.3.1.1. Set To Factory-Defined Configuration - &F

<mark>&F - Set To Fact</mark>	&F - Set To Factory-Defined Configuration SELINT 0 / 1 / 2		
AT&F[<value>]</value>	T&F[<value>]</value> Execution command sets the configuration parameters to default specified by manufacturer; it takes in consideration hardware con switches and other manufacturer-defined criteria.		
	Parameter: <value></value> : 0 - just the factory profile base section parameter 1 - either the factory profile base section and the considered (full factory profile).		
	Note: if parameter <value></value> is omitted, the comma behaviour as AT&F0	nd has the same	
Reference	V25ter.		

3.5.3.1.2. Soft Reset - Z

<mark>Z - Soft Reset</mark>	SELINT 0 / 1 / 2
ATZ[<n>]</n>	Execution command loads the base section of the specified user profile and the extended section of the default factory profile.
	Parameter:
	<n></n>
	01 - user profile number
	Note: any call in progress will be terminated.
	Note: if parameter <n></n> is omitted, the command has the same behaviour as ATZ0 .

80000ST10025a Rev. 10 - 2011-02-17

Z - Soft Reset		SELINT 0 / 1 / 2
Reference	V25ter.	

3.5.3.1.3. Select Active Service Class - +FCLASS

+FCLASS - Select Ac	+FCLASS - Select Active Service Class SELINT 0 / 1 / 2		
AT+FCLASS= <n></n>	Set command sets the wireless module in specified connection mode (data, fax, voice), hence all the calls done afterwards will be data or voice.		
	Parameter:		
	<n></n>		
	0 - data		
	1 - fax class 1		
	8 - voice		
AT+FCLASS?	Read command returns the current configuration value of t	the parameter	
	<n>.</n>		
AT+FCLASS=?	Test command returns all supported values of the paramet	ters <n></n> .	
Reference	3GPP TS 27.007		

3.5.3.1.4. Default Reset Basic Profile Designation - &Y

&Y - Default Rese	t Basic Profile Designation SELINT 0 / 1 / 2	
AT&Y[<n>]</n>	Execution command defines the basic profiles which will be loaded on startup.	
	Parameter:	
	<n> 01 - profile (default is 0): the wireless module is able to store 2 complete configurations (see &W).</n>	
	Note: differently from command Z<n></n> , which loads just once the desired profile, the one chosen through command &Y will be loaded on every startup.	
	Note: if parameter is omitted, the command has the same behaviour as AT&Y0	

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

3.5.3.1.5. Default Reset Full Profile Designation - &P

<mark>&P - Default Reset F</mark>	ull Profile Designation SELINT 0 / 1 / 3	
AT&P[<n>]</n>	Execution command defines which full profile will be loaded on startup.	
	Parameter:	
	<n> 01 – profile number: the wireless module is able to store 2 full configurations (see command &W).</n>	
	Note: differently from command Z<n></n> , which loads just once the desired profile, the one chosen through command &P will be loaded on every startup.	
	Note: if parameter is omitted, the command has the same behaviour as AT&P0	
Reference	Telit Specifications	

3.5.3.1.6. Store Current Configuration - &W

&W - Store Curren	t Configuration	SELINT 0 / 1 / 2
AT&W[<n>]</n>	AT&W[<n>] Execution command stores on profile <n> the complete configuent device.</n></n>	
Parameter: < n> 01 - profile		
	Note: if parameter is omitted, the command has the same AT&W0 .	behaviour of

3.5.3.1.7. Store Telephone Number - &Z

&Z - Store Telephone	&Z - Store Telephone Number In The Wireless Module Internal Phonebook SELINT 0 / 1 / 2		
AT&Z <n>=<nr></nr></n>	Execution command stores in the record <n></n> the telephone number <nr></nr> .		
	The records cannot be overwritten, they must be cleared before rewriting.		
	Parameters:		
	<n> - phonebook record</n>		
	<nr> - telephone number (string type)</nr>		
Note: the wireless module has a built in non volatile memory in w telephone numbers of a maximum 24 digits can be stored			
	Note: to delete the record <n></n> the command AT&Z<n>=<cr></cr></n> must be		

80000ST10025a Rev. 10 - 2011-02-17

&Z - Store Telephone	e Number In The Wireless Module Internal Phonebook	SELINT 0 / 1 / 2
	issued.	
	Note: the records in the module memory can be viewed wi &N , while the telephone number stored in the record <i>n</i> ca giving the command ATDS= < <i>n</i> >.	

3.5.3.1.8. Display Stored Numbers - &N

<mark>&N - Display Interna</mark>	al Phonebook Stored Numbers	SELINT 0 / 1 / 2
AT&N[<n>]</n>	Execution command returns the telephone number stored at the <n></n> position in the internal memory.	
	Parameter: < n> - phonebook record number Note: if parameter <n></n> is omitted then all the internal reco	rds are shown.

3.5.3.1.9. Manufacturer Identification - +GMI

+GMI - Manufacturer	Identification	SELINT 0 / 1 / 2
AT+GMI	Execution command returns the manufacturer identification.	
	Note: this is one of the commands whose output differs de last #SELINT setting.	pending on the
Reference	V.25ter	

3.5.3.1.10. Model Identification - +GMM

+GMM - Model Identi	fication	SELINT 0 / 1 / 2
AT+GMM	Execution command returns the model identification.	
Reference	V.25ter	

3.5.3.1.11. Revision Identification - +GMR

+GMR - Revision Identification SELINT 0 / 1 / 3				
AT+GMR	Execution command returns the software revision identific	ation.		
Reference	V.25ter			

80000ST10025a Rev. 10 - 2011-02-17

3.5.3.1.12. Capabilities List - +GCAP

+GCAP - Capabil	ities List	SELINT 0 / 1 / 2
AT+GCAP	Execution command returns the equipment support	ed command set list.
	Where:	
	+CGSM: GSM ETSI command set	
	+FCLASS: Fax command set	
	+DS: Data Service common modem command set	
	+MS: Mobile Specific command set	
Reference	V.25ter	

3.5.3.1.13. Serial Number - +GSN

+GSN - Serial Numbe	er	SELINT 0 / 1 / 2	
AT+GSN Execution command returns the device board serial number.			
	Note: The number returned is not the IMSI, it is only the bo	ard number	
Reference	V.25ter		

3.5.3.1.14. Display Configuration And Profile - &V

&V - Display Current	Base Configuration And Profile	SELINT 0 / 1 / 2
AT&V	Execution command returns some of the base conf parameters settings.	iguration

	<dec> - current value in decimal notation</dec>	

80000ST10025a Rev. 10 - 2011-02-17

&V3 - Extended S Registers Display	SELINT 0 / 1 / 2
<hex> - current value in hexadecimal notation</hex>	

3.5.3.1.18. Display Last Connection Statistics - &V2

&V2 - Display Last Connection Statistics							SI	ELII	<mark>NT 0 / 1 / 2</mark>
AT&V2	Execution	command	returns	the	last	connection	statistics	&	connection
	failure rea	son.							

3.5.3.1.19. Single Line Connect Message - \V

V - Single Line Conr	nect Message	SELINT 0 / 1 / 2		
AT\V <n></n>	execution command set single line connect message.			
	Parameter:			
	<n></n>			
	0 - off			
	1 - on			

3.5.3.1.20. Country Of Installation - +GCI

+GCI - Country Of Ir	Istallation	SELINT 0 / 1 / 2
AT+GCI= <code></code>	Set command selects the installation country code according to ITU-T.35 Annex A.	
	Parameter: <code></code>	
	59 - it currently supports only the Italy country code	
AT+GCI?	Read command reports the currently selected country co	de.
AT+GCI=?	Test command reports the supported country codes.	
Reference	V25ter.	

3.5.3.1.21. Line Signal Level - %L

<mark>%L - Line Signal Lev</mark> e	el	SELINT 0 / 1 / 2
AT%L	It has no effect and is included only for backward compatib	ility with landline
	modems	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 49 of 604

80000ST10025a Rev. 10 - 2011-02-17

3.5.3.1.22. Line Quality - %Q

%Q - Line Quality	SELINT 0 / 1 / 2
AT%Q	It has no effect and is included only for backward compatibility with landline
	modems

3.5.3.1.23. Speaker Loudness - L

L - Speaker Loudnes	5	SELINT 0 / 1 / 2
ATL <n></n>	It has no effect and is included only for backward compatib	ility with landline
	modems	

3.5.3.1.24. Speaker Mode - M

<mark>M - Speaker Mode</mark>		SELINT 0 / 1 / 2
ATM <n></n>	It has no effect and is included only for backward compatik	oility with landline
	modems	

3.5.3.1.25. Master Reset - +CMAR

+CMAR – Master Reset	SELINT 0 / 1
AT+CMAR=< phone lock code>	This command requests the MT to reset user data. The user data in the phone will be reset to default values.
	Parameters: < phone lock code> - string type representing an 8 digits security code. It must be verified before performing the master reset.
	Note: issuing the command will cause an NVM formatting. After the formatting is completed the module will automatically reboot.
	Note: the command is available for SELINT 0 and 1 only in 10.00.xx3 release and onwards.
AT+CMAR=?	Test command tests for command existence.

+CMAR - Master Reset	SELINT 2
AT+CMAR=< phone lock	This command requests the MT to reset user data. The user data in
code> the phone will be reset to default values.	
	Parameters:
	<pre>< phone lock code> - string type representing an 8 digits security</pre>

80000ST10025a Rev. 10 - 2011-02-17

	code. It must be verified before performing the master reset.	
	Note: issuing the command will cause an NVM formatting. After the formatting is completed the module will automatically reboot.	
AT+CMAR=?	Test command tests for command existence.	

3.5.3.2. DTE - Modem Interface Control

3.5.3.2.1. Command Echo - E

E - Command Echo	SELINT 0 / 1 / 2
ATE[<n>]</n>	Set command enables/disables the command echo.
	Parameter:
	<n></n>
	0 - disables command echo
1 - enables command echo (factory default) , hence command se device are echoed back to the DTE before the response is give	
	Note: if parameter is omitted, the command has the same behaviour of ATE0
Reference	V25ter

3.5.3.2.2. Quiet Result Codes - Q

Q - Quiet Result Cod	es	SELINT 0 / 1
ATQ[<n>]</n>	Set command enables or disables the result codes.	
	Parameter:	
	<n></n>	
	0 - enables result codes (factory default)	
	1 - every result code is replaced with a <cr></cr>	
	2 - disables result codes	
	Note: After issuing either ATQ1 or ATQ2 every information in response to commands is not affected	text transmitted
	Note: if parameter is omitted, the command has the sa	me behaviour as
Example	After issuing ATQ1	

80000ST10025a Rev. 10 - 2011-02-17

<mark>Q - Quiet Result</mark>	Codes SELINT 0 / 1
	AT+CGACT=? +CGACT: (0-1) a <cr> ends the response</cr>
	After issuing ATQ2
	AT+CGACT=? +CGACT: (0-1) nothing is appended to the response
Reference	V25ter
<mark>Q - Quiet Result</mark>	Codes SELINT 2
ATQ[<n>]</n>	Set command enables or disables the result codes.
	Parameter:
	<n></n>
	0 - enables result codes (factory default)
	1 - disables result codes
	2 - disables result codes (only for backward compatibility)
	Note: After issuing either ATQ1 or ATQ2 every information text transmitted in response to commands is not affected
	Note: if parameter is omitted, the command has the same behaviour of ATQ0
Example	After issuing ATQ1 or ATQ2
	AT+CGACT=?
	+CGACT: (0-1) nothing is appended to the response
Reference	V25ter

3.5.3.2.3. Response Format - V

<mark>V - Response Format</mark>		SELINT 0 / 1 / 2
ATV[<n>]</n>	et command determines the contents of the header and trailer transmitted th result codes and information responses. It also determines if result des are transmitted in a numeric form or an alphanumeric form (see 3.2.3 Information Responses And Result Codes] for the table of result des).	
Parameter: <n></n> 0 - limited headers and trailers and numeric forma		sult codes

3.5.3.3. Call Control

3.5.3.3.1. Dial - D

<mark>D – Dial</mark>	SELINT 0 / 1	
ATD <number>[;]</number>	Execution command starts a call to the phone number given as parameter. If ";" is present, a VOICE call to the given number is performed, regardless of the current value of the connection mode set by +FCLASS command.	
	Parameter: < number> - phone number to be dialed	
	Note: type of call (data, fax or voice) depends on last +FCLASS setting.	
	Note: the numbers accepted are 0-9 and *,#,"A", "B", "C", "D","+".	
	Note: for backwards compatibility with landline modems modifiers "T", "P", "R", ",", "W", "!", "@" are accepted but have no effect.	
ATD> <str>[;]</str>	Issues a call to phone number which corresponding alphanumeric field is <str></str> ; all available memories will be searched for the correct entry.	
	If ";" is present a voice call is performed.	
	Parameter:	
	<str> - alphanumeric field corresponding to phone number; it must be enclosed in quotation marks.</str>	

80000ST10025a Rev. 10 - 2011-02-17

<mark>D – Dial</mark>	SELINT 0 / 1
	Note: parameter <str></str> is case sensitive.
	Note: used character set should be the one selected with command Select TE character set +CSCS .
ATD> <mem<i>><n>[;]</n></mem<i>	Issues a call to phone number in phonebook memory storage <mem></mem> , entry location <n></n> (available memories may be queried with AT+CPBS=?). If ";" is present a voice call is performed.
	 Parameters: <mem> - phonebook memory storage; it must not be enclosed in quotation marks.</mem> SM - SIM phonebook FD - SIM fixed dialling-phonebook LD - SIM last-dialling-phonebook MC - device missed (unanswered received) calls list RC - ME received calls list
	<n> - entry location; it should be in the range of locations available in the memory used.</n>
ATD> <n>[;]</n>	Issues a call to phone number in entry location <n></n> of the active phonebook memory storage (see +CPBS). If ";" is present a voice call is performed.
	Parameter: <n> - active phonebook memory storage entry location; it should be in the range of locations available in the active phonebook memory storage.</n>
ATDL	Issues a call to the last number dialed.
ATDS= <nr>[;]</nr>	Issues a call to the number stored in the MODULE internal phonebook position number <nr></nr> . If ";" is present a VOICE call is performed.
	Parameter: < nr> - internal phonebook position to be called (See either &N and &Z)
ATD <number>l[;]</number>	Issues a call overwriting the CLIR supplementary service subscription
ATD <number>i[;]</number>	default value for this call If ";" is present a VOICE call is performed.
	I - invocation, restrict CLI presentation i - suppression, allow CLI presentation
ATD <number>G[;] ATD<number>g[;]</number></number>	Issues a call checking the CUG supplementary service information for the current call. Refer to +CCUG command.

+MS - Modulation Se	lection	SELINT 0 / 1 / 2
	connection. 0 - unspecified <max_rate></max_rate> - it specifies the highest value at which the DO a connection. 0 - unspecified 30014400 - rate in bps	CE may establish
AT+MS?	Note: to change modulation requested use +CBST comman Read command returns the current value of <carrier></carrier> , <a< b=""> <min_rate></min_rate>, <max_rate></max_rate> parameters.</a<>	
AT+MS=?	Test command returns all supported values of the <carrie< b=""> <min_rate></min_rate>, <max_rate></max_rate> parameters.</carrie<>	r>, <automode>,</automode>

3.5.3.4.2. Line Quality And Auto Retrain - %E

%E - Line Quality Mo	nitor And Auto Retrain Or Fallback/Fallforward	SELINT 0 / 1 / 2
AT%E <n></n>	Execution command has no effect and is included only for backward	
	compatibility with landline modems.	

3.5.3.5. Compression Control

3.5.3.5.1. Data Compression - +DS

+DS - Data Compress	sion SELI	<mark>NT 0 / 1 / 2</mark>
AT+DS=[<n>]</n>	Set command sets the V42 compression parameter.	
	Parameter:	
	<n></n>	
	0 - no compression, it is currently the only supported value; t has no effect, and is included only for backward compatib	
AT+DS?	Read command returns current value of the data compression par	ameter.
AT+DS=?	Test command returns all supported values of the parameter	<n></n>
Reference	V25ter	

3.5.3.5.2. Data Compression Reporting - +DR

+DR - Data Compres	sion Reporting	SELINT 0 / 1 / 2
AT+DR= <n></n>	Set command enables/disables the data compression repo connection.	rting upon

80000ST10025a Rev. 10 - 2011-02-17

+DR - Data Compress	sion Reporting	SELINT 0 / 1 / 2
	Parameter:	
	<n></n>	
	0 - data compression reporting disabled;	
	1 - data compression reporting enabled upon connection.	
	Note: if enabled, the following intermediate result code is t before the final result code:	transmitted
	+DR: <compression></compression>	
	(the only supported value for <compression></compression> is "NONE")	
AT+DR?	Read command returns current value of <n></n> .	
AT+DR=?	Test command returns all supported values of the parame	ter <n></n>
Reference	V25ter	

3.5.3.6. S Parameters

Basic commands that begin with the letter "S" are known as "S-Parameters". The number following the "S" indicates the "parameter number" being referenced. If the number is not recognized as a valid parameter number, an ERROR result code is issued.

If no value is given for the subparameter of an **S-Parameter**, an **ERROR** result code will be issued and the stored value left unchanged.

Note: what follows is a special way to select and set an **S-parameter**:

- ATS*n*<CR> selects *n* as current parameter number. If the value of *n* is in the range (0, 2, 3, 4, 5, 7, 10, 12, 25, 30, 38), this command establishes S*n* as last selected parameter. Every value out of this range and less than 256 can be used but has no meaning and is maintained only for backward compatibility with landline modems.
- 2. AT=<value><CR> or ATS=<value><CR> set the contents of the selected S-parameter

Example:

ATS7<CR> AT=40<CR> ATS=15<CR>

establishes **S7** as last selected parameter. sets the content of **S7** to 40 sets the content of **S7** to 15.

3. AT? returns the current value of the last S-parameter accessed

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

	at+creg?	
	+CREG: 0,1	
	ок	
Reference	3GPP TS 27.007	
Note	There are situations in which the presentation of the URC controlled by	
	+CREG is slightly different from ETSI specifications: e.g. it is possible to	
	have an excessive presentation of the URC +CREG: 4. We identified this	
	behaviour and decided to maintain it as default for backward compatibili	ŧv
	issues. It is indeed possible to avoid it simply issuing AT#REGMODE=1 (see
	#REGMODE): this puts the Operation Mode of Registration Status	
	Commands in 'Enhanced Registration Operation Mode' which is more	
	formal.

	<type> - type of address octet in integer format</type>	
	 128 - both the type of number and the numbering 129 - unknown type of number and ISDN/Telepho 145 - international type of number and ISDN/Tele (contains the character "+") 	ny numbering plan
	<alpha> - string type; alphanumeric representatio corresponding to the entry found in pho set should be the one selected with com character set +CSCS.</alpha>	nebook; used character
	<cli_validity></cli_validity>	
	0 - CLI valid	
	1 - CLI has been withheld by the originator.	
	2 - CLI is not available due to interworking proble originating network.	ems or limitation or
	Note: in the +CLIP: response they are currently no	
	subaddress information (it's always "" after the 2"	
	subaddress type information (it's always 128 after	r the 3'° comma)
	Note: issuing AT+CLIP<cr></cr> is the same as issuing	g the Read command.
	Note: issuing AT+CLIP= <cr> is the same as issuir AT+CLIP=0<cr>.</cr></cr>	ng the command

80000ST10025a Rev. 10 - 2011-02-17

+CLIP - Calling I	_ine Identification Presentation SELINT 0 / 1
AT+CLIP?	Read command returns the presentation status of the CLI in the format:
	+CLIP: <n>,<m></m></n>
	where:
	<n></n>
	0 - CLI presentation disabled
	1 - CLI presentation enabled
	<m> - status of the CLIP service on the GSM network</m>
	0 - CLIP not provisioned
	1 - CLIP provisioned
	2 - unknown (e.g. no network is present)
	Note: This command issues a status request to the network, hence it ma
	take a few seconds to give the answer due to the time needed to exchang
	data with it.
AT+CLIP=?	Test command returns the supported values of the parameter <n></n>
Reference	3GPP TS 27.007
Note	The command changes only the report behaviour of the device, it does no change CLI supplementary service setting on the network.

+CLIP - Calling Line	Identification Presentation SELINT 2
AT+CLIP=[<n>]</n>	Set command enables/disables the presentation of the CLI (Calling Line Identity) at the TE . This command refers to the GSM supplementary service CLIP (Calling Line Identification Presentation) that enables a called subscriber to get the CLI of the calling party when receiving a mobile terminated call.
	Parameters: <n> 0 - disables CLI indication (factory default) 1 - enables CLI indication</n>
	If enabled the device reports after each RING the response: +CLIP: <number>,<type>,"",128,<alpha>,<cli_validity></cli_validity></alpha></type></number>
	where: < number> - string type phone number of format specified by < type>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

80000ST10025a Rev. 10 - 2011-02-17

+CLIP - Calling Line	Identification Presentation SELINT 2
	<type> - type of address octet in integer format</type>
	128 - both the type of number and the numbering plan are unknown
	129 - unknown type of number and ISDN/Telephony numbering plan
	145 - international type of number and ISDN/Telephony numbering plan
	(contains the character "+")
	<alpha> - string type; alphanumeric representation of <number></number></alpha>
	corresponding to the entry found in phonebook; used character
	set should be the one selected with command Select TE character set +CSCS .
	<cli_validity></cli_validity>
	0 - CLI valid
	1 - CLI has been withheld by the originator.
	2 - CLI is not available due to interworking problems or limitation or
	originating network.
	Note: in the +CLIP: response they are currently not reported either the subaddress information (it's always "" after the 2 nd comma) and the
	subaddress type information (it's always 128 after the 3 rd comma)
AT+CLIP?	Read command returns the presentation status of the CLI in the format:
	+CLIP: <n>,<m></m></n>
	where:
	<n></n>
	0 - CLI presentation disabled
	1 - CLI presentation enabled
	<m> - status of the CLIP service on the GSM network</m>
	0 - CLIP not provisioned
	1 - CLIP provisioned
	2 - unknown (e.g. no network is present)
	Note. This command issues a status request to the network, hence it may
	Note: This command issues a status request to the network, hence it may take a few seconds to give the answer due to the time needed to exchange
	data with it.
AT+CLIP=?	Test command returns the supported values of parameter <n></n>
Reference	3GPP TS 27.007
Note	The command changes only the report behaviour of the device, it does not
	change CLI supplementary service setting on the network.

3.5.4.3.9. Calling Line Identification Restriction - +CLIR

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

80000ST10025a Rev. 10 - 2011-02-17

+CLIR - Calling Line	Identification Restriction SELINT 0 / 1
AT+CLIR[=[<n>]]</n>	Set command overrides the CLIR subscription when temporary mode is
	provisioned as a default adjustment for all following outgoing calls. This adjustment can be revoked by using the opposite command. This command refers to CLIR-service (GSM 02.81) that allows a calling subscriber to enable or disable the presentation of the CLI to the called party when originating a call.
	Parameter:
	<pre><n> - facility status on the Mobile</n></pre>
	0 - CLIR facility according to CLIR service network status
	1 - CLIR facility active (CLI not sent)
	2 - CLIR facility not active (CLI sent)
	Note: issuing AT+CLIR<cr></cr> is the same as issuing the Read command.
	Note: issuing AT+CLIR= <cr> is the same as issuing the command AT+CLIR=0<cr>.</cr></cr>
AT+CLIR?	Read command gives the default adjustment for all outgoing calls (<n></n>) and also triggers an interrogation of the provision status of the CLIR service (<m></m>), where
	<n> - facility status on the Mobile</n>
	0 - CLIR facility according to CLIR service network status
	1 - CLIR facility active (CLI not sent)
	2 - CLIR facility not active (CLI sent)
	<m> - facility status on the Network</m>
	0 - CLIR service not provisioned
	1 - CLIR service provisioned permanently

+CLIR - Calling Line	Identification Restriction SELINT 2
AT+CLIR=[<n>]</n>	Set command overrides the CLIR subscription when temporary mode is provisioned as a default adjustment for all following outgoing calls. This adjustment can be revoked by using the opposite command. This command refers to CLIR-service (GSM 02.81) that allows a calling subscriber to enable or disable the presentation of the CLI to the called party when originating a call.
	Parameter:
	<n> - facility status on the Mobile</n>
	0 - CLIR facility according to CLIR service network status
	1 - CLIR facility active (CLI not sent)
	2 - CLIR facility not active (CLI sent)
AT+CLIR?	Read command gives the default adjustment for all outgoing calls (<n>) and also triggers an interrogation of the provision status of the CLIR service (<m>), where</m></n>
	<n> - facility status on the Mobile</n>
	0 - CLIR facility according to CLIR service network status 1 - CLIR facility active (CLI not sent)
	2 - CLIR facility not active (CLI sent)
	<m> - facility status on the Network</m>
	0 - CLIR service not provisioned 1 - CLIR service provisioned permanently
	2 - unknown (e.g. no network present, etc.)
	3 - CLI temporary mode presentation restricted
	4 - CLI temporary mode presentation allowed
AT+CLIR=?	Test command reports the supported values of parameter <n></n> .
Reference	3GPP TS 27.007
Note	This command sets the default behaviour of the device in outgoing calls.

3.5.4.3.10. Call Forwarding Number And Conditions - +CCFC

+CCFC - Call Forwar	ding Number And Condition	SELINT 0 / 1 / 2

3.5.4.4.11. Clock Management - +CCLK

3.5.4.4.12.

+CCLK - Clock N	1anagement	SELINT 0 / 1
AT+CCLK	Set command sets the real-time clock of the ME.	
[= <time>]</time>		
	Parameter:	
	<time> - current time as quoted string in the format :</time>	
	"yy/MM/dd,hh:mm:ss±zz"	
	yy - year (two last digits are mandatory), range is 0099	
	MM - month (two last digits are mandatory), range is 01	12
	dd - day (two last digits are mandatory);	
	The range for dd(day) depends either on the month a	and on the year it
	refers to. Available ranges are:	
	(0128)	
	(0129)	
	(0130)	
	(0131)	
	Trying to enter an out of range value will raise an er	ror
	hh - hour (two last digits are mandatory), range is 0023	3

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 156 of 604

+CCLK - Clock Ma	anagement SELINT 0 / 1
	mm - minute (two last digits are mandatory), range is 0059 ss - seconds (two last digits are mandatory), range is 0059 ±zz - time zone (indicates the difference, expressed in quarter of an hour, between the local time and GMT; two last digits are mandatory), range is -47+48
	Note: If the parameter is omitted the behaviour of Set command is the same as Read command.
AT+CCLK?	Read command returns the current setting of the real-time clock, in the format <time></time> .
	Note: the three last characters of <time></time> are not returned by +CCLK? because the ME doesn't support time zone information.
AT+CCLK=?	Test command returns the OK result code.
Example	AT+CCLK="02/09/07,22:30:00+00" OK AT+CCLK? +CCLK: 02/09/07,22:30:25 OK

+CALA - Alarm Mana	gement	SELINT 0 / 1
AT+CALA[= <time>[,<n>[,<type> [,<text>[,<recurr> [,<silent>]]]]]</silent></recurr></text></type></n></time>	Set command stores in the internal Real Time Clock an alarm time with respective settings. It is possible to set up a recurrent alarm for one or more days in the week. Currently just one alarm can be set.	
	When the RTC time reaches the alarm time then the alarm behaviour of the MODULE depends upon the setting <type< b="">> was already ON at the moment when the alarm time had c</type<>	and if the device
	Parameters:	
	<time> - current alarm time as quoted string</time>	
	"" - (empty string) deletes the current alarm and resets a parameters to the "factory default" configuration	ll the +CALA
	"hh:mm:ss±zz" - format to be used only when issuing +C A	ALA with
	parameter <recurr></recurr> too.	
	"yy/MM/dd,hh:mm:ss±zz" - generic format: it's the same	as defined for

-C <mark>ALA - Al</mark> ar	<mark>m Management</mark>	SELINT 0 / 1
	+CCLK (see)	
	<n> - index of the alarm</n>	
	0 - The only value supported is 0.	
	<type> - alarm behaviour type</type>	
	0 - reserved for other equipment use.	
	1 - the MODULE simply wakes up fully operat	ive as if the ON/OFF button
	had been pressed. If the device is already O	
	does nothing (default).	
	2 - the MODULE wakes up in "alarm mode" if	at the alarm time it was off.
	otherwise it remains fully operative. In both	
	an unsolicited code every 3s:	
	+CALA: <text></text>	
	where <text></text> is the +CALA optional para	ameter previously set.
	The device keeps on sending the unsolicited	d code every 3s until a
	#WAKE or #SHDN command is received or	
	If the device is in "alarm mode" and it does	not receive the #WAKE
	command within 90 seconds then it shuts d	lown.
	3 - the MODULE wakes up in "alarm mode" if	at the alarm time it was off,
	otherwise it remains fully operative. In both	n cases the MODULE starts
	playing the alarm tone on the selected path	n for the ringer (see #SRP)
	The device keeps on playing the alarm tone	e until a #WAKE or #SHDN
	command is received or a 90 seconds time	r expires. If the device is in
	"alarm mode" and it does not receive the #	WAKE command within 90s
	then it shuts down.	
	4 - the MODULE wakes up in "alarm mode" if	at the alarm time it was off,
	otherwise it remains fully operative. In both	n cases the MODULE brings
	the pin GPIO6 high, provided its <direction< td=""><td>> has been set to alarm</td></direction<>	> has been set to alarm
	output, and keeps it in this state until a #W	AKE or #SHDN command is
	received or a 90 seconds timer expires. If the	ne device is in "alarm mode"
	and it does not receive the #WAKE comma	nd within 90s then it shuts
	down.	
	5 - the MODULE will make both the actions as	s for <type>=2 and <type>=3.</type></type>
	6 - the MODULE will make both the actions as	s for <type>=2 and <type>=4.</type></type>
	7 - the MODULE will make both the actions as	
	<text> - unsolicited alarm code text string. It h</text>	
	equal to 2 or 5 or 6.	
	<pre><recurr> - string type value indicating day of v</recurr></pre>	veek for the alarm in one of
	the following formats:	
	"<17>[,<17>[,]]" - it sets a recurrent alar	m for one or more days in the

+CALA - Alarm M	anagement SELINT 0 / 1
<u>+CALA - Alarm M</u>	 week; the digits 1 to 7 corresponds to the days in the week (Monday is 1). "0" - it sets a recurrent alarm for all days in the week. <silent> - integer type indicating if the alarm is silent or not.</silent> 0 - the alarm will not be silent; 1 - the alarm will be silent. During the "alarm mode" the device will not make any network scan and will not register to any network and therefore is not able to dial or receive any call or SMS, the only commands that can be issued to the MODULE in this state are the #WAKE and #SHDN, every other command must not be issued during this state.
	Note: If the parameter is omitted the behavior of Set command is the same as Read command.
AT+CALA?	Read command returns the list of current active alarm settings in the ME, in the format: [+CALA: <time>,<n>,<type>,[<text>],<recurr>,<silent>]</silent></recurr></text></type></n></time>
	Note: if no alarm is present a <cr><lf></lf></cr> is issued.
AT+CALA=?	Test command returns the list of supported index values (currently just 0), alarm types and maximum length of the text to be displayed, in the format:
	+CALA: (list of supported <n>s),(list of supported <type>s),<tlength></tlength></type></n>
	where:
	<n> and <type> as before <tlength> - maximum <text> field length, integer type</text></tlength></type></n>
	Note: an enhanced version of Test command has been defined, AT+CALA=??, providing the range of available values for <rlenght> and <silent> too.</silent></rlenght>
AT+CALA=??	Test command returns the list of supported index values (currently just 0), alarm types, maximum length of the text to be displayed, maximum length of <recurr></recurr> and supported <silent></silent> s, in the format:

	code; if there is a change of the network cell, it is issue	d the unsolicited
	result code:	
	+CGREG: <stat>[,<lac>,<ci>]</ci></lac></stat>	
	where:	
	<stat> - registration status (see above for values)</stat>	
	<lac> - location area code in hexadecimal format (e.g. '</lac>	"00C3" equals 195
	in decimal)	
	<pre><ci> - cell ID in hexadecimal format.</ci></pre>	
AT+CGREG?	Read command returns the status of result code presenta the integer <stat></stat> which shows whether the network has o the registration of the terminal in the format:	
	00050	
	+CGREG: <n>,<stat></stat></n>	
AT+CGREG=? Reference	Test command returns supported values for parameter <n< td=""><td> ></td></n<>	>
	3GPP TS 27.007	
Note	There are situations in which the presentation of the URC	•
	+CGREG is slightly different from ETSI specifications. We i behaviour and decided to maintain it as default for backwa	
	issues. It is indeed possible to avoid it simply issuing AT#F	
	#REGMODE): this puts the Operation Mode of Registration	
	Commands in 'Enhanced Registration Operation Mode'	
	formal.	

3.5.4.7.5. Define PDP Context - +CGDCONT

+CGDCONT - Define	PDP Context	SELINT 0 / 1
AT+CGDCONT[=	Set command specifies PDP context parameter values for a	a PDP context
[<cid></cid>	identified by the (local) context identification parameter, <cid></cid>	
[, <pdp_type></pdp_type>		

+CGDCONT - Define	PDP Context SELINT	<mark>0 / 1</mark>
[, <apn></apn>	Parameters:	
[, <pdp_addr></pdp_addr>	<cid> - (PDP Context Identifier) numeric parameter which specifies a</cid>	
[, <d_comp></d_comp>	particular PDP context definition.	
[, <h_comp></h_comp>	1 <i>max</i> - where the value of <i>max</i> is returned by the Test command	
[, <pd1></pd1>	<pdp_type> - (Packet Data Protocol type) a string parameter which</pdp_type>	
[,[,pdN]]]]]]]	specifies the type of packet data protocol	
	"IP" - Internet Protocol	
	APN> - (Access Point Name) a string parameter which is a logical	name
	that is used to select the GGSN or the external packet data	
	network. If the value is empty ("") or omitted, then the subs	scription
	value will be requested.	
	PDP_addr> - a string parameter that identifies the terminal in the	address
	space applicable to the PDP. The allocated address n	nay be
	read using the +CGPADDR command.	
	<d_comp> - numeric parameter that controls PDP data compression</d_comp>	n
	0 - off (default if value is omitted)	
	1 - on	
	<h_comp> - numeric parameter that controls PDP header compres</h_comp>	sion
	0 - off (default if value is omitted)	
	1 - on	
	<pd1>,, <pdn> - zero to N string parameters whose meanings are</pdn></pd1>	
	specific to the <pdp_type></pdp_type>	
	Note: a special form of the Set command, +CGDCONT=<cid></cid> , causes the	
	values for context number <cid></cid> to become undefined.	
	Note: issuing AT+CGDCONT<cr></cr> is the same as issuing the Read	
	command.	
	Note: issuing AT+CGDCONT=<cr></cr> returns the OK result code.	
AT+CGDCONT?	Read command returns the current settings for each defined contex	t in the
	format:	
	+CGDCONT: <cid>,<pdp_type>,<apn>,<pdp_addr>,<d_comp>,</d_comp></pdp_addr></apn></pdp_type></cid>	
	<h_comp>[,<pd1>[,[,pdN]]]<cr><lf>[<cr><lf>+CGDCONT:</lf></cr></lf></cr></pd1></h_comp>	
	<cid>,<pdp_type>,<apn>,<pdp_addr>,<d_comp>,<h_comp></h_comp></d_comp></pdp_addr></apn></pdp_type></cid>	
	[, <pd1>[,[,pdN]]]<cr><lf>[]]</lf></cr></pd1>	
AT+CGDCONT=?	Test command returns values supported as a compound value	
Example	AT+CGDCONT=1, "IP", "APN", "10.10.10.10", 0, 0 OK	
	AT+CGDCONT?	
	+CGDCONT: 1, "IP", "APN", "10.10.10.10", 0, 0	

+CGDCONT - Define PDP Context		SELINT 0 / 1
	OK AT+CGDCONT=? +CGDCONT: (1-5),"IP",,,(0-1),(0-1) OK	
Reference	3GPP TS 27.007

3.5.4.7.8. PDP Context - +CGACT

+CGACT - PDP Context Activate Or Deactivate SELINT 0 / 1		
AT+CGACT[=	Execution command is used to activate or deactivate the specified PDP	
[<state>[,<cid> [,<cid>[,]]]]]</cid></cid></state>	context(s)	
	Parameters:	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 192 of 604

+CGACT - PDP Co	ontext Activate Or Deactivate SELINT 0 / 1
	<state></state> - indicates the state of PDP context activation 0 - deactivated 1 - activated <cid></cid> - a numeric parameter which specifies a particular PDP context definition (see +CGDCONT) Note: if no <cid></cid> s are specified the activation/deactivation form of the command activates/deactivates all defined contexts. Note: issuing AT+CGACT<cr></cr> is the same as issuing the Read command. Note: issuing AT+CGACT=<cr></cr> returns the OK result code.
AT+CGACT?	Read command returns the current activation state for all the defined PDP contexts in the format: +CGACT: <cid>,<state><cr><lf>[<cr><lf>+CGACT: <cid>,<state><cr><lf>[]]</lf></cr></state></cid></lf></cr></lf></cr></state></cid>
AT+CGACT=?	Test command reports information on the supported PDP context activation states parameters in the format: +CGACT: (0-1)
Example	AT+CGACT? +CGACT: 1,1 OK AT+CGACT=1,1 OK
Reference	3GPP TS 27.007

+CGACT - PDP Cont	ext Activate Or Deactivate	SELINT 2
AT+CGACT= [<state>[,<cid> [,<cid>[,]]]]</cid></cid></state>	Execution command is used to activate or deactivate the specified PDP context(s)	
	Parameters: <state></state> - indicates the state of PDP context activation 0 - deactivated 1 - activated	
	<cid> - a numeric parameter which specifies a particular P definition (see +CGDCONT command)</cid>	
	Note: if no <cid></cid> s are specified the activation/deactivation to command activates/deactivates all defined contexts.	form of the
AT+CGACT?	Read command returns the current activation state for all t	the defined PDP

80000ST10025a Rev. 10 - 2011-02-17

+CGACT - PDP Conte	xt Activate Or Deactivate	SELINT 2
	contexts in the format:	
	+CGACT: <cid>,<state>[<cr><lf>+CGACT: <cid>,<state></state></cid></lf></cr></state></cid>	»[]]
AT+CGACT=?	Test command reports information on the supported PDP of	context activation
	states parameters in the format:	
	+CGACT: (0,1)	
Example	AT+CGACT=1,1	
	OK	
	AT+CGACT?	
	+CGACT: 1,1	
	ОК

3.5.4.7.9. Show PDP Address - +CGPADDR

+CGPADDR - Show	PDP Address SELINT 0 / 1	
AT+CGPADDR=	Execution command returns a list of PDP addresses for the specified	
[<cid>[,<cid></cid></cid>	context identifiers in the format:	
[,]]]		
	+CGPADDR: <cid>[,<pdp_addr>]<cr><lf>[<cr><lf></lf></cr></lf></cr></pdp_addr></cid>	
	+CGPADDR: <cid>[,<pdp_addr>]<cr><lf>[]]</lf></cr></pdp_addr></cid>	
	Parameters:	
	<cid> - a numeric parameter which specifies a particular PDP context</cid>	
	definition (see +CGDCONT command). If no <cid></cid> is specified, the	
	addresses for all defined contexts are returned.	
	PDP_addr> - a string that identifies the terminal in the address space	
	applicable to the PDP. The address may be static or dynamic	2.
	For a static address, it will be the one set by the +CGDCONT	
	command when the context was defined. For a dynamic	
	address it will be the one assigned during the last PDP	
	context activation that used the context definition referred to	2

+CGPADDR - Show	PDP Address SELINT 0 / 1
	by <cid></cid> ; if no address is available the <pdp_addr></pdp_addr> parameter is not shown
AT+CGPADDR=?	Test command returns a list of defined <cid></cid> s.
Example	AT#GPRS=1 +IP: xxx.yyy.zzz.www OK AT+CGPADDR=1 +CGPADDR: 1,"xxx.yyy.zzz.www" OK AT+CGPADDR=? +CGPADDR: (1) OK
Reference	3GPP TS 27.007

+CGPADDR - Show P	DP Address	SELINT 2
AT+CGPADDR= [<cid>[,]]]</cid>	Execution command returns a list of PDP addresses for th context identifiers in the format: +CGPADDR: <cid>,<pdp_addr>[<cr><lf>+CGPADDR: < <pdp_addr>[]] Parameters: <cid> - a numeric parameter which specifies a particular F definition (see +CGDCONT command). If no <cid> is addresses for all defined contexts are returned. <pdp_addr> - a string that identifies the terminal in the a applicable to the PDP. The address may be For a static address, it will be the one set by command when the context was defined. For address it will be the one assigned during the context activation that used the context defined by <cid>; if no address is available the emp represented as <pdp_addr></pdp_addr></cid></pdp_addr></cid></cid></pdp_addr></lf></cr></pdp_addr></cid>	e specified ccid>, PDP context specified, the ddress space static or dynamic. y the +CGDCONT or a dynamic he last PDP inition referred to
AT+CGPADDR=?	Test command returns a list of defined <cid></cid> s.	
Example	AT#GPRS=1 +IP: xxx.yyy.zzz.www OK AT+CGPADDR=1 +CGPADDR: 1,"xxx.yyy.zzz.www"	

80000ST10025a Rev. 10 - 2011-02-17

+CGPADDR - Show PDP Address		SELINT 2
	OK AT+CGPADDR=? +CGPADDR: (1)	
	OK	
Reference	3GPP TS 27.007	

3.5.4.7.10. Enter Data State - +CGDATA

+CGDATA - Enter Dat	ta State SELINT 0 / 1
AT+CGDATA=	Execution command causes to perform whatever actions are necessary to
[<l2p>,[<cid></cid></l2p>	establish a communication with the network using one or more GPRS PDP
[, <cid>[,]]]]</cid>	types.
	Parameters:
	<l2p> - string parameter that indicates the layer 2 protocol to be used "PPP" - PPP Point-to-point protocol</l2p>
	<cid> - numeric parameter which specifies a particular PDP context</cid>
	definition (see +CGDCONT command).
	Note: if parameter <l2p></l2p> is omitted, the layer 2 protocol is unspecified
AT+CGDATA=?	Test command reports information on the supported layer 2 protocols.
	Note: the representation format of the Test command output is not included
	in parenthesis
Example	AT+CGDATA=? +CGDATA: "PPP"
	TCGDATA: PPP
	OK
	AT+CGDATA="PPP",1
	CONNECT
Reference	3GPP TS 27.007

+CGDATA - Enter Da	ta State	SELINT 2
AT+CGDATA= [<l2p>,[<cid> [,<cid>[,]]]]</cid></cid></l2p>	Execution command causes to perform whatever actions establish a communication with the network using one o types.	
	Parameters: <l2p></l2p> - string parameter that indicates the layer 2 proto "PPP" - PPP Point-to-point protocol <cid></cid> - numeric parameter which specifies a particular b definition (see +CGDCONT command).	

80000ST10025a Rev. 10 – 2011-02-17

+CGDATA - Enter Data State SELINT 2		
	Note: if parameter <l2p></l2p> is omitted, the layer 2 prote	ocol is unspecified
AT+CGDATA=?	Test command reports information on the supported	layer 2 protocols.
Example	AT+CGDATA=? +CGDATA: ("PPP") OK AT+CGDATA="PPP",1 CONNECT	
Reference	3GPP TS 27.007	

3.5.4.7.11. Modify PDP context - +CGCMOD

+CGCMOD – Modify PDP context SELINT 2		
AT+CGCMOD=[<cid1> [,<cid2>[,,<cidn>]]]</cidn></cid2></cid1>	The execution command is used to modify the specified PDP context(s) with respect to QoS profiles. If no <cid< b=""> is specified the command modifies all active contexts.</cid<>	
	Parameters: < cid <i>i</i> >: a numeric parameter which specifies a particular PDP context	
AT+CGCMOD=?	Test command returns a list of <cid></cid> s associated with active contexts.	

3.5.4.8. Commands For Battery Charger

3.5.4.8.1. Battery Charge - +CBC

+CBC - Battery Charg	je	SELINT 0 / 1
AT+CBC	Execution command returns the current Battery Charge st	atus in the
	format:	
	+CBC: <bcs>,<bcl></bcl></bcs>	
	where:	
	0 - ME is powered by the battery	
	1 - ME has a battery connected, and charger pin is being p	powered
	2 - ME does not have a battery connected	
	3 - Recognized power fault, calls inhibited	
	<pre><bcl> - battery charge level, only if <bcs>=0</bcs></bcl></pre>	
	0 - battery is exhausted, or ME does not have a battery co	nnected

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

+CBC - Battery C	harge	SELINT 0 / 1	
,	25 - battery charge remained is estimated to be 25%		
	50 - battery charge remained is estimated to be 50%		
	75 - battery charge remained is estimated to be 75%		
	100 - battery is fully charged.		
	Note: <bcs>=1</bcs> indicates that the battery charger supply i battery is being recharged if necessary with it. Supply for taken anyway from VBATT pins.		
	Note: without battery/power connected on VBATT pins or fault the unit is not working, therefore values <bcs>=2</bcs> ar never appear.	•	
	Note: <bcl> indicates battery charge level only if battery i charger is not connected</bcl>	s connected and	
AT+CBC?	Read command has the same effect as Execution comma	and.

Note	The ME does not make differences between being power	, ,	
	by a power supply on the VBATT pins, so it is not pos between these two cases.	sible to distinguish	
Deference	3GPP TS 27.007		
Reference	JUFF 15 21.00/		

+ CBC - Battery Char	ge SELINT 2
AT+CBC	Execution command returns the current Battery Charge status in the
	format:

80000ST10025a Rev. 10 - 2011-02-17

+ CBC - Battery	Charge SELINT 2
	+CBC: <bcs>,<bcl></bcl></bcs>
	 where: bcs> - battery status 0 - ME is powered by the battery 1 - ME has a battery connected, and charger pin is being powered 2 - ME does not have a battery connected 3 - Recognized power fault, calls inhibited bcl> - battery charge level, only if <bcs>=0</bcs> 0 - battery is exhausted, or ME does not have a battery connected 25 - battery charge remained is estimated to be 25% 50 - battery charge remained is estimated to be 50% 75 - battery charge remained is estimated to be 75% 100 - battery is fully charged.
	Note: <bcs></bcs> =1 indicates that the battery charger supply is inserted and the battery is being recharged if necessary with it. Supply for ME operations is taken anyway from VBATT pins.
	Note: without battery/power connected on VBATT pins or during a power fault the unit is not working, therefore values <bcs>=2</bcs> and <bcs>=3</bcs> will never appear.
	Note: <bcl> indicates battery charge level only if battery is connected and charger is not connected</bcl>
AT+CBC=?	Test command returns parameter values supported as a compound value.
	+CBC: (0-3),(0-100)
	Note: although +CBC is an execution command, ETSI 07.07 requires the Test command to be defined.
Example	AT+CBC +CBC: 0,75 OK
Note	The ME does not make differences between being powered by a battery or by a power supply on the VBATT pins, so it is not possible to distinguish between these two cases.

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

3.5.5. 3GPP TS 27.005 AT Commands for SMS and CBS

3.5.5.1. General Configuration

3.5.5.1.1. Select Message Service - +CSMS

+CSMS - Select Mes	sage Service SELINT 0 / 1
AT+CSMS	Set command selects messaging service <service>. It returns the types of</service>
[= <service>]</service>	messages supported by the ME :
	Parameter:
	<service></service>
	0 - The syntax of SMS AT commands is compatible with GSM 27.005 (factory default)
	Set command returns current service setting along with the types of
	messages supported by the ME:
	+CSMS: <service>,<mt>,<mo>,<bm></bm></mo></mt></service>
	where:
	<pre><mt> - mobile terminated messages support</mt></pre>
	0 - type not supported
	1 - type supported
	<mo> - mobile originated messages support</mo>
	0 - type not supported
	1 - type supported
	 bm> - broadcast type messages support
	0 - type not supported
	1 - type supported
	Note: If parameter is omitted then the behavior of Set command is the same
AT+CSMS?	as Read command.
AT+CSM5?	Read command reports current service setting along with supported
	message types in the format:
	+CSMS: <service>,<mt>,<mo>,<bm></bm></mo></mt></service>
	where:
	<pre><service> - messaging service (see above)</service></pre>
	<pre><mt> - mobile terminated messages support (see above)</mt></pre>
	<mo> - mobile originated messages support (see above)</mo>
	 shows - broadcast type messages support (see above)

80000ST10025a Rev. 10 - 2011-02-17

+CSMS - Select N	Aessage Service SELINT 0 / 1
AT+CSMS=?	Test command reports a list of all services supported by the device. The
	supported value of the parameter <service></service> .
Reference	GSM 27.005; 3GPP TS 23.040; 3GPP TS 23.041
+CSMS - Select N	Aessage Service SELINT 2
AT+CSMS=	Set command selects messaging service <service>. It returns the types of</service>
<service></service>	messages supported by the ME :
	Parameter:
	<service></service>
	0 - The syntax of SMS AT commands is compatible with GSM 27.005 (factory default)
	Set command returns the types of messages supported by the $\ensuremath{\textbf{ME}}$:
	+CSMS: <mt>,<mo>,<bm></bm></mo></mt>
	where:
	<mt> - mobile terminated messages support</mt>
	0 - type not supported
	1 - type supported
	<mo> - mobile originated messages support</mo>
	0 - type not supported
	1 - type supported
	bm> - broadcast type messages support
	0 - type not supported 1 - type supported
AT+CSMS?	Read command reports current service setting along with supported
	message types in the format:
	+CSMS: <service>,<mt>,<bm></bm></mt></service>
	where:
	<service> - messaging service (see above)</service>
	<mt> - mobile terminated messages support (see above)</mt>
	<mo> - mobile originated messages support (see above)</mo>
	<pre></pre>
AT+CSMS=?	Test command reports the supported value of the parameter <service></service> .

3.5.5.1.2. Preferred Message Storage - +CPMS

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

+CPMS - Preferr	ed Message Storage	SELINT 0 / 1
AT+CPMS[=	Set command selects memory storages <memr>, <mer< td=""><td>nw> and <mems></mems> to</td></mer<></memr>	nw> and <mems></mems> to
<memr></memr>	be used for reading, writing, sending and storing SMs.	
[, <memw></memw>		
[, <mems>]]]</mems>	Parameters:	
	<memr> - memory from which messages are read and</memr>	deleted
	"SM" - SIM SMS memory storage	
	"ME" - ME internal storage	
	<memw> - memory to which writing and sending operations "SM" - SIM SMS memory storage</memw>	tions are made
	<mems> - memory to which received SMs are preferred "SM" - SIM SMS memory storage</mems>	to be stored
	The command returns the memory storage status in the	format:
	+CPMS: <usedr>,<totalr>,<usedw>,<totalw>,<useds>,</useds></totalw></usedw></totalr></usedr>	<totals></totals>
	where <usedr> - number of SMs stored into <memr> <totalr> - max number of SMs that <memr> can contain <usedw> - number of SMs stored into <memw> <totalw> max number of SMs that <memw> can contain <useds> - number of SMs stored into <mems> <totals> - max number of SMS that <mems> can contain</mems></totals></mems></useds></memw></totalw></memw></usedw></memr></totalr></memr></usedr>	1
	Note: The only supported memory storage for writing the SIM internal memory "SM", so <memw>=<mems>=</mems></memw>	-
	Note: the received class 0 SMS are stored in the "ME" the <mems></mems> setting and they are automatically deleted	, ,
	Note: If all parameters are omitted the behavior of S same as Read command.	Set command is the
AT+CPMS?	Read command reports the message storage status in t	he format:
	+CPMS: <memr>,<usedr>,<totalr>,<memw>,<usedw> <mems>,<useds>,<totals></totals></useds></mems></usedw></memw></totalr></usedr></memr>	
	where <memr></memr> , <memw></memw> and <mems></mems> are the selecter for reading, writing and storing respectively.	d storage memories
AT+CPMS=?	Test command reports the supported values for pa <memw> and <mems></mems></memw>	rameters <memr></memr> ,

+CPMS - Preferred M	lessage Storage	SELINT 0 / 1
Example	AT+CPMS? +CPMS: "SM",5,10,"SM",5,10,"SM",5,10	
	OK you have 5 out of 10 SMS SIM posi	tions occupied
Reference	GSM 27.005	

+CPN	<mark>/S - Preferred M</mark> e	essage Storage SELINT 2
Note	: the behaviour of	command +CPMS differs depending on whether or not the improved SMS
comr	mands operation n	node has been enabled (see #SMSMODE)
		(#SMSMODE=0)
#	AT+CPMS=	Set command selects memory storages <memr>, <memw> and</memw></memr>
S	<memr></memr>	<mems> to be used for reading, writing, sending and storing SMs.</mems>
Μ	[, <memw></memw>	
S	[, <mems>]]</mems>	Parameters:
Μ		<memr> - memory from which messages are read and deleted</memr>
0		"SM" - SIM SMS memory storage
D		"ME" - ME internal storage
Е		<memw> - memory to which writing and sending operations are</memw>
=		made
0		"SM" - SIM SMS memory storage
		<mems> - memory to which received SMs are preferred to be stored</mems>
		"SM" - SIM SMS memory storage
#		The command returns the memory storage status in the format:
S		
Μ		+CPMS: <usedr>,<totalr>,<usedw>,<totalw>,<useds>,<totals></totals></useds></totalw></usedw></totalr></usedr>
S		
М		where:
0		<usedr> - number of SMs stored into <memr></memr></usedr>

3.5.6.2. Transmission/Reception Control

3.5.6.2.1. Stop Transmission And Pause - +FTS

+FTS - Stop Transmi	+FTS - Stop Transmission And Pause SELINT 0 / 1 /	
AT+FTS= <time></time>	Execution command causes the modem to terminate a transmission and wait for <time> 10ms intervals before responding with OK result. Parameter: <time> - duration of the pause, expressed in 10ms intervals.</time></time>	
AT+FTS=?	0255 Test command returns all supported values of the param	eter <time></time> .
	Note: test command result is without command echo	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

3.5.6.2.2. Wait For Receive Silence - +FRS

+FRS - Wait For Reco	+FRS - Wait For Receive Silence SELINT 0 / 1 / 2	
AT+FRS= <time></time>	Execution command causes the modem to listen and report OK when silence has been detected for the specified period of time. This command will terminate when the required silence period is detected or when the DTE sends another character other than XON or XOFF . Parameter: <time> - amount of time, expressed in 10ms intervals. 0255</time>	
AT+FRS=?	Test command returns all supported values of the parameter <time></time> . Note: test command result is without command echo.	
Reference	ITU T.31 and TIA/EIA-578-A specifications

3.5.6.2.3. Transmit Data Modulation - +FTM

<mark>+FTM - Transmit Da</mark>	+FTM - Transmit Data Modulation SELINT 0 / 1	
AT+FTM= <mod></mod>	AT+FTM=<mod></mod> Execution command causes the module to transmit facsimile data usin modulation defined by the parameter <mod></mod> .	
	Parameter: <mod></mod> - carrier modulation 24 - V27ter/2400 bps 48 - V27ter/4800 bps 72 - V29/7200 bps 96 - V29/9600 bps	
AT+FTM=?	Test command returns all supported values of the parameter <mod></mod> . Note: the output is not bracketed and without command echo.	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

+FTM - Transmit Data	a SELINT 2
AT+FTM= <mod></mod>	Execution command causes the module to transmit facsimile data using the modulation defined by the parameter <mod></mod> .
	Parameter: <mod></mod> - carrier modulation 24 - V27ter/2400 bps 48 - V27ter/4800 bps 72 - V29/7200 bps
	96 - V29/9600 bps
AT+FTM=?	Test command returns all supported values of the parameter <mod></mod> . Note: test command result is without command echo.

AT+FRM= <mod></mod>	Execution command causes the module to receive facsim modulation defined by the parameter <mod></mod> .	ile data using the
	Parameter: <mod></mod> - carrier modulation 24 - V27ter/2400 bps 48 - V27ter/4800 bps 72 - V29/7200 bps 96 - V29/9600 bps	
AT+FRM=?	Test command returns all supported values of the parame Note: test command result is without command echo.	ter <mod></mod> .
Reference	ITU T.31 and TIA/EIA-578-A specifications	

3.5.6.2.5. Transmit Data With HDLC Framing - +FTH

+FTH - Transmit Da	ata With HDLC Framing	SELINT 0 / 1 / 2	
AT+FTH= <mod></mod>	Execution command causes the module to transmit facsimile data using HDLC protocol and the modulation defined by the parameter <mod></mod> .		
	Parameter: <mod></mod> - carrier modulation 3 - V21/300 bps		
AT+FTH=?	Test command returns all supported values of the param	neter <mod></mod> .	

80000ST10025a Rev. 10 - 2011-02-17

+FTH - Transmit Data With HDLC Framing		SELINT 0 / 1 / 2
	Note: test command result is without command echo.	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

3.5.6.2.6. Receive Data With HDLC Framing - +FRH

+FRH - Receive Data	With HDLC Framing SELI	INT 0 / 1 / 2
AT+FRH= <mod></mod>	Execution command causes the module to receive facsimile HDLC protocol and the modulation defined by the parameter <m< b=""></m<>	-
	Parameter: <mod> - carrier modulation 3 - V21/300 bps</mod>	
AT+FRH=?	Test command returns all supported values of the parameter <r< b=""> Note: test command result is without command echo.</r<>	mod>.
Reference	ITU T.31 and TIA/EIA-578-A specifications	

3.5.6.3. Serial Port Control

3.5.6.3.1. Select Flow Control - +FLO

80000ST10025a Rev. 10 - 2011-02-17

+FLO - Select Flow	Control Specified By Type SELINT 0 / 1 / 2
AT+FLO= <type></type>	Set command selects the flow control behaviour of the serial port in both directions: from DTE to DTA and from DTA to DTE. Parameter: <type> - flow control option for the data on the serial port 0 - flow control None 1 - flow control Software (XON-XOFF) 2 - flow control Hardware (CTS-RTS) – (factory default) Note: This command is a shortcut of the +IFC command. Note: +FLO's settings are functionally a subset of &K's ones.</type>
AT+FLO?	Read command returns the current value of parameter <type></type> Note: If flow control behavior has been set with AT&Kn command with the parameter that is not allowed by AT+FLO the read command AT+FLO? will return: +FLO: 0
AT+FLO=?	Test command returns all supported values of the parameter <type></type> . Note: test command result is without command echo.
Reference	ITU T.31 and TIA/EIA-578-A specifications

3.5.6.3.2. Serial Port Rate - +FPR

+FPR - Select Serial	Port Rate SELINT 0 / 1 / 2
AT+FPR= <rate></rate>	Set command selects the the serial port speed in both directions, from DTE to DTA and from DTA to DTE. When autobauding is selected, then the speed is detected automatically.
	Parameter: < rate> - serial port speed selection 0 – autobauding
	Note: it has no effect and is included only for backward compatibility with landline modems
AT+FPR?	Read command returns the current value of parameter <rate></rate>
AT+FPR=?	Test command returns all supported values of the parameters <rate></rate> . Note: test command result is without command echo.

3.5.6.3.3. Double Escape Character Replacement - +FDD

+FDD - Double Escap	<mark>e Character Replacement Control</mark>	SELINT 0 / 1 / 2
AT+FDD= <mode></mode>	Set command concerns the use of the <dle></dle> consecutive escape characters (<10h><10h>) in user data. Parameter	pair to encode
	<pre><mode> 0 - currently the only available value. The DCE decode of either <dle><dle> or discard. The DCE encode o <dle><dle><dle><</dle></dle></dle></dle></dle></mode></pre>	
AT+FDD?	Read command returns the current value of parameter < m	ode>
AT+FDD=?	Test command returns all supported values of parameter < Note: test command result is without command echo.	mode>.
Reference	ITU T.31 and TIA/EIA-578-A specifications	

3.5.7. Custom AT Commands

3.5.7.1. General Configuration AT Commands

3.5.7.1.1. Network Selection Menu Availability - +PACSP

+PACSP - Network	Selection Menu Availability SELINT 2	
AT+PACSP?	Read command returns the current value of the <mode></mode> parameter in format:	
	+PACSP <mode></mode>	
	where: <mode> - PLMN mode bit (in CSP file on the SIM) 0 - restriction of menu option for manual PLMN selection. 1 - no restriction of menu option for Manual PLMN selection.</mode>	
AT+PACSP=?	Test command returns the OK result code.	
Note	The command is available only if the ENS functionality has been previou enabled (see #ENS)	ısly

3.5.7.1.2. Manufacturer Identification - #CGMI

#CGMI - Manufactur	er Identification	SELINT 0 / 1	
AT#CGMI	Execution command returns the device manufacturer i	dentification co	de

80000ST10025a Rev. 10 - 2011-02-17

#CGMI - Manufactur	er Identification	SELINT 0 / 1
	with command echo. The output depends on the choic #SELINT command.	ce made through
AT#CGMI?	Read command has the same effect as the Execution comr	nand

#CGMI - Manufactur	er Identification	SELINT 2
AT#CGMI	Execution command returns the device manufacturer iden command echo. The output depends on the choice made the command.	
AT#CGMI=?	Test command returns the OK result code.	

3.5.7.1.3. Model Identification - #CGMM

#CGMM - Model Identification SEI			
AT#CGMM	Execution command returns the device model identification code wi	ith	
	command echo.		
AT#CGMM?	Read command has the same effect as the Execution command		

#CGMM - Model Identification SELINT 2		
AT#CGMM Execution command returns the device model identification code with		n code with
	command echo.	
AT#CGMM=?	Test command returns the OK result code.	

3.5.7.1.4. Revision Identification - #CGMR

#CGMR - Revision Identification SELINT 0 / 1			
	Execution command returns device software revision number with command echo.		
AT#CGMR?	Read command has the same effect as the Execution command		

#CGMR - Revision Identification SELINT 2		SELINT 2
AT#CGMR	Execution command returns device software revision numl echo.	per with command
AT#CGMR=?	Test command returns the OK result code.	

3.5.7.1.5. Product Serial Number Identification - #CGSN

#CGSN - Product Ser	SELINT 0 / 1	
AT#CGSN	Execution command returns the product serial number,	identified as the
	IMEI of the mobile, with command echo.	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 282 of 604

80000ST10025a Rev. 10 - 2011-02-17

#CGSN - Product Serial Number Identification SELINT 0 / 1			
AT#CGSN?	Read command has the same effect as the Execution command		
#CGSN - Product Serial Number Identification SELINT 2			
AT#CGSN	Execution command returns the product serial number, ide	entified as the IME	
	of the mobile, with command echo.		
AT#CGSN=?	Test command returns the OK result code.		

3.5.7.1.6. International Mobile Subscriber Identity (IMSI) - #CIMI

#CIMI - International Mobile Subscriber Identity (IMSI) SELINT 0 / 1		
AT#CIMI	Execution command returns the international mobile subscriber identity,	
	identified as the IMSI number, with command echo.	
AT#CIMI?	Read command has the same effect as the Execution command	

#CIMI - International Mobile Subscriber Identity (IMSI) SELINT 2		
AT#CIMI	Execution command returns the international mobile subscriber identity,	
	identified as the IMSI number, with command echo.	
AT#CIMI=?	Test command returns the OK result code.	

3.5.7.1.7. Read ICCID (Integrated Circuit Card Identification) - #CCID

#CCID - Read ICCID	SELINT 2	
AT#CCID	Execution command reads on SIM the ICCID (card identification number	
	that provides a unique identification number for the SIM)	
AT#CCID=?	Test command returns the OK result code.	

3.5.7.1.8. Service Provider Name - #SPN

#SPN - Service Prov	ider Name SELINT 2
AT#SPN	Execution command returns the service provider string contained in the SIM field SPN , in the format:
	#SPN: <spn></spn>
	 where: <spn> - service provider string contained in the SIM field SPN, represented in the currently selected character set (see +CSCS).</spn> Note: if the SIM field SPN is empty, the command returns just the OK result code.
AT#SPN=?	Test command returns the OK result code.

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

3.5.7.1.9. Extended Numeric Error report - #CEER

#CEER – Extend	<mark>ed numeric error</mark>	report SELINT 2	
AT#CEER		command causes the TA to return a numeric code in the for	mat
	#CEER: <c< th=""><th>ode></th><th></th></c<>	ode>	
	which shou	Ild offer the user of the TA a report of the reason for	
		re in the last unsuccessful call setup (originating or	
	answeri	5	
		call release;	
		unsuccessful GPRS attach or unsuccessful PDP context	
	activatio	on; GPRS detach or PDP context deactivation.	
	Note: if nor	ne of the previous conditions has occurred since power up t	hen
		ed (i.e. No error , see below)	ien
	<code> val</code>	ues as follows	
	Value	Diagnostic

80000ST10025a Rev. 10 - 2011-02-17

<mark>#CEERNET –</mark> Ext	error report for Network reject cause SELINT 2
	Note: causes 15, 41 to 46 are not considered for R98 products(GSM 04.08).
AT#CEERNET=?	Test command returns OK result code.
Reference	GSM 24.008 for REL4 and GSM 04.08 for R98

3.5.7.1.11. Select Registration Operation Mode - #REGMODE

#REGMODE – Select	Registration Operation ModeSELINT 2
AT#REGMODE= <mode></mode>	There are situation operation node There are situations in which the presentation of the URCs controlled by either +CREG and +CGREG are slightly different from ETSI specifications. We identified this behaviour and decided to maintain it as default for backward compatibility issues, while we're offering a more formal 'Enhanced Operation Mode' through #REGMODE. Set command sets the operation mode of registration status commands. Parameter: <mode> - operation mode of registration status commands 0 - basic operation mode (default for all products, except GE865-QUAD and GE864-DUAL V2) 1 - enhanced operation mode (default for GE865-QUAD and GE864-DUAL V2)</mode>
AT#REGMODE?	Read command returns the current registration operation mode.
AT#REGMODE=?	Test command reports the available range of values for parameter < mode >
Note	The affected commands are +CREG and +CGREG

3.5.7.1.12. SMS Commands Operation Mode - #SMSMODE

#SMSMODE - SMS Commands Operation Mode		SELINT 2	
AT#SMSMODE=	Set command enables/disables the improved SMS commands operation		

80000ST10025a Rev. 10 - 2011-02-17

#SMSMODE - SMS	Commands Operation Mode	SELINT 2
<mode></mode>	mode	
	Parameter: <mode></mode> - SMS commands operation mode 0 - disable improved SMS commands operation r products, except GE865-QUAD and GE864-DUAL V 1 - enable improved SMS commands operation r QUAD and GE864-DUAL V2)	/2)
AT#SMSMODE?	Read command reports whether the improved SM mode is enabled or not, in the format:	S commands operation
	#SMSMODE: <mode></mode>	
	(<mode> described above)</mode>	
AT#SMSMODE=?	Test command reports the supported range of val < mode >	ues for parameter
Note	The SMS commands affected by #SMSMODE are: +CMGW, +CMGL, +CMGR, +CMGD, +CSMP	+CPMS, +CNMI, +CMGS,

3.5.7.1.13. PLMN List Selection - #PLMNMODE

#PLMNMODE - PLM	N List Selection	SELINT 0 / 1 / 2
AT#PLMNMODE= [<plmnlist>]</plmnlist>	Set command selects the list of PLMN names to be used c	urrently
	 Parameter: <plmnlist> - list of PLMN names</plmnlist> 0 - PLMN names list, currently used in commands like +O is fixed and depends upon currently selected interface (default for all products, except GE865-QUAD and GE86 1 - PLMN names list is not fixed and can be updated in ne versions (default for GE865-QUAD and GE864-DUAL V2) 	(see #SELINT) 4-DUAL V2) wer software
	Note: < plmnlist > parameter is saved in NVM	
AT#PLMNMODE?	Read command reports whether the currently used list of I fixed or not, in the format:	PLMN names is
	<pre>#PLMNMODE: <plmnlist> (<plmnlist> described above)</plmnlist></plmnlist></pre>	
AT#PLMNMODE=?	Test command returns the supported range of values for p <plmnlist></plmnlist> .	arameter

80000ST10025a Rev. 10 - 2011-02-17

3.5.7.1.14. Display PIN Counter - #PCT

#PCT - Display	PIN Counter SELINT 0 / 1
AT#PCT	Execution command reports the PIN/PUK or PIN2/PUK2 input remaining attempts, depending on +CPIN requested password in the format:
#PCT: <n> where:</n>	
	<n> - remaining attempts 0 - the SIM is blocked.</n>
	13 - if the device is waiting either SIM PIN or SIM PIN2 to be given. 110 - if the device is waiting either SIM PUK or SIM PUK2 to be given.
AT#PCT?	Read command has the same behaviour as Execution command.

#PCT - Display PIN	Counter	SELINT 2
AT#PCT	AT#PCT Execution command reports the PIN/PUK or PIN2/PUK2 input remaini attempts, depending on +CPIN requested password in the format: #PCT: <n></n>	
	where:	
	<n> - remaining attempts</n>	
	0 - the SIM is blocked.	
	13 - if the device is waiting either SIM PIN or SIM PIN2 to	o be given.
	110 - if the device is waiting either SIM PUK or SIM PUK	2 to be given.
AT#PCT=?	Test command returns the OK result code.	

3.5.7.1.15. Software Shut Down - #SHDN

#SHDN - Software Sh	nutdown	SELINT 0 / 1
AT#SHDN	Execution command causes device detach from the network and shut down. Before definitive shut down an OK response is returned.	
	Note: after the issuing of this command any previous activity is terminated and the device will not respond to any further command.	
	Note: to turn it on again Hardware pin ON/OFF must be tied	d low.
AT#SHDN?	Read command has the same behaviour as Execution comm	mand.

#SHDN - Software S	hutdown	SELINT 2
AT#SHDN	Execution command causes device detach from the network and shut	
	down. Before definitive shut down an OK response is returned.	

80000ST10025a Rev. 10 - 2011-02-17

#SHDN - Software SI	nutdown	SELINT 2
Note: after the issuing of this command any previous activity is terminated and the device will not respond to any further command.		ty is terminated
	Note: to turn it on again Hardware pin ON/OFF must be tied	d low.
AT#SHDN=?	Test command returns the OK result code.	

3.5.7.1.16. Extended Reset - #Z

<mark>#Z – Extended reset</mark>		SELINT 2
AT#Z= <profile></profile>	Set command loads both base section and extended secti specified user profile stored with AT&W and selected with Parameter <profile> 0 – user profile 0 1 – user profile 1</profile>	
AT#Z=?	Test command tests for command existence.	

3.5.7.1.17. Periodic Reset - #ENHRST

#ENHRST – Periodic ReSe		SELINT 2
AT#ENHRST= <mod>[,<del< th=""><th>Set command enables/disables the unit reset after ·</th><th><delay></delay></th></del<></mod>	Set command enables/disables the unit reset after ·	<delay></delay>
ay>]	minutes.	
	Parameters: <mod> 0 – disables the unit reset (factory default) 1 – enables the unit reset only for one time 2 – enables the periodic unit reset <delay> - time interval after that the unit reboots; r minutes</delay></mod>	numeric value in
	Note: the settings are saved automatically in NVM o mod is 2. Any change from 0 to 1 or from 1 to 0 is no	-
	Note: the particular case AT#ENHRST=1,0 causes the module reboot. In this case if AT#ENHRST=1,0 follow	

80000ST10025a Rev. 10 - 2011-02-17

#ENHRST – Periodic ReSe	ſ	SELINT 2
	command that stores some parameters in NVM, it is	s recommended
	to insert a delay of at least 5 seconds before to issue	9
	AT#ENHRST=1,0, to permit the complete NVM storing.	
AT#ENHRST?	Read command reports the current parameter setti	ngs for #
	EHNRST command in the format:	
	# EHNRST: < mod >[, <delay>,<remaintime>]</remaintime></delay>	
	<remaintime> - time remaining before next reset</remaintime>	
AT#ENHRST=?	Test command reports supported range of values fo	r parameters
	<mod> and <delay>.</delay></mod>	
Examples	AT#ENHRST=1,60	
	Module reboots after 60 minutes	
	AT#ENHRST=1,0	
	Module reboots now	
	AT#ENHRST=2,60	
	Module reboots after 60 minutes and after every following power on	indefinitely

3.5.7.1.18. Wake From Alarm Mode - #WAKE

#WAKE - Wake From	Alarm Mode	SELINT 0 / 1
AT#WAKE[= <opmode>]</opmode>	Execution command stops any eventually present alarm a module is in alarm mode , it exits the alarm mode and er operating mode .	
Parameter: <opmode></opmode> - operating mode; any input is possible: no control is m the <opmode></opmode> value, although it is mandatory to have it; the m exits the alarm mode , enters the normal operating mode , any activity is stopped (e.g. alarm tone playing) and an OK result of returned.		e it; the module node , any alarm
	Note: if parameter is omitted, the command returns the o of the device in the format:	perating status

80000ST10025a Rev. 10 - 2011-02-17

#WAKE - Wake Fro	m Alarm Mode	SELINT 0 / 1
	#WAKE: <status></status>	
	where:	
	<status></status>	
	0 - normal operating mode	
	1 - alarm mode or normal operating mode wit	h some alarm activity.
	Note: the alarm mode is indicated by status ON of status ON of pin DSR , the power saving status is and DSR - OFF status; the normal operating status ON .	indicated by a CTS - OFF
	Note: during the alarm mode the device will not and will not register to any network and therefor receive any call or SM, the only commands the MODULE in this state are the #WAKE and #SHD must not be issued during this state.	at can be issued to the
AT#WAKE?	Read command has the same effect as Exe parameter is omitted.	cution command when
AT#WAKE=?	Test command returns OK result code.	

#WAKE - Wake From	Alarm Mode SELINT 2
AT#WAKE=	Execution command stops any eventually present alarm activity and, if the
[<opmode>]</opmode>	module is in alarm mode , it exits the alarm mode and enters the normal
	operating mode.
	Parameter:
	<opmode> - operating mode</opmode>
	0 - normal operating mode; the module exits the alarm mode, enters the normal operating mode, any alarm activity is stopped (e.g. alarm tone playing) and an OK result code is returned.
	Note: the alarm mode is indicated by status ON of hardware pin CTS and by status ON of pin DSR ; the power saving status is indicated by a CTS - OFF and DSR - OFF status; the normal operating status is indicated by DSR - ON .
	Note: during the alarm mode the device will not make any network scan and will not register to any network and therefore is not able to dial or receive any call or SM, the only commands that can be issued to the MODULE in this state are the #WAKE and #SHDN , every other command
	must not be issued during this state.

80000ST10025a Rev. 10 - 2011-02-17

#WAKE - Wake F	rom Alarm Mode	SELINT 2
AT#WAKE?	Read command returns the operating status of t	he device in the format:
	#WAKE: <status></status>	
	where: <status></status>	
	0 - normal operating mode 1 - alarm mode or normal operating mode wi	ith some alarm activity.
AT#WAKE=?	Test command returns OK result code.	

3.5.7.1.19. Query Temperature Overflow - #QTEMP

#QTEMP - Query Ten	nperature Overflow	SELINT 0 / 1	
AT#QTEMP	Set command has currently no effect. The interpretati	ion of parameter	
[= <mode>]</mode>	<mode> is currently not implemented.</mode>		
	Note: if parameter <mode></mode> is omitted the behaviour of Set command is the same as Read command		
	Note: Only <mode>=0</mode> is accepted.		
AT#QTEMP?	Read command queries the device internal temperature sensor for over temperature and reports the result in the format:		
	#QTEMP: <temp> where</temp>		
	<temp> - over temperature indicator</temp>		
	0 - the device temperature is in the <i>working range</i>		
	1 - the device temperature is out of the <i>working range</i>		
	Note: typical <i>temperature working range</i> is (-10°C+55°C); strongly recommended to consult the "Hardware User Gui real temperature working range of your module		
#QTEMP=?	Test command reports supported range of values for parar	meter <mode></mode> .	
Note	The device should not be operated out of its <i>temperature</i> temperature is out of range proper functioning of the devic	working range; if	

#QTEMP - Query Tem	nperature Overflow	SELINT 2
AT#QTEMP=	Set command has currently no effect. The interpretation of	f parameter
[<mode>]</mode>	<mode> is currently not implemented: any value assigned to it will simply</mode>	
	have no effect.	

80000ST10025a Rev. 10 – 2011-02-17

#QTEMP - Query	Temperature Overflow SELINT 2
AT#QTEMP?	Read command queries the device internal temperature sensor for over temperature and reports the result in the format: #QTEMP: <temp></temp> where <temp></temp> - over temperature indicator 0 - the device temperature is in the <i>working range</i> 1 - the device temperature is out of the <i>working range</i> Note: typical <i>temperature working range</i> is (-10°C+55°C); anyway you are strongly recommended to consult the "Hardware User Guide" to verify the real temperature working range of your module
#QTEMP=?	Test command reports supported range of values for parameter <mode></mode> .
Note	The device should not be operated out of its <i>temperature working range</i> , elsewhere proper functioning of the device is not ensured.

3.5.7.1.20. Temperature Monitor - #TEMPMON

#TEMPMON - Tempe	#TEMPMON - Temperature Monitor SELINT 2		
AT#TEMPMON= <mod></mod>	Set command sets the behaviour of the module internal te monitor.	mperature	
[, <urcmode> [,<action></action></urcmode>	Parameters:		
[, <hyst_time> [,<gpio>]]]]</gpio></hyst_time>	<pre><mod> 0 - sets the command parameters. 1 - triggers the measurement of the module internal tem reporting the result in the format: #TEMPMEAS: <level>,<value></value></level></mod></pre>	perature,	
	where: <level></level> - threshold level -2 - extreme temperature lower bound (see Note) -1 - operating temperature lower bound (see Note) 0 - normal temperature 1 - operating temperature upper bound (see Note) 2 - extreme temperature upper bound (see Note)		

page 295 of 604

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

<value> - actual temperature expressed in Celsius degrees.</value>
<i>Setting of the following optional parameters has meaning only if <mod>=0</mod></i>
<urcmode> - URC presentation mode.</urcmode>
 0 - it disables the presentation of the temperature monitor URC 1 - it enables the presentation of the temperature monitor URC, whenever the module internal temperature reaches either operating or extreme levels; the unsolicited message is in the format:
#TEMPMEAS: <level>,<value></value></level>
where:
<level> and <value> are as before</value></level>
 <action> - sum of integers, each representing an action to be done whenever the module internal temperature reaches either operating or extreme levels (default is 0). If <action> is not zero, it is mandatory to set the <hyst_time> parameter too.</hyst_time></action></action> 07 - as a sum of:
0 - no action 1 - automatic shut-down when the temperature is beyond the extreme bounds 2 - RF TX circuits automatically disabled (using +CFUN=2) when
operating temperature bounds are reached. When the temperature is back to normal the module is brought back to the previous state, before RF TX disabled.
 4 - the output pin <gpio> is tied HIGH when operating temperature bounds are reached; when the temperature is back to normal the output pin <gpio> is tied LOW. If this <action> is required, it is mandatory to set the <gpio> parameter too.</gpio></action></gpio></gpio>
<hr/> <hyst_time> - hysteresis time: all the actions happen only if the extreme or operating bounds are maintained at least for this period. This parameter is needed and required if <action> is not zero. 0255 - time in seconds</action></hyst_time>
GPIO> - GPIO number. valid range is "any output pin" (see "Hardware User's Guide"). This parameter is needed and required only if action>=4 is required.
Note: the URC presentation mode <urcmode></urcmode> is related to the current AT

80000ST10025a Rev. 10 - 2011-02-17

	nstance only (see +cmux); last <urcmode> settings are saved for every nstance as extended profile parameters, thus it is possible to restore them either if the multiplexer control channel is released and set up, back and forth. Note: last <action>, <hyst_time> and <gpio> settings are saved in NVM too, but they are not related to the current CMUX instance only (see +cmux).</gpio></hyst_time></action></urcmode>		
AT#TEMPMON?	Read command reports the current parameter settings for #TEMPMON command in the format: #TEMPMON: <urcmode>,<action>[,<hyst_time>[,<gpi0>]]</gpi0></hyst_time></action></urcmode>		
AT#TEMPMON=?	Test command reports the supported range of values for parameters <mod>, <urcmode>, <action>, <hyst_time> and <gpio></gpio></hyst_time></action></urcmode></mod>		
Note	In the following table typical temperature bounds are represented; anyway you are strongly recommended to consult the "Hardware User Guide" to verify the real temperature bounds for your module.		
	Extreme Temperature Lower Bound ^(*) T _{ext_low}		
	Operating Temperature Lower Bound ⁽⁺⁾ T _{op_low}		
	Operating Temperature		
	Operating Temperature Upper Bound ^(*)		
	Extreme Temperature Upper Bound ⁽⁺⁾ T _{ext_up}		

3.5.7.1.21. Set General Purpose Output - #SGPO

#SGPO - Set General	Purpose Output	SELINT 0 / 1
AT#SGPO[=	Set command sets the value of the general purpose output pin GPI02 .	
[<stat>]]</stat>		
	Parameter:	
	<stat></stat>	
	0 - output pin cleared to 0 (Low)	
	1 - output pin set to 1 (High)	
	Note: the GPIO2 is an OPEN COLLECTOR output, the co transistor base level, hence the open collector output is ne AT#SGPO=0 sets the open collector output High

80000ST10025a Rev. 10 - 2011-02-17

<mark>#SGPO - Set Gene</mark>	ral Purpose Output	SELINT 0 / 1
	AT#SGP0=1 sets the open collector output Low	
	A pull up resistor is required on pin GPIO2 .	
	Note: issuing AT#SGPO<cr></cr> is the same as issuing the Read command.	
	Note: issuing AT#SGP0= <cr> is the same as iss AT#SGP0=0<cr>.</cr></cr>	suing the command
AT#SGP0?	Read command reports the #SGP0 command setting	, hence the opposite
	status of the open collector pin in the format:	
	#SGPO: <stat>.</stat>	
AT#SGP0=?	Test command reports the supported range of values o	f parameter <stat></stat> .
Note	This command is meaningful only for GM862 family	

3.5.7.1.22. General Purpose Input - #GGPI

#GGPI - General Pur	pose Input	SELINT 0 / 1
AT#GGPI[=[<dir>]]</dir>	Set command sets the general purpose input pin GPI01 .	
	Parameter: <dir> - auxiliary input GPI01 setting 0 - the Read command AT#GGPI? reports the logic inpu GPI01 pin.</dir>	ut level read from
	Note: The device has an insulated input pin (the input goes the base of an internal decoupling transistor) which can be used as a logic general purpose input. This command sets the read behaviour for this pin, since only direct read report is supported, the issue of this command is not needed. In future uses the behavior of the read input may be more complex.	
	Note: If parameter is omitted then the behaviour of Set command is the same as Read command	
AT#GGPI?	Read command reports the read value for the input p format:	oin GPI01, in the
	#GGPI: <dir>,<stat></stat></dir>	
	where < dir> - direction setting (see #GGPI=<dir></dir>) < stat> - logic value read from pin GPI01	

80000ST10025a Rev. 10 – 2011-02-17

#GGPI - General Pur	pose Input	SELINT 0 / 1
	Note: Since the reading is done after the insulating trans value is the opposite of the logic status of the GPI01 input	•
AT#GGPI=?	Test command reports supported range of values for par	ameter <dir></dir> .
Note	This command is meaningful only for GM862 family	

3.5.7.1.23. General Purpose Input/Output Pin Control - #GPIO

#GPIO - General Pur	pose Input/Output Pin Control	SELINT 0/1/2
#GPIO - General Pur AT#GPIO=[<pin>, <mode>[,<dir>]]</dir></mode></pin>	 pose Input/Output Pin Control Execution command sets the value of the general purpose GPIO<pin> according to <dir> and <mode> parameter.</mode></dir></pin> Not all configurations for the three parameters are valid. Parameters: <pin> - GPIO pin number; supported range is from 1 to a vaoon the hardware.</pin> <mode> - its meaning depends on <dir> setting:</dir></mode> 0 - no meaning if <dir>=0 - INPUT</dir> output pin cleared to 0 (Low) if <dir>=1 - OUTPUT</dir> no meaning if <dir>=2 - ALTERNATE FUNCTION</dir> no meaning if <dir>=3 - TRISTATE PULL DOWN</dir> 1 - no meaning if <dir>=2 - ALTERNATE FUNCTION</dir> no meaning if <dir>=3 - TRISTATE PULL DOWN</dir> 2 - Reports the read value from the input pin if <dir>=0 - INPUT</dir> Reports a no meaning value if <dir>=2 - ALTERNATE PULL DOWN</dir> 2 - Reports a no meaning value if <dir>=3 - TRISTATE PULL DOWN</dir> 2 - Reports a no meaning value if <dir>=3 - TRISTATE PULL DOWN</dir> 2 - Reports a no meaning if <dir>=3 - TRISTATE PULL DOWN</dir> 2 - Reports a no meaning value if <dir>=3 - TRISTATE PULL DO</dir> <dir>= 0 - INPUT</dir> no meaning if <dir>=3 - TRISTATE PULL DOWN</dir> 2 - Reports a no meaning value if <dir>=2 - ALTERNATE FUNCTION</dir> a no meaning if <dir>=3 - TRISTATE PULL DO</dir> 	output pin alue that depends INPUT OUTPUT FUNCTION
	Note: when <mode>=2</mode> (and <dir></dir> is omitted) the command direction and value of pin GPIO<pin></pin> in the format: #GPIO: <dir>,<stat></stat></dir>	d reports the

80000ST10025a Rev. 10 - 2011-02-17

<mark>#GPIO - General</mark>	Purpose Input/Output Pin Control SELINT 0/1/2
	 where: <dir> - current direction setting for the GPIO<pin></pin></dir> <stat> logic value read from pin GPIO<pin> in the case the pin <dir> is set to input;</dir></pin> logic value present in output of the pin GPIO<pin> in the case the pin <dir> is currently set to output;</dir></pin> no meaning value for the pin GPIO<pin> in the case the pin <dir> is set to alternate function or Tristate pull down</dir></pin> </stat> Note: "ALTERNATE FUNCTION" value is valid only for following pins: GPI04 - alternate function is "RF Transmission Control" GPI05 - alternate function is "Alarm Output" (see +CALA)
	GPI07 - alternate function is "Buzzer Output" (see #SRP) Note: while using the pins in the alternate function, the GPIO read/write access to that pin is not accessible and shall be avoided. <i>For GM862 family products only</i>
	 GPI01 is input only and GPI02 is output only. since the GPI01 reading is done after an insulating transistor, the reported value is the opposite of the logic status of the GPI01 input pin GPI02 is an OPEN COLLECTOR output, the command sets the transistor base level, hence the open collector output is negated
	Note: Tristate pull down settings is available only on some products and GPIO. In case it is not available, automatically the setting is reverted to INPUT. Check the product HW userguide to verify if Tristate pull down settings is available and if it is the default at system startup
AT#GPIO?	Read command reports the read direction and value of all GPIO pins, in the format: #GPIO: <dir>,<stat>[<cr><lf>#GPIO: <dir>,<stat>[]]</stat></dir></lf></cr></stat></dir>
	where <dir> - as seen before <stat> - as seen before</stat></dir>

#GPIO - Genera	Il Purpose Input/Output Pin Control	SELINT 0/1/2
	parameters <pin>, <mode></mode></pin> and <dir></dir> .	
Example	AT#GPIO=3,0,1 OK AT#GPIO=3,2 #GPIO: 1,0 OK	
	AT#GPIO=4,1,1 OK AT#GPIO=5,0,0 OK AT#GPIO=6,2 #GPIO: 0,1 OK	

3.5.7.1.24. STAT_LED GPIO Setting - #SLED

#SLED - STAT_LED (OPIO Setting SELINT 2
AT#SLED= <mode></mode>	Set command sets the behaviour of the STAT_LED GPIO
[, <on_duration></on_duration>	
[, <off_duration>]]</off_duration>	Parameters:
	<mode> - defines how the STAT_LED GPIO is handled</mode>
	0 - GPIO tied Low (default for GL865-DUAL and GL868-DUAL)
	1 - GPIO tied High
	2 - GPIO handled by Module Software (factory default)
	3 - GPIO is turned on and off alternatively, with period defined by the sum
	<on_duration> + <off_duration></off_duration></on_duration>
	<pre><on_duration> - duration of period in which STAT_LED GPIO is tied High</on_duration></pre>
	while <mode>=3</mode>
	1100 - in tenth of seconds (default is 10)
	<pre><off_duration> - duration of period in which STAT_LED GPIO is tied Low while <mode>=3</mode></off_duration></pre>
	1100 - in tenth of seconds (default is 10)
	Note: values are saved in NVM by command #SLEDSAV
	Note: at module boot the STAT_LED GPIO is always tied High and holds this
	value until the first NVM reading.
AT#SLED?	Read command returns the STAT_LED GPIO current setting, in t he format:

80000ST10025a Rev. 10 - 2011-02-17

#SLED - STAT_LED GPI0 Setting SELINT 2		SELINT 2
	#SLED: <mode>,<on_duration>,<off_duration></off_duration></on_duration></mode>	
AT#SLED=?	Test command returns the range of available values for pa	rameters
	<mode>, <on_duration> and <off_duration>.</off_duration></on_duration></mode>	

3.5.7.1.25. Save STAT_LED GPI0 Setting - #SLEDSAV

#SLEDSAV - Save ST	AT_LED GPIO Setting	SELINT 2
AT#SLEDSAV	Execution command saves STAT_LED setting in NVM.	
AT#SLED=?	Test command returns OK result code.	

3.5.7.1.26. SMS Ring Indicator - #E2SMSRI

#E2SMSRI - SMS Rir	ng Indicator SELINT 0 / 1
AT#E2SMSRI[= [<n>]]</n>	Set command enables/disables the Ring Indicator pin response to an incoming SMS message. If enabled, a negative going pulse is generated on
	receipt of an incoming SMS message. The duration of this pulse is determined by the value of <n></n> .
	Parameter:
	<n> - RI enabling</n>
	 0 - disables RI pin response for incoming SMS messages (factory default) 501150 - enables RI pin response for incoming SMS messages. The value of <n> is the duration in ms of the pulse generated on receipt of an incoming SM.</n>
	Note: if +CNMI=3,1 command is issued and the module is in a GPRS connection, a 100 ms break signal is sent and a 1 sec. pulse is generated on RI pin, no matter if the RI pin response is either enabled or not.
	Note: issuing AT#E2SMSRI<cr></cr> is the same as issuing the Read command.
	Note: issuing AT#E2SMSRI= <cr> returns the OK result code.</cr>
AT#E2SMSRI?	Read command reports the duration in ms of the pulse generated on receipt of an incoming SM, in the format:
	#E2SMSRI: <n></n>
	Note: as seen before, the value <n>=0</n> means that the RI pin response to an incoming SM is disabled.

80000ST10025a Rev. 10 - 2011-02-17

#E2SMSRI - SMS Rir	ng Indicator	SELINT 0 / 1
AT#E2SMSRI=?	Reports the range of supported values for parameter <n></n>	
#E2SMSRI - SMS Rir	ng Indicator	SELINT 2
AT#E2SMSRI= [<n>]</n>	Set command enables/disables the Ring Indicator pin res incoming SMS message. If enabled, a negative going puls receipt of an incoming SMS message. The duration of this determined by the value of <n></n> .	e is generated on
	Parameter: <n> - RI enabling 0 - disables RI pin response for incoming SMS message 501150 - enables RI pin response for incoming SMS me of <n> is the duration in ms of the pulse generated o incoming SM.</n></n>	essages. The value
	Note: if +CNMI=3,1 command is issued and the module is connection, a 100 ms break signal is sent and a 1 sec. pul RI pin, no matter if the RI pin response is either enabled of	se is generated on
AT#E2SMSRI?	Read command reports the duration in ms of the pulse ge receipt of an incoming SM, in the format:	
	#E2SMSRI: <n> Note: as seen before, the value <n>=0 means that the RI</n></n>	pin response to an
	incoming SM is disabled.	
AT#E2SMSRI=?	Reports the range of supported values for parameter <n></n>	

3.5.7.1.27. Analog/Digital Converter Input - #ADC

#ADC - Analog/Digita	al Converter Input SELINT 0 / 1
AT#ADC[=	Execution command reads pin< adc> voltage, converted by ADC, and
<adc>,<mode></mode></adc>	outputs it in the format:
[, <dir>]]</dir>	
	#ADC: <value></value>
	where:
	<value> - pin<adc> voltage, expressed in mV</adc></value>
	Parameters:
	<adc> - index of pin</adc>
	For the number of available ADCs see HW User Guide

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 303 of 604

80000ST10025a Rev. 10 - 2011-02-17

#ADC - Analog/Digit	al Converter Input	SELINT 0 / 1
	<mode> - required action 2 - query ADC value <dir> - direction; its interpretation is currently not implem 0 - no effect.</dir></mode>	ented
	If all parameters are omitted the command reports a converted by ADC, in the format:	all pins voltage,
	#ADC: <value>[<cr><lf>#ADC: <value>[]]</value></lf></cr></value>	
	Note: The command returns the last valid measure.	
AT#ADC?	Read command has the same effect as Execution com	nmand when all
	parameters are omitted.	
AT#ADC=?	Test command reports the supported range of values parameters <adc></adc> , <mode></mode> and <dir></dir> .	of the command

#ADC - Read Anal	og/Digital Converter input SELINT 2
AT#ADC=	Execution command reads pin <adc> voltage, converted by ADC, and</adc>
[<adc>,<mode></mode></adc>	outputs it in the format:
[, <dir>]]</dir>	
	#ADC: <value></value>
	where:
	<value> - pin<adc> voltage, expressed in mV</adc></value>
	Parameters:
	<adc> - index of pin</adc>
	For the number of available ADCs see HW User Guide
	<mode> - required action</mode>
	2 - query ADC value
	<dir> - direction; its interpretation is currently not implemented</dir>
	0 - no effect.
	Note: The command returns the last valid measure.
AT#ADC?	Read command reports all pins voltage, converted by ADC, in the format:
	#ADC: <value>[<cr><lf>#ADC: <value>[]]</value></lf></cr></value>
AT#ADC=?	Test command reports the supported range of values of the command
	parameters <adc>, <mode></mode></adc> and <dir></dir> .

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

3.5.7.1.28. Digital/Analog Converter Control - #DAC

<mark>#DAC - Digi</mark> tal//	nalog Converter Control SELINT 0 / 1
AT#DAC[=	Set command enables/disables the DAC_OUT pin.
<enable></enable>	
[, <value>]]</value>	Parameters:
	<enable> - enables/disables DAC output.</enable>
	0 - disables pin; it is in high impedance status (factory default)
	1 - enables pin; the corresponding output is driven
	<pre><value> - scale factor of the integrated output voltage; it must be present if</value></pre>
	01023 - 10 bit precision
	Note: integrated output voltage = MAX_VOLTAGE * value / 1023
	Note: if all parameters are omitted then the behaviour of Set command is
	the same as the Read command.
AT#DAC?	Read command reports whether the DAC_OUT pin is currently enabled or
	not, along with the integrated output voltage scale factor, in the format:
	#DAC: <enable>,<value></value></enable>
AT#DAC=?	Test command reports the range for the parameters <enable></enable> and <value></value> .
Example	Enable the DAC out and set its integrated output to the 50% of the max value:
	AT#DAC=1,511
	OK
	Disable the DAC out:
	AT#DAC=0
	OK
Note	With this command the DAC frequency is selected internally.
	D/A converter must not be used during POWERSAVING.
	DAC_OUT line must be integrated (for example with a low band pass filter)
	in order to obtain an analog voltage.
	For a more in depth description of the integration filter refer to the
	hardware user guide.
#DAC - Digital//	nalog Converter Control SELINT 2

<pre>#DAC - Digital/Analo</pre>	<mark>g Converter Control</mark>	SELINT 2
AT#DAC=	Set command enables/disables the DAC_OUT pin.	
[<enable></enable>

	not, along with the integrated output voltage scale factor, in the format:	
	#DAC: <enable>,<value></value></enable>	
AT#DAC=?	Test command reports the range for the parameters <enable></enable> and <value></value> .	
Example	Enable the DAC out and set its integrated output to the 50% of the max value: AT#DAC=1,511 OK Disable the DAC out: AT#DAC=0 OK	
Note	 With this command the DAC frequency is selected internally. D/A converter must not be used during POWERSAVING. DAC_OUT line must be integrated (for example with a low band pass filter) in order to obtain an analog voltage. For a more in depth description of the integration filter refer to the hardware user guide. 	

3.5.7.1.29. Auxiliary Voltage Output Control - #VAUX

#VAUX- Auxiliary Vol	tage Output Control	SELINT 0 / 1
AT#VAUX[= <n>,</n>	Set command enables/disables the Auxiliary Voltage pins output.	
<stat>]</stat>		
	Parameters:	
	<n> - VAUX pin index</n>	
	1 - there is currently just one VAUX pin	
	<stat></stat>	
	0 - output off	
	1 - output on	
	2 - query current value of VAUX pin	

80000ST10025a Rev. 10 - 2011-02-17

#VAUX- Auxiliar	y Voltage Output Control SELINT 0 / 1
	Note: when <stat>=2</stat> and command is successful, it returns:
	#VAUX: <value></value>
	where: <value></value> - power output status 0 - output off 1 - output on
	Note: If all parameters are omitted the command has the same behaviour as Read command.
	Note: for the GPS product (GE863-GPS): if the Auxiliary Voltage pin output is disabled while GPS is powered on they'll both also be turned off.
	Note: for the GPS products, at commands \$GPSP, \$GPSPS, \$GPSWK control VAUX and can interfere with AT# command.
AT#VAUX?	Read command reports whether the Auxiliary Voltage pin output is currently enabled or not, in the format:
	#VAUX: <value></value>
AT#VAUX=?	Test command reports the supported range of values for parameters <n>, <stat>.</stat></n>
NOTE:	Command available only on GE864-QUAD and GC864-QUAD with SW 10.00.xxx

#VAUX- Auxiliar	<mark>/ Voltage Output Control</mark>	SELINT 2
AT#VAUX=	Set command enables/disables the Auxiliary Voltag	e pins output.
[<n>,<stat>]</stat></n>		
	Parameters:	
	<n> - VAUX pin index</n>	
	1 - there is currently just one VAUX pin	
	<stat></stat>	
	0 - output off	
	1 - output on	
	2 - query current value of VAUX pin	
	Note: when <stat>=2</stat> and command is successful, it	returns:
	#VAUX: <value></value>	
	where:	

80000ST10025a Rev. 10 - 2011-02-17

#VAUX- Auxiliary	/ Voltage Output Control	SELINT 2	
	<value> - power output status</value>		
	0 - output off		
	1 – output on		
		lote: for the GPS product (GE863-GPS): if the Auxiliary Voltage pins output disabled while GPS is powered on they'll both also be turned off.	
		Note: for the GPS products, at commands \$GPSP, \$GPSPS, \$GPSWK control VAUX and can interfere with AT# command.	
	Note: the current setting is stored through #VAUX	SAV	
AT#VAUX?	Read command reports whether the Auxiliary Volta enabled or not, in the format:		
	#VAUX: <value></value>		
AT#VAUX=?	Test command reports the supported range of valu	es for parameters <n></n> ,	
	<stat>.</stat>		
NOTE:	Command available only on GE864-QUAD and 10.00.xxx	GC864-QUAD with SW	

3.5.7.1.30. Auxiliary Voltage Output Save - #VAUXSAV

#VAUXSAV - Auxiliary Voltage Output Save SELINT 2		
AT#VAUXSAV	Execution command saves the actual state of #VAUX pin to	NVM. The state
	will be reload at power-up.	
AT#VAUXSAV=?	Test command returns the OK result code.	

3.5.7.1.31. V24 Output pins mode - #V24MODE

#V24M0DE - V24 Output Pins Mode SELINT 2		SELINT 2
AT#V24M0DE= <port>, <mode>,</mode></port>	Set command sets the <port></port> serial interface functioning •	<mode>.</mode>
<when></when>	 Parameters: <port> - serial port:</port> 0 - ASC0 (AT command port) 1 - ASC1 (trace port) <mode> - AT commands serial port interface hardware pir</mode> 0 - Tx and Rx pins are set in push/pull function during pove (default) 1 - Tx and Rx pins are set in open drain function during pove 2 - Reserved 	wer saving.

80000ST10025a Rev. 10 - 2011-02-17

80000ST10025a Rev. 10 – 2011-02-17

#TXMONMODE- RF T	ransmission Monitor Mode	SELINT 2
	 call is ended. It also goes high when a location update starts, and it drops down when the location update procedure stops. Finally it goes high during SMS transmission and receiving. Even if the TXMON in this case is set as GPIO in output, the read command AT#GPIO=5,2 returns #GPIO:2,0, as the GPIO is in alternate mode. 1 - TXMON is set in alternate mode and the Timer unit controls its state. TXMON goes high 200µs before TXEN goes high. Then power ramps start raising and there is the burst transmission. Finally TXMON drops down 47µs after power ramps stop falling down. This behaviour is repeated for every transmission burst. 	
	Note: if user sets GPIO 5 as input or output the TXMON does not follow the above behaviour.	
	Note: if <mode></mode> is change during a call from 1 to 0, TXMON goes down. If it is restored to 1, TXMON behaves as usual, following the bursts.	
	Note: this command is not supported in GM862 product family.	
AT#TXMONMODE?	Read command reports the <mode></mode> parameter set value,	in the format:
	#TXMONMODE: <mode></mode>	
AT#TXMONMODE=?	Test command reports the supported values for <mode></mode> p	barameter.

3.5.7.1.35. Battery And Charger Status - #CBC

#CBC- Battery And C	#CBC- Battery And Charger Status SELINT 0 / 1	
AT#CBC	Execution command returns the current Battery and Charger state in the format:	
	#CBC: <chargerstate>,<batteryvoltage></batteryvoltage></chargerstate>	
	where:	
	ChargerState> - battery charger state	
	0 - charger not connected	
	1 - charger connected and charging	
	2 - charger connected and charge completed	
	<batteryvoltage> - battery voltage in units of ten millivolts</batteryvoltage>	s: it is the real
	battery voltage only if charger is not connected; if the	charger is
	connected this value depends on the charger voltage.	
AT#CBC?	Read command has the same meaning as Execution comm	nand.

80000ST10025a Rev. 10 - 2011-02-17

#CBC- Battery And	Charger Status	SELINT 0 / 1
AT#CBC=?	Test command returns the OK result code.

3.5.7.1.38. Cell Monitor - #MONI

#MONI - Cell Mo	nitor SELINT 0 / 1
AT#MONI[= [<number>]]</number>	#MONI is both a set and an execution command.
	Set command sets one cell out of seven, in a the neighbour list of the serving cell including it, from which we extract GSM-related information.
	Parameter:
	<number></number>
	06 - it is the ordinal number of a cell, in a the neighbour list of the serving cell (default 0, serving cell).
	7 - it is a special request to obtain GSM-related information s from the whole set of seven cells in the neighbour list of the serving cell.
	Note: issuing AT#MONI<cr></cr> is the same as issuing the Read command.
	Note: issuing AT#MONI= <cr> is the same as issuing the command AT#MONI=0<cr>.</cr></cr>
AT#MONI?	Execution command reports GSM-related information s for selected cell and dedicated channel (if exists).
	a)When extracting data for the serving cell and the network name is known the format is:
	#MONI: <netname> BSIC:<bsic> RxQual:<qual> LAC:<lac> Id:<id></id></lac></qual></bsic></netname>

80000ST10025a Rev. 10 - 2011-02-17

#MONI - Cell Monitor		SELINT 0 / 1
	ARFCN: <arfcn> PWR:<dbm> dBm TA: <timadv></timadv></dbm></arfcn>	
	b)When the network name is unknown, the format is: #MONI: Cc: <cc> Nc:<nc> BSIC:<bsic> RxQual:<qual> LAC:<lac> Id:<id> ARFCN:<arfcn> PWR:<dbm> dBm TA: <timadv></timadv></dbm></arfcn></id></lac></qual></bsic></nc></cc>	
	c)When extracting data for an adjacent cell, the format is: #MONI: Adj Cell <n> [LAC:<lac> Id:<id>] ARFCN:<arfcn> PWR:<dbm> dBm</dbm></arfcn></id></lac></n>	
	<pre>where: <netname> - name of network operator <cc> - country code <nc> - network operator code <n> - progressive number of adjacent cell <bsic> - base station identification code <qual> - quality of reception 07 <lac> - localization area code <id> - cell identifier <arfcn> - assigned radio channel <dbm> - received signal strength in dBm <timadv> - timing advance</timadv></dbm></arfcn></id></lac></qual></bsic></n></nc></cc></netname></pre>	
1.	Note: TA: <timadv></timadv> is reported only for the serving cel If the last setting done by #MONI is 7 , the executio produces a table-like formatted output, as follows:	
	a. First row reports the identifying name of th #MONI: Cell BSIC LAC CellId ARFCN Power C1 C2 MN <cr><lf></lf></cr>	
	 b. Second row reports a complete set of GSM-information for the serving cell: #MONI: S: <bsic> <lac> <id> <arfcn> <dbm> <c1valutimadv> <qual> <netname><cr><lf></lf></cr></netname></qual></c1valutimadv></dbm></arfcn></id></lac></bsic> 	
	c. 3 rd to 8 th rows report a reduced set of GSM-	related

80000ST10025a Rev. 10 - 2011-02-17

#MONI - Cell Monito	or SELINT 0 / 1
	information for the cells in the neighbours: #MONI: N <n> <bsic> <lac> <id> <arfcn> <dbm> <c1value> <c2value >[<cr><lf>]</lf></cr></c2value </c1value></dbm></arfcn></id></lac></bsic></n>
	where: <c1value></c1value> - C1 reselection parameter <c2value></c2value> - C2 reselection parameter <i>other parameters as before</i>
AT#MONI=?	Test command reports the maximum number of cells, in the neighbour list of the serving cell, from which we can extract GSM-related information s , along with the ordinal number of the current selected cell, in the format:
	#MONI: (<maxcellno>,<cellset>)</cellset></maxcellno>
	where: MaxCellNo> - maximum number of cells, in the neighbour list of the serving cell, from which we can extract GSM-related information s (for compatibility with previous versions of code this value is always 5).
	<cellset> - the last setting done with command #MONI. An enhanced version of the Test command has been defined: AT#MONI=??</cellset>
	Note: The serving cell is the current serving cell or the last available serving cell, if the module loses coverage.
AT#MONI=??	Enhanced test command reports the maximum number of cells, in a the neighbour list of the serving cell and including it, from which we can extract GSM-related information s , along with the ordinal number of the current selected cell, in the format:
	#MONI: (<maxcellno>,<cellset>)</cellset></maxcellno>
	 where: <maxcellno> - maximum number of cells, in a the neighbour list of the serving cell and including it, from which we can extract GSM-related informations. This value is always 7.</maxcellno> <cellset> - the last setting done with command #MONI.</cellset>
	Note: The serving cell is the current serving cell or the last available serving cell, if the module loses coverage.

<mark>#ACAL - Automa</mark>	tic Call SELINT 2	
	 Parameter: <mode></mode> 0 - disables the automatic call function (factory default) 1 - enables the automatic call function. If enabled (and &D2 has been issued), the transition OFF/ON of DTR causes an automatic call to the first number (position 0) stored in the internal phonebook. Note: type of call depends on the last issue of command +FCLASS. 	
AT#ACAL?	Note: type of call depends on the last issue of command +FCLASS. Read command reports whether the automatic call function is currently enabled or not, in the format: #ACAL: <mode> Note: as a consequence of the introduction of the command #ACALEXT [Extended Automatic Call) it is possible that the Read Command returns a value supported by #ACALEXT but NOT supported by #ACAL. AT#ACAL? #ACAL : 2 OK Due to this possible situation it is strongly recommended not to use contemporaneously both commands.</mode>	
AT#ACAL=?	Test command returns the supported range of values for parameter <mode></mode> .	
Note	See &Z to write and &N to read the number on module internal phonebook.	

3.5.7.1.44. Extended Automatic Call - #ACALEXT

#ACALEXT - Extend	led Automatic Call	SELINT 0 / 1 / 2	
AT#ACALEXT= <mode>,<index></index></mode>	Set command enables/disables the extended automatic call function.		
	Parameters: <mode></mode>		
	0 - disables the automatic call function (factory default)		
	1 - enables the automatic call function from "ME" phoneb 2 - enables the automatic call function from "SM" phoneb	ook.	
	<index> - it indicates a position in the currently selected pl</index>	nonebook.	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 328 of 604

80000ST10025a Rev. 10 - 2011-02-17

#ACALEXT - Exten	ded Automatic Call SELINT 0 / 1 / 2
	If the extended automatic call function is enabled and &D2 has been issued, the transition OFF/ON of DTR causes an automatic call to the number stored in position <index></index> in the selected phonebook. Note: type of call depends on the last issue of command +FCLASS .
AT#ACALEXT?	Read command reports either whether the automatic call function is currently enabled or not, and the last <index></index> setting in the format:
AT#ACALEXT=?	#ACALEXT: <mode>,<index> The range of available positions in a phonebook depends on the selected phonebook. This is the reason why the test command returns three ranges of values: the first for parameter <mode>, the second for parameter <index> when "ME" is the chosen phonebook, the third for parameter <index> when "SM" is the chosen phonebook.</index></index></mode></index></mode>
Note	Issuing #ACALEXT causes the #ACAL <mode> to be changed. Issuing AT#ACAL=1 causes the #ACALEXT <index> to be set to default. It is recommended to NOT use contemporaneously either #ACALEXT and #ACAL</index></mode>
Note	See &Z to write and &N to read the number on module internal phonebook.

3.5.7.1.45. Extended Call Monitoring - #ECAM

#ECAM - Extended Call Monitoring SELINT		SELINT 0 / 1
AT#ECAM[= [<onoff>]]</onoff>	This command enables/disables the call monitoring function	tion in the ME .
	Parameter:	
	<onoff></onoff>	
	0 - disables call monitoring function (factory default)	
	 enables call monitoring function; the ME informs a such as incoming call, connected, hang up etc. usi unsolicited indication: 	
	#ECAM: <ccid>,<ccstatus>,<calltype>,,, [<number></number></calltype></ccstatus></ccid>	, <type>]</type>
	where	
	<ccid> - call ID</ccid>

#CODEC - Audio (Codec SELINT 2	
AT#CODEC= [<codec>]</codec>	Set command sets the audio codec mode.	
	Parameter:	
	<codec></codec>	
	0 - all the codec modes are enabled (factory default)	
	131 - sum of integers each representing a specific codec mode:	
	1 - FR , full rate mode enabled	
	2 - EFR, enhanced full rate mode enabled	
	4 - HR, half rate mode enabled	
	8 - AMR-FR, AMR full rate mode enabled	
	16 - AMR-HR , AMR half rate mode enabled	
	Note: the full rate mode is added by default to any setting in the SETUP	
	message (as specified in ETSI 04.08).	
	Note: the setting 0 is equivalent to the setting 31.	
	Note: The codec setting is saved in the profile parameters.	
AT#CODEC?	Read command returns current audio codec mode in the format:	
	#CODEC: <codec></codec>	
AT#CODEC=?	Test command returns the range of available values for parameter	
	<codec></codec>	
Example	AT#CODEC=14 OK	
	sets the codec modes HR (4), EFR (2) and AMR-FR (8)	

3.5.7.1.50. Network Timezone - #NITZ

#NITZ - Network Timezone SELINT 0 / 1		SELINT 0 / 1
AT#NITZ[=	Set command enables/disables automatic date/time updat	ing and Network
[<val></val>	Timezone unsolicited indication.

#NITZ - Network Tir	mezone	SELINT 2
	applying and (c) #NITZ URC; moreover it sets the #N	
	format (see <datetime> below) (factory default for all</datetime>	l products except
	GE865-QUAD and GE864-DUAL V2)	
	115 - as a sum of:	
	1 - enables automatic date/time updating	
	2 - enables Full Network Name applying	
	4 - it sets the #NITZ URC <i>'extended'</i> format (see <da< th=""><th></th></da<>	
	8 - it sets the #NITZ URC <i>'extended'</i> format with Da	ylight Saving Time
	(DST) support (see <datetime></datetime> below)	
	(default for GE865-QUAD and GE864-DUAL V2: 7)	
	<pre><mode> 0 - disables #NITZ URC (factory default)</mode></pre>	
	1 - enables #NITZ URC; after date and time updating th	e following
	unsolicited indication is sent:	le lottowing
	#NITZ: <datetime></datetime>	
	where:	
	<datetime> - string whose format depends on subpart</datetime>	rameter <val></val>
	"yy/MM/dd,hh:mm:ss " - <i>'basic'</i> format, if <val></val> is ir	
	"yy/MM/dd,hh:mm:ss±zz" - <i>'extended'</i> format, if <v< th=""><th></th></v<>	
	"yy/MM/dd,hh:mm:ss±zz,d" - <i>'extended'</i> format wit	th DST support, if
	< val> is in (815)	
	where:	
	yy - year	
	MM - month (in digits)	
	dd - day	
	hh - hour	
	mm - minute	
	ss - second	
	zz - time zone (indicates the difference, expressed	in quarter of an
	hour, between the local time and GMT; two last	digits are
	mandatory, range is -47+48)	
	d – number of hours added to the local TZ because	of Daylight Saving
	Time (summertime) adjustment; range is 0-3.	
	Note If the DCT information isn't such but he was a little	an tha indatations -
	Note: If the DST information isn't sent by the network, th	en the <datetime></datetime>
	parameter has the format "yy/MM/dd,hh:mm:ss±zz"	undating (b) Full
AT#NITZ?	Read command reports whether (a) automatic date/time	
	Network Name applying, (c) #NITZ URC (as well as its fo enabled or not, in the format:	initial) are currently

80000ST10025a Rev. 10 - 2011-02-17

#NITZ - Network Timezone SI		SELINT 2
	#NITZ: <val>,<mode></mode></val>	
AT#NITZ=?	Test command returns supported values of parameters <va< th=""><th>al> and <mode>.</mode></th></va<>	al> and <mode>.</mode>

3.5.7.1.51. Clock management - #CCLK

#CCLK - Clock Man	agement SELINT 2
AT#CCLK= <time></time>	Set command sets the real-time clock of the ME .
	Parameter:
	<time> - current time as quoted string in the format:</time>
	"yy/MM/dd,hh:mm:ss±zz,d"
	yy - year (two last digits are mandatory), range is 0099
	MM - month (two last digits are mandatory), range is 0112
	dd - day (two last digits are mandatory)
	The range for dd(day) depends either on the month and on the year it
	refers to. Available ranges are:
	(0128)
	(0129)
	(0130)
	(0131)
	Trying to enter an out of range value will raise an error
	hh - hour (two last digits are mandatory), range is 0023
	mm - minute (two last digits are mandatory), range is 0059
	ss - seconds (two last digits are mandatory), range is 0059
	±zz - time zone (indicates the difference, expressed in quarter of an hour,
	between the local time and GMT; two last digits are mandatory), range is -47+48
	d – number of hours added to the local TZ because of Daylight Saving Time
	(summertime) adjustment; range is 0-2.
AT#CCLK?	Read command returns the current setting of the real-time clock, in the
	format <time></time> .
	Note: if the time is set by the network but the DST information is missing, or
	the time is set by +CCLK command, then the <time></time> format is:
	"yy/MM/dd,hh:mm:ss±zz"
AT#CCLK=?	Test command returns the OK result code.
Example	AT#CCLK="02/09/07,22:30:00+04,1"
F -	OK AT#CCLK?
	#CCLK: 02/09/07,22:30:25+04,1

#CCLK - Clock Management		SELINT 2
	OK	

3.5.7.1.52. Enhanced Network Selection - #ENS

#ENS - Enhanced No	etwork Selection SELINT 2
AT#ENS=[<mode>]</mode>	Set command is used to activate the ENS functionality.
	 Parameter: <mode></mode> 0 - disable ENS functionality (default) 1 - enable ENS functionality; if AT#ENS=1 has been issued, the following values will be automatically set: > at every next power-up a Band GSM 850 and PCS enabled (AT#BND=3) b SIM Application Toolkit enabled on user interface 0 if not previously enabled on a different user interface (AT#STIA=2) > just at first next power-up a Automatic Band Selection enabled (AT#AUTOBND=1) only if the previous setting was different from AT#AUTOBND=2 b PLMN list not fixed (AT#PLMNMODE=1).
	Note: the new setting will be available just at first next power-up. Note: If 'Four Band' Automatic Band Selection has been activated
	(AT#AUTOBND=2), at power-up the value returned by AT#BND? could be different from 3 when ENS functionality is enabled.
	Note: on version 10.0x.xx4 the set command AT#ENS=1 doesn' t enable the SIM Application Toolkit if the command AT#ENAUSIM? returns 1.
AT#ENS?	Read command reports whether the ENS functionality is currently enabled or not, in the format:
	#ENS: <mode> where: <mode> as above</mode></mode>
AT#ENS=?	Test command reports the available range of values for parameter <mode></mode> .

2 - antenna connector short circuited to power.
3 - antenna not detected (open).
 3 - instantaneous activation of the antenna detection algorithm as modality 2 but in this case the command doesn't return until the algorithm ended. The returned value is the antenna <presence> status just</presence> detected. Format:
AT#GSMAD=3
#GSMAD: <presence></presence>
OK
This instantaneous activation doesn't affect a periodic activation eventually started before, then the output format would be:
AT#GSMAD=3
#GSMAD: <presence></presence>
#05MAD. (presence)
OK
#GSMAD: <presence> // URC resulting of previous #GSMAD=1</presence>
<ur><urcmode> - URC presentation mode. It has meaning and can be set only if</urcmode></ur>
<mod></mod> is 1.
0 - it disables the presentation of the antenna detection URC
1 - it enables the presentation of the antenna detection URC, whenever the
antenna detection algorithm detects a change in the antenna status; the
unsolicited message is in the format:
#GSMAD: <presence></presence>
where:
<presence> is as before</presence>
<pre><interval> - duration in seconds of the interval between two consecutive</interval></pre>
antenna detection algorithm runs (default is 120). It has

page 350 of 604

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

	meaning and can be set only if <mod></mod> is 1. 13600 - seconds
	<detgpio> - defines which GPIO shall be used as input by the Antenna Detection algorithm. For the <detgpio> actual range see Test Command</detgpio></detgpio>
	repGPIO> - defines which GPIO shall be used by the Antenna Detection algorithm to report antenna condition. It has meaning only if <mod> is 1. For the <repgpio> actual range see Test Command.</repgpio></mod>
	Note: the URC presentation mode <urcmode></urcmode> is related to the current AT instance only (see +cmux); last <urcmode></urcmode> settings are saved for every instance as extended profile parameters, thus it is possible to restore them either if the multiplexer control channel is released and set up, back and forth.
	Note: GPIO is set to LOW when antenna is connected. Set to HIGH otherwise
	Note: #GSMAD parameters, excluding <urcmode></urcmode> , are saved in NVM.
AT#GSMAD?	Read command returns the current parameter settings for #GSMAD command in the format:
	#GSMAD: <mod>,<urcmode>,<interval>,<detgpio>,<repgpio></repgpio></detgpio></interval></urcmode></mod>
AT#GSMAD=?	Test command reports the supported range of values for parameters <mod>, <urcmode>, <interval>, <detgpio> and <repgpio>.</repgpio></detgpio></interval></urcmode></mod>

3.5.7.1.61. SIM Detection Mode - #SIMDET

#SIMDET - SIM Detection Mode SELINT 2		SELINT 2
AT#SIMDET= <mode></mode>	Set command specifies the SIM Detection mode	
	Parameter: <mode></mode> - SIM Detection mode 0 - ignore SIMIN pin and simulate the status 'SIM N 1 - ignore SIMIN pin and simulate the status 'SIM In 2 - automatic SIM detection through SIMIN Pin (def	nserted'
AT#SIMDET?	Read command returns the currently selected Sim I format:	Detection Mode in the

80000ST10025a Rev. 10 - 2011-02-17

	#SIMDET: <mode>,<simin></simin></mode>
	<pre>where: <mode> - SIM Detection mode, as before <simin> - SIMIN pin real status 0 - SIM not inserted 1 - SIM inserted</simin></mode></pre>
AT#SIMDET=?	Test command reports the supported range of values for parameter <mode></mode>

3.5.7.1.62. SIM Enhanced Speed - #ENHSIM

#ENHSIM - SIM Enh	nanced Speed SELINT 2
AT#ENHSIM= <mod></mod>	Set command activates or deactivates the Sim Enhanced Speed Functionality.
	Parameter: <mod> 0 - Not Active (default for all products, except GE865-QUAD and GE864- DUAL V2) 1 - BRF is (F=512 D=8) (default for GE865-QUAD and GE864-DUAL V2) <i>(For BRF definition refer to ISO-7816-3</i></mod>
	Note: value <mod></mod> is saved in NVM and will be used since next module startup or new SIM insertion.
	Note: module will use the slowest speed between the one programmed and the one supported by the SIM.
AT#ENHSIM?	Read command returns whether the Sim Enhanced Speed Functionality is currently activated or not, in the format:
	#ENHSIM: <mod></mod>
AT#ENHSIM=?	Test command reports the supported range of values for parameter <mod></mod> .
Reference	GSM 11.11, ISO-7816-3
Note	It is strongly suggested to verify which is the maximum speed supported by the final application

3.5.7.1.63. Subscriber number - #SNUM

80000ST10025a Rev. 10 - 2011-02-17

<mark>#SNUM –</mark> Subscriber	Number SELINT 2
AT#SNUM= <index>,<number>[,</number></index>	Set command writes the MSISDN information related to the subscriber (own number) in the EFmsisdn SIM file.
<alpha>]</alpha>	Parameter: <index> - record number The number of record in the EFmsisdn depends on the SIM. If the ENS functionality has not been previously enabled (see <u>#ENS</u>), <index>=1 is the</index></index>
	only value admitted. If only <index></index> value is given, then delete the EFmsisdn record in location <index></index> is deleted. <number></number> - string containing the phone number
	The string could be written between quotes. If the ENS functionality has been previously enabled (see <u>#ENS</u>) "+" at start only is also admitted (international numbering scheme).
	<alpha> - alphanumeric string associated to <number>. Default value is empty string (""), otherwise the used character set should be the one selected with +CSCS. The string could be written between quotes, the number of characters depends on the SIM. If empty string is given (""), the corresponding <alpha> will be an empty string.</alpha></number></alpha>
	Note: the command return ERROR if EFmsisdn file is not present in the SIM or if MSISDN service is not allocated and activated in the SIM Service Table (see 3GPP TS 11.11).
AT#SNUM=?	Test command returns the OK result code

3.5.7.1.64. SIM Answer to Reset - #SIMATR

#SIMATR – SIM Answer To Reset SELIN		SELINT 2
AT#SIMATR This command returns the characters collected from Reset/ATR procedure.		ollected from the
	Note: The ATR is the information present the beginning of the card session and give requirements (ISO/IEC 7816-3).	,

3.5.7.1.65. CPU Clock Mode - #CPUMODE

#CPUMODE - CPU C	lock Mode	SELINT 2
AT#CPUMODE= <mode></mode>	Set command specifies the CPU clock mode	
	Parameter: <mode></mode> 0 - normal CPU clock 1 - fast CPU clock 2 - fast CPU clock, during GPRS TX/RX only Note: using <mode>=1</mode> , the power consumption will increa	ise
AT#CPUMODE?	Read command returns the currently selected CPU clock format: #CPUMODE: <mode></mode>	mode in the
AT#CPUMODE=?	Test command reports the supported range of values for p <mode>.</mode>	parameter

GSM Context Definition - #GSMCONT 3.5.7.1.66.

#GSMCONT - GSM C	ontext Definition SELINT 2
AT#GSMCONT=	Set command specifies context parameter values for the only GSM context,
<cid>[,<p_type>,</p_type></cid>	identified by the (local) context identification parameter 0.
<csd_num>]</csd_num>	
	Parameters:
	<cid> - context Identifier; numeric parameter which specifies the only GSM context</cid>
	0
	<p_type> - protocol type; a string parameter which specifies the type of protocol</p_type>
	"IP" - Internet Protocol
	<csd_num> - phone number of the internet service provider</csd_num>
	Note: issuing #GSMCONT=0 causes the values for context number 0 to become undefined.
AT#GSMCONT?	Read command returns the current settings for the GSM context, if defined, in the format:
	+GSMCONT: <cid>,<p_type>,<csd_num></csd_num></p_type></cid>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

AT#GSMCONT=?	Test command returns the supported range of values for all the
	parameters.

3.5.7.1.67. IPEGSM configurations - #GSMCONTCFG

#GSMCONTCFG - IPEGSM configu	rations SELINT 2
AT#GSMCONTCFG=	Set command sets the IPEGSM configuration.
<actto>[,<unused_a></unused_a></actto>	
[, <unused_b>[,<unused_c>]]]]</unused_c></unused_b>	Parameters:
	<actto> - activation timer value</actto>
	0 – no timer (default)
	5065535 – timeout value in hundreds of milliseconds
	Note: this timeout starts as soon as the PPP activation starts (refer to EasyGPRS User Guide). It does not include the time for the CSD call to be established.
	Note: the value set by command is directly stored in NVM and doesn't depend on the specific AT instance.
AT#GSMCONTCFG?	Read command returns the current configuration parameters value:
	#GSMCONTCFG: <actto>,0,0,0<cr><lf></lf></cr></actto>
AT#GSMCONTCFG=?	Test command returns the range of supported values for all the subparameters.

3.5.7.1.68. Show Address - #CGPADDR

#CGPADDR - Show A	ddress	SELINT 2
AT#CGPADDR= [<cid>[,<cid> [,]]]</cid></cid>	Execution command returns either the IP address for the specified) and/or a list of PDP addresses for the specified identifiers	
	Parameters:	

80000ST10025a Rev. 10 - 2011-02-17

	OK
Example	AT#SGACT=0,1 #SGACT: xxx.yyy.zzz.www
AT#CGPADDR=?	Test command returns a list of defined <cid></cid> s.
	<pre>where: <cid> - context identifier, as before <address> - its meaning depends on the value of <cid> a) if <cid> is the (only) GSM context identifier (<cid>=0) it is the dynamic address assigned during the GSM context activation. b) if <cid> is a PDP context identifier (<cid> in (15)) it is a string that identifies the terminal in the address space applicable to the PDP. The address may be static or dynamic. For a static address, it will be the one set by the +CGDCONT command when the context was defined. For a dynamic address it will be the one assigned during the last PDP context activation that used the context definition referred to by <cid>. Note: if no address is available the empty string ("") is represented as <address>.</address></cid></cid></cid></cid></cid></cid></address></cid></pre>
	#CGPADDR: <cid>,<address>[<cr><lf> #CGPADDR: <cid>,<address>[]]</address></cid></lf></cr></address></cid>
	The command returns a row of information for every specified <cid></cid> whose context has been already defined. No row is returned for a <cid></cid> whose context has not been defined yet. Response format is:
	Note: the command returns only one row of information for every specified <cid></cid> , even if the same <cid></cid> is present more than once.
	Note: issuing the command with more than 6 parameters raises an error.
	Note: if no <cid></cid> is specified, the addresses for all defined contexts are returned.
	 <cid> - context identifier</cid> 0 - specifies the GSM context (see +GSMCONT). 15 - numeric parameter which specifies a particular PDP context definition (see +CGDCONT command).

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

3.5.7.1.70. Call Establishment Lock - #CESTHLCK

#CESTHLCK – Call e	#CESTHLCK – Call establishment lock SELINT 2	
AT#CESTHLCK=	This command can be used to disable call abort before the DCE enters	
[<closure_type>]</closure_type>	connected state.	
	 < closure_type >: 0 - Aborting the call setup by reception of a character is generally possible at any time before the DCE enters connected state (default) 1 - Aborting the call setup is disabled until the DCE enters connected state 	
AT#CESTHLCK?	Read command returns the current setting of <closure_type></closure_type> parameter in the format:	
	#CESTHLCK: <closure_type></closure_type>	
AT#CESTHLCK=?	Test command returns the supported range of values for the <pre><closure_type></closure_type></pre> parameter	

3.5.7.1.71. Phone Activity Status - #CPASMODE

#CPASMODE - AT+CPAS ans	wer mode SELINT 2
AT#CPASMODE= <mode></mode>	Set command enables/disables a modified AT+CPAS command response when the command is issued before an incoming call starts ringing (RING unsolicited code sent to the TE). If <mode></mode> is 0, AT+CPAS response will be +CPAS: 4 otherwise the response will be +CPAS: 3 Parameter: <mode></mode> - AT+CPAS response selection 0 - standard AT+CPAS response (factory default) 1 - modified AT+CPAS response. Note: the value set by command is directly stored in NVM and doesn't depend on the specific AT instance
AT#CPASMODE?	Read command reports the currently selected <mode></mode> in the format: #CPASMODE: <mode></mode>

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

AT#CPASMODE=?	Test command reports the supported range of values for
	parameter <mode></mode>

3.5.7.1.72. ICCID SIM file reading mode - #FASTCCID

#FASTCCID – Set ICC	CID SIM file reading mode SELINT 2
AT#FASTCCID= [<fast>]</fast>	The set command is used to specify the ICCID reading mode.
	<fast>: a numeric parameter which indicates the reading mode</fast>
	0 – the ICCID value is read from the SIM card each time the AT#CCID command is issued and not during SIM card initialization (default)
	1 – the ICCID value is read from the SIM card during SIM card initialization
	Note: the value is saved in NVM and has effect only at the next power cycle.
AT#FASTCCID?	The read command returns the currently selected reading mode in the form:
	#FASTCCID: <fast></fast>
AT#FASTCCID=?	Test command reports the supported list of currently available <fast>s.</fast>

3.5.7.1.73. I2C data via GPIO - #I2CWR

#I2CWrite - Write to	12C	SELINT 2
AT#I2CWR=	This command is used to Send Data to an I2C peripheral conn	ected to
<sdapin>,</sdapin>	module GPIOs	
<sclpin>,</sclpin>		
<deviceid>,</deviceid>	sdaPin >: GPIO number for SDA . Valid range is "any input/o	utput pin" (see
<registerid>,</registerid>	Test Command.)	
<len></len>		
	sclPin>: GPIO number to be used for SCL. Valid range is "an (see Test Command).	y output pin"
	<deviceid>: address of the I2C device, with the LSB, used for</deviceid>	read\write
	command. It doesn't matter if the LSB is set to 0 or to 1. 10 bis supported.	t addressing
	Value has to be written in hexadecimal form (without 0x).	
	<registerid>: Register to write data to , range 0255.</registerid>	

80000ST10025a Rev. 10 - 2011-02-17

#I2CWrite - Write to	I2C SELINT 2
	Value has to be written in hexadecimal form (without 0x).
	<len>: number of data to send. Valid range is 1-254.</len>
	The module responds to the command with the prompt '>' and awaits for the data to send.
	To complete the operation send Ctrl-Z char (0x1A hex); to exit without writing the message send ESC char (0x1B hex).
	Data shall be written in Hexadecimal Form.
	If data are successfully sent, then the response is OK .
	If data sending fails for some reason, an error code is reported. Example if CheckAck is set and no Ack signal was received on the I2C bus
	E.g. AT#I2CWR=2,3,20,10,14 > 00112233445566778899AABBCCDD <ctrl-z> OK</ctrl-z>
	Set GPI02 as SDA, GPI03 as SCL; Device I2C address is 0x20;
	0x10 is the address of the first register where to write I2C data; 14 data bytes will be written since register 0x10
	NOTE: At the end of the execution GPIO will be restored to the original setting (check AT#GPIO Command)
	NOTE: device address, register address where to read from\ write to, and date bytes have to be written in hexadecimal form without 0x.
AT#I2CWR=?	Test command reports the supported list of currently available <service>s.</service>

3.5.7.1.74. I2C data from GPIO - #I2CRD

<mark>#I2CRD - Read to I2C</mark>		SELINT 2
AT#I2CRD= <sdapin>, <sclpin>,</sclpin></sdapin>	This command is used to Send Data to an I2C peripheral connected to module GPIOs	
<pre><deviceid>, <registerid>, <len></len></registerid></deviceid></pre>	<sdapin>: GPIO number for SDA . Valid range is "any input/output pin" (see Test Command.)</sdapin>	
	<sclpin>: GPIO number to be used for SCL. Valid range is '</sclpin>	'any output pin"

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

80000ST10025a Rev. 10 – 2011-02-17

#I2CRD - Read to I20	SELINT 2
	(see Command Test).
	<deviceid>: address of the I2C device, with the LSB, used for read\write command. It doesn't matter if the LSB is set to 0 or to 1. 10 bit addressing supported. Value has to be written in hexadecimal form (without 0x before).</deviceid>
	< registerId>: Register to read data from, range 0255. Value has to be written in hexadecimal form (without 0x before).
	<len>: number of data to receive. Valid range is 1-254.</len>
	Data Read from I2C will be dumped in Hex:
	E.g. AT#I2CRD=2,3,20,10,12 #I2CRD: 00112233445566778899AABBCC OK
	NOTE: If data requested are more than data available in the device, dummy data (normally 0x00 or 0xff) will be dumped.
	NOTE: At the end of the execution GPIO will be restored to the original setting (check AT#GPIO Command)
	NOTE: device address, register address where to read from\ write to, and date bytes have to be written in hexadecimal form without 0x.
AT#I2CRD=?	Test command reports the supported list of currently available <service>s.</service>

3.5.7.1.75. Power saving mode ring - #PSMRI

#PSMRI – Power Saving Mode Ring SELINT 2		SELINT 2	
AT#PSMRI=	Set command enables/disables the Ring Indicat	tor pin response to an	
<x></x>	URC message while modem is in power saving	URC message while modem is in power saving mode. If enabled, a	
	negative going pulse is generated, when URC m invoked.	negative going pulse is generated, when URC message for specific event is invoked.	
	The duration of this pulse is determined by the	value of <x></x> .	
	Parameter:	Parameter:	
	<x> - RI enabling</x>		
	0 - disables RI pin response for URC message(factory default) 50-1150 - enables RI pin response for URC messages.		

80000ST10025a Rev. 10 - 2011-02-17

	Note: when RING signal from incoming call/SMS/socket listen is enabled, the behaviour for #PSMRI will be ignored. Note: to avoid missing of URC messages while modem is in power saving mode flow control has to be enabled in command mode (AT#CFLO=1) Note: the behavior for #PSMRI is invoked, only when modem is in sleep mode (AT+CFUN=5 and DTR Off on Main UART)
	Note: the value set by command is stored in the profile extended section and doesn't depend on the specific AT instance
AT#PSMRI?	Read command reports the duration in ms of the pulse generated, in the format: #PSMRI: <x></x>
AT#PSMRI=?	Test command reports the supported range of values for parameter <x></x>

3.5.7.1.76. Software level selection - #SWLEVEL

#SWLEVEL - SW Level select	tion SELINT 2
AT#SWLEVEL= <level></level>	Set command enables 2 enhanced features: 1) It permits to get a faster indication of SIM status when the PIN is not required (see command #QSS) 2) DTMF duration (see AT+VTS;AT+VTD) can be controlled even for values shorter than 300mS. Parameters: <level> - SW level 0 - disable SW level (default for for all products, except GE865-QUAD and GE864-DUAL V2) 1 - enable SW level (default for GE865-QUAD and GE864-DUAL V2) Note1: the value of <level> parameter is directly stored in NVM and doesn't depend on the specific AT instance. Note2: please remember that DTMFs are generated at network level, and the real duration can be operator dependant.</level></level>
AT#SWLEVEL?	Read command reports the currently selected <level></level> in the format:

80000ST10025a Rev. 10 - 2011-02-17

	#SWLEVEL: <level></level>
AT#SWLEVEL=?	Test command reports the supported range of values for parameter< level>

3.5.7.1.77. Control Command Flow - #CFLO

#CFLO – Command F	Flow Control SELIN	T 2
AT#CFLO= <enable></enable>	Set command enables/disables the flow control in command mode. If enabled, current flow control is applied to both data mode and command mode. Parameter: <enable> - 0 - disable flow control in command mode <default value=""> 1 - enable flow control in command mode Note: setting value is saved in the profile</default></enable>	
AT#CFL0?	Read command returns current setting value in the format #CFLO: <enable></enable>	
AT#CFLO=?	Test command returns the range of supported values for parameter <enable></enable>	

3.5.7.1.78. Report concatenated SMS indexes - #CMGLCONCINDEX

#CMGLCONCINDEX – Report	#CMGLCONCINDEX – Report concatenated SMS indexes SELINT 2		
AT#CMGLCONCINDEX	The command will report a line for each concatenated SMS containing:		
	#CMGLCONCINDEX: N,i,j,k,		
	where N is the number of segments that form the whole SMS	concatenated	
	i,j,k are the SMS indexes of each SMS segment , 0 not been received	if segment has	
	If no concatenated SMS is present on the SIM, only will be returned.	OK result code	
AT#CMGLCONCINDEX=?	Test command returns OK result code.		

80000ST10025a Rev. 10 - 2011-02-17

#CMGLCONCINDEX – Report concatenated SMS indexes		SELINT 2
Example	<pre>at#cmglconcindex #CMGLCONCINDEX: 3,0,2,3 #CMGLCONCINDEX: 5,4,5,6,0,8 OK</pre>	

3.5.7.1.79. Codec Information - #CODECINFO

#CODECINFO – Code	ec Information	SELINT 2
AT#CODECINF0[This command is both a set and an execution comman	d.
= <format>[,</format>		
<mode>]]</mode>	Set command enables/disables codec information repo	orts depending on
	the parameter <mode></mode> , in the specified <format></format> .	
	Parameters:	
	<format></format>	
	0 – numeric format (default)	
	1 – textual format	
	<mode></mode>	
	0 - disable codec information unsolicited report (defa	ult)
	1 - enable codec information unsolicited report only if	the codec
	changes	
	2 - enable short codec information unsolicited report	only if the codec
	changes	
	If <mode>=1</mode> the unsolicited channel mode informa	tion is reported in
	the following format:	
	(if <format>=0</format>)	
	#CODECINF0: <codec_used>,<codec_set></codec_set></codec_used>	
	(if <format>=1)</format>	
	#CODECINF0: <codec_used>,<codec_set1></codec_set1></codec_used>	
	[, <codec_set2>[[,codec_setn]]]</codec_set2>	
	If <mode>=2</mode> the unsolicited codec information is re	eported in the
	following format:	
	#CODECINF0: <codec_used></codec_used>	

80000ST10025a Rev. 10 - 2011-02-17

#CODECINFO – Codec	Information	SELINT 2
	The reported values are described below.	
	Execution command reports codec information in the spe	ecified <format></format> .
	(if <format>=0) #CODECINF0: <codec_used>,<codec_set></codec_set></codec_used></format>	
	(if <format>=1) #CODECINF0: <codec_used>,<codec_set1> [,<codec_set2>[[,codec_setn]]]</codec_set2></codec_set1></codec_used></format>	
	The reported values are:	
	<pre>(if <format>=0) <codec_used> - one of the following channel modes: 0 - no TCH 1 - full rate speech 1 on TCH 2 - full rate speech 2 on TCH 4 - half rate speech 1 on TCH 8 - full rate speech 3 - AMR on TCH 16 - half rate speech 3 - AMR on TCH 128 - full data 9.6 129 - full data 4.8 130 - full data 2.4 131 - half data 4.8 132 - half data 2.4 133 - full data 14.4</codec_used></format></pre>	
	<codec_set> 131 - sum of integers each representing a specific of 1 - FR, full rate mode enabled 2 - EFR, enhanced full rate mode enabled 4 - HR, half rate mode enabled 8 - FAMR, AMR full rate mode enabled 16 - HAMR, AMR half rate mode enabled </codec_set>	codec mode:
	(if <format>=1</format>) <codec_used></codec_used> - one of the following channel modes: None – no TCH FR - full rate speech 1 on TCH EFR - full rate speech 2 on TCH HR - half rate speech 1 on TCH

#CODECINFO - Codec	Information	SELINT 2
	 FAMR - full rate speech 3 – AMR on TCH HAMR - half rate speech 3 – AMR on TCH FD96 - full data 9.6 FD48 - full data 4.8 FD24 - full data 2.4 HD48 - half data 2.4 FD144 - half data 2.4 FD144 - full data 14.4 <codec_set<i>n></codec_set<i> FR - full rate mode enabled EFR - enhanced full rate mode enabled HAMR - AMR full rate mode enabled HAMR - AMR half rate mode enabled Note: The command refers to codec information in speech channel mode in data/fax call. Note: if AT#CODEC is 0, the reported codec set for <formation< li=""> </formation<>	
AT#CODECINFO?	Read command reports <format></format> and <mode></mode> parameter format: #CODECINFO: <format>,<mode></mode></format>	r values in the
AT#CODECINFO=?	Test command returns the range of supported <format></format> a	and <mode></mode> .

3.5.7.1.80. Second Interface Instance - #SII

<mark>#SII –</mark> Second Interface Insta	nce	SELINT 2
AT#SII= <inst>[,<rate>[,<for mat>[,<parity>]]]</parity></for </rate></inst>	This command activates one of the three and assigns it to the ASC1 serial port at format.	
Parameters: <inst>: is a number that identifies the instan ASC1. The parameter is mandatory a 0 – disables the other AT instance an</inst>		can be 0, 1 or 2:

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

1 – enables instance 1;
2 – enables instance 2;
<pre><rate>:</rate></pre>
Set command specifies the DTE speed at which the device accepts
commands during command mode operations; it may be used to fix
the DTE-DCE interface speed. The default value is 115200. It has
sense only if <inst></inst> parameter has value either 1 or 2.
Parameter:
300
1200
2400
4800
9600
19200
38400
57600
115200
<format>:</format>
determines the number of bits in the data bits, the presence of a
parity bit, and the number of stop bits in the start-stop frame. The
default value is 3,0, (N81) format. It has sense only if <inst></inst>
parameter has value either 1 or 2.
Parameter:
1 - 8 Data, 2 Stop
2 - 8 Data, 1 Parity, 1 Stop
3 - 8 Data, 1 Stop
5 - 7 Data, 1 Parity, 1 Stop
<pre><pre>cparity>:</pre></pre>
determines how the parity bit is generated and checked, if present.
It has a meaning only if <format></format> parameter has value either 2 or 5
and only if <inst></inst> parameter has value either 1 or 2.
Parameter:
0 - Odd
1 - Even
Note: the value set by command is directly stored in NVM and
doesn't depend on the specific AT instance.
Note: two sets of <rate>, <format></format></rate> and <parity></parity> parameters
values are stored in NVM: one for instance 1 (<inst></inst> = 1) and the

page 367 of 604

80000ST10025a Rev. 10 - 2011-02-17

	other for instance 2 (<inst></inst> = 2). The <rate></rate> , <format></format> and <parity></parity> parameters values are ignored when <inst></inst> parameter has value 0. Note: ASC1 port doesn't support hardware flow control.
AT#SII?	Read command reports the currently active parameters settings in the format: #SII: <inst>[,<rate>,<format>,<parity>]</parity></format></rate></inst>
	Note: the <rate></rate> , <format></format> and <parity></parity> parameters values are showed only if <inst></inst> parameter has value either 1 or 2.
AT#SII=?	Test command reports the supported range of values for parameter <inst></inst> , <rate></rate> , <format></format> and <parity></parity>

SIMIN pin configuration - #SIMINCFG 3.5.7.1.81.

#SIMINCFG – SIMIN pin configuration SELINT 2	
AT#SIMINCFG= <gpi0_pin></gpi0_pin>	This command allows to configure a General Purpose I/O pin as SIM DETECT input
	Parameters: <gpi0_pin> - GPI0 pin number: 0 – no GPI0 pin is selected (default value) 1 to <i>Max_GPI0_Pin_Number</i></gpi0_pin>
	Note: <i>Max_GPIO_Pin_Number</i> is the highest GPIO pin number available: this value depends on the hardware. (See Test command or Hardware User Guide)
AT#SIMINCFG?	Read command reports the selected GPIO pin in the format:
	#SIMINCFG: <gpi0_pin></gpi0_pin>
AT#SIMINCFG=?	Test command reports supported range of values for
	parameter <gpio_pin></gpio_pin>

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

3.5.7.1.82. System turn-off

#SYSHALT - system turn-off		SELINT 0,1,2
AT#SYSHALT[= <gpi0_restore>, <dtr_wakeup_en>]</dtr_wakeup_en></gpi0_restore>	The module is turned off. It can be awaken by rese DTR pin transition to low. Parameters: < GPIO_restore >: 0 – GPIOs and serial ports pins are left unchanged 1 – GPIO and serial pins are set in input with pull of <dtr_wakeup_en>: 0 – DTR has no effect on module turned off by SYS 1 – DTR transition from high to low turns on again</dtr_wakeup_en>	l (default) Jown HALT (default)
AT#SYSHALT?	turned off by SYSHALT command Read command reports the default state of the pa <gpio_restore> and <dtr_wakeup_en> in the f #SYSHALT: 0,0</dtr_wakeup_en></gpio_restore>	
AT#SYSHALT=?	Test command reports supported range of values parameters.	for all

3.5.7.1.83. Enable USIM application - #ENAUSIM

#ENAUSIM – Enable USIM application SELINT 2	
AT#ENAUSIM= <enable></enable>	This command enables/disables the USIM application
	Parameters:
	<enable>:</enable>
	0: USIM application Disabled
	1: USIM application Enabled
	Note: the value set by command is directly stored in NVM and available on following reboot. USIM application activation/deactivation is only performed at power on.
	Each time enable value is changed a power cycle is needed
	Note: when the USIM application is enabled, SIM Application Toolkit will be automatically disabled and cannot be activated. In particular, the request of SAT activation (see #STIA) will return ERROR and entering AT#ENS = 1 doesn't activate SAT.

80000ST10025a Rev. 10 - 2011-02-17

AT#ENAUSIM?	Read command reports the currently selected <enable></enable> in the format: #ENAUSIM: <enable></enable>
AT#ENAUSIM=?	Test command reports the supported range of values for parameter <enable></enable>

3.5.7.1.84. Select language - #LANG

#LANG – select language	SELINT 2
AT#LANG= <lan></lan>	Set command selects the currently used language for displaying different messages
	Parameter: <lan> - selected language "en" – English (factory default) "it" – Italian</lan>
AT#LANG?	Read command reports the currently selected <lan> in the format: #LANG: <lan></lan></lan>
AT#LANG=?	Test command reports the supported range of values for parameter <lan></lan>

3.5.7.1.85. Postpone alarm - +CAPD

+CAPD – postpone or dismiss an alarm SELINT 2	
AT+CAPD=[<sec>]</sec>	Set command postpones or dismisses a currently active alarm. Parameters: <sec< b="">>: integer type value indicating the number of seconds to postpone the alarm (maximum 60 seconds). If <sec> is set to 0 (default), the alarm is dismissed.</sec></sec<>
AT+CAPD=?	Test command reports the supported range of values for parameter <sec></sec>

3.5.7.1.86. Call meter maximum event - +CCWE

80000ST10025a Rev. 10 - 2011-02-17

+CCWE – Call Meter maxim	um event SELINT 2
AT+CCWE= <mode></mode>	Set command is used to enable/disable sending of an unsolicited result code +CCWV shortly before the ACM (Accumulated Call Meter) maximum value is reached. The warning is issued approximately when 30 seconds call time remains. It is also issued when starting a call if less than 30 seconds call time remains. Parameters: <mode>: 0 Disable the call meter warning event (default) 1 Enable the call meter warning event Note: the set command will respond with an error if the Accumulated Call Meter service is not active in SIM</mode>
AT+CCWE?	Read command reports the currently selected <mode> in the format: +CCWE: <mode></mode></mode>
AT+CCWE=?	Test command reports the supported range of values for parameter <mode></mode>

3.5.7.1.87. Setting date format - +CSDF

+CSDF - setting date format	SELINT 2
AT+CSDF=[<mode></mode>	This command sets the date format of the date information
[, <auxmode>]]</auxmode>	presented to the user, which is specified by use of the <mode></mode>
	parameter. The <mode></mode> affects the date format on the phone
	display and doesn't affect the date format of
	the AT command serial interface, so it not used.
	The command also sets the date format of the TE-TA interface,
	which is specified by use of the <auxmode></auxmode> parameter (i.e., the
	<auxmode> affects the <time> of AT+CCLK and AT+CALA). If the</time></auxmode>
	parameters are omitted then this sets the default value of <mode></mode> .
	Parameters:
	<mode>:</mode>
	1 DD-MMM-YYYY (default)
	2 DD-MM-YY
	3 MM/DD/YY
	4 DD/MM/YY

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

80000ST10025a Rev. 10 - 2011-02-17

	5 DD.MM.YY 6 YYMMDD 7 YY-MM-DD <auxmode>:</auxmode> 1 yy/MM/dd (default) 2 yyyy/MM/dd Note: The <time> format of +CCLK and +CALA is "yy/MM/dd,hh:mm:ss+zz" when <auxmode>=1 and it is "yyyy/MM/dd,hh:mm:ss+zz" when <auxmode>=2.</auxmode></auxmode></time>
AT+CSDF?	Read command reports the currently selected <mode></mode> and <auxmode></auxmode> in the format: +CSDF: <mode>,<auxmode></auxmode></mode>
AT+CSDF=?	Test command reports the supported range of values for parameters <mode></mode> and <auxmode></auxmode>

3.5.7.1.88. Silence command - +CSIL

+CSIL - silence command	SELINT 2
AT+CSIL=[<mode>]</mode>	This command enables/disables the silent mode. When the phone is in silent mode, all signalling tones from MT are suppressed. Parameters: <mode>: 0 Silent mode off (default) 1 Silent mode on</mode>
AT+CSIL?	Read command reports the currently selected <mode></mode> in the format: +CSIL: <mode></mode>
AT+CSIL=?	Test command reports the supported range of values for parameter <mode></mode>

3.5.7.1.89. Setting time format

80000ST10025a Rev. 10 - 2011-02-17

+CSTF - setting time format	SELINT 2
AT+CSTF=[<mode>]</mode>	This command sets the time format of the time information presented to the user, which is specified by use of the <mode></mode> parameter. The <mode></mode> affects the time format on the phone display and doesn't affect the time format of the AT command serial interface, so it not actually not used. Parameters: <mode>:</mode> 1 HH:MM (24 hour clock; default) 2 HH:MM a.m./p.m.
AT+CSTF?	Read command reports the currently selected <mode> in the format: +CSTF: <mode></mode></mode>
AT+CSTF=?	Test command reports the supported range of values for parameter <mode></mode>

3.5.7.1.90. Call deflection

+CTFR - Call deflection SELINT	
AT+CTFR= <number>[,<type>]</type></number>	Set command is used to request a service that causes an incoming alerting call to be forwarded to a specified number. This is based on the GSM/UMTS supplementary service CD (Call Deflection; refer 3GPP TS 22.072).
	Parameters: <number>: string type phone number of format specified by <type></type></number>
	<type>: type of address octet in integer format; default 145 when dialling string includes international access code character "+", otherwise 129</type>
	Note: Call Deflection is only applicable to an incoming voice call
AT+CTFR=?	Test command tests for command existence

3.5.7.1.91. Time Zone reporting

80000ST10025a Rev. 10 - 2011-02-17

+CTZR - Time Zone reporting	SELINT 2	
AT+CTZR= <onoff></onoff>	This command enables and disables the time zone change event reporting. If the reporting is enabled the MT returns the unsolicited result code +CTZV: <tz> whenever the time zone is changed. Parameters: <onoff>: 0 Disable time zone change event reporting (default) 1 Enable time zone change event reporting</onoff></tz>	
AT+CTZR?	Read command reports the currently selected <onoff></onoff> in the format: +CTZR: <onoff></onoff>	
AT+CTZR=?	Test command reports the supported range of values for parameter <onoff></onoff>	

3.5.7.1.92. Automatic Time Zone update - +CTZU

+CTZU – automatic Time Zor	+CTZU – automatic Time Zone update SELINT 2		
AT+CTZU= <onoff></onoff>	This command enables and disables automatic time zone update via NITZ. Parameters: <onoff>:</onoff> 0 Disable automatic time zone update via NITZ (default) 1 Enable automatic time zone update via NITZ Note: despite of the name, the command AT+CTZU=1 enables automatic update of the date and time set by AT+CCLK command (not only time zone). This happens when a Network Identity and Time Zone (NITZ) message is sent by the network. This command is the ETSI standard equivalent of Telit custom command AT#NITZ=1. If command AT+CTZU=1 (or both) has been issued, NITZ message will cause a date and time update.		
AT+CTZU?	Read command reports the currently selected <onoff></onoff> in the format: +CTZU: <onoff></onoff>		
AT+CTZU=?	Test command reports the supported range of values for parameter <onoff></onoff>

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

3.5.7.1.93. Generic SIM access - +CSIM

+CSIM - Generic SIM	access SELINT 0 / 1 / 2
AT+CSIM= <lock></lock>	Between two successive +CSIM command the SIM-ME interface must be locked to avoid commands can modify wrong SIM file. The locking and unlocking of the SIM-ME interface must be done explicitly respectively at the beginning and at the end of the +CSIM commands sequence. Parameters: <lock>=1 locking of the interface <lock>=0 unlocking of the interface In case that TE application does not use the unlock command in a certain</lock></lock>
AT OCIMA Law with	timeout value, ME releases the locking.
AT+CSIM= <length>, <command/></length>	The ME shall send the < command > as it is to the SIM. As response to the command, ME sends back the actual SIM < response > to the TA as it is.
	Parameters:
	<pre><lenght>: number of the characters that are sent to TE in <command/> or <response> (two times the actual length of the command or response) <command/>: command passed on by the ME to the SIM in the format as described in GSM 11.11 (hexadecimal character format)</response></lenght></pre>
	The response of the command is in the format: +CSIM: <length>,<response></response></length>
	where: < response > : response to the command passed on by the SIM to the ME in the format as described in GSM 11.11 (hexadecimal character format).
	Error case: <i>+CME ERROR: <err></err></i> possible <err> values (numeric format followed by verbose format):</err>
	3 operation not allowed <i>(operation mode is not allowed by the ME, wrong interface lock/unlock status)</i>
	4 operation not supported <i>(wrong format or parameters of the command)</i>

80000ST10025a Rev. 10 - 2011-02-17

	the GSM application. They will be automatically reco	
	unlocking of the SIM-ME interface. After the unlockir	-
	interface if PIN is required it will be necessary to ent	er it another time.

3.5.7.2. AT Run Commands

3.5.7.2.1. Enable SMS Run AT Service - #SMSATRUN

#SMSATRUN – Enable SMS AT Run service		SELINT 2	
AT#SMSATRUN=	Set command enables/disables the SMS AT RUN service.		
<mod></mod>			
	Parameter:		
	< mod >		
	0: Service Disabled		
	1: Service Enabled		

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 377 of 604

80000ST10025a Rev. 10 - 2011-02-17

#SMSATRUN – Enable	SMS AT Run service SELINT 2		
	Note1: When the service is active on a specific AT instance (see AT#SMSATRUNCFG), that instance cannot be used for any other scope, except for OTA service that has the highest priority. For example in the multiplexer request to establish the Instance, the request will be rejected.		
	Note2: the current settings are stored in NVM.		
AT#SMSATRUN?	Read command returns the current settings of <mode> and the value of <stat> in the format:</stat></mode>		
	# SMSATRUN: <mod>,<stat></stat></mod>		
	where: <stat></stat> - service status 0 - not active 1 - active		
AT#SMSATRUN =?	Test command returns the supported values for the SMSATRUN parameters		
Notes:	 By default the SMS ATRUN service is disabled It can be activated either by the command AT#SMSATRUN or receiving a special SMS that can be sent from a Telit server. 		

3.5.7.2.2. Set SMS Run AT Service parameters - #SMSATRUNCFG

#SMSATRUNCFG – Set S	MS AT Run Parameters			
AT#SMSATRUNCFG=	Set command configures the SMS AT RUN service.			
<instance></instance>				
[, <urcmod></urcmod>	Parameter:			
[, <timeout>]]</timeout>	<instance>:</instance>			
	AT instance that will be used by the service to run the AT Command.			
	Range 2 - 3, default 3.			
	<urcmod>:</urcmod>			
	0 – disable unsolicited message			
	1 - enable an unsolicited message when an AT command is requested via SMS (default).			
	When unsolicited is enabled, the AT Command requested via SMS $$ is			

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

#SMSATRUNCFG – Set SMS AT Run Parameters		
	indicated to TE with unsolicited result code:	
	#SMSATRUN: <text></text>	
	e.g.: #SMSATRUN: AT+CGMR;+CGSN;+GSN;+CCLK	
	Unsolicited is dumped on the instance that requested the service activation.	
	<timeout>: It defines in minutes the maximum time for a command execution. If timeout expires the module will be rebooted. Range 1 – 60, default 5.</timeout>	
	Note 1: the current settings are stored in NVM.	
	Note 2: the instance used for the SMS AT RUN service is the same used for the EvMoni service. Therefore, when the #SMSATRUNCFG sets the <instance> parameter, the change is reflected also in the <instance> parameter of the #ENAEVMONICFG command, and viceversa.</instance></instance>	
	Note 3: the set command returns ERROR if the command AT#ENAEVMONI? returns 1 as <mod> parameter or the command AT#SMSATRUN? returns 1 as <mod> parameter</mod></mod>	
AT#SMSATRUNCFG?	Read command returns the current settings of parameters in the format:	
	#SMSATRUNCFG: <instance>,<urcmod>,<timeout></timeout></urcmod></instance>	
AT#SMSATRUNCFG=?	Test command returns the supported values for the SMSATRUNCFG parameters	

3.5.7.2.3. SMS AT Run White List - #SMSATWL

#SMSATWL – SMS AT Run White List		SELINT 2
AT#SMSATWL=	Set command to handle the white list.	
<action></action>		
, <index></index>	<action>:</action>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

3.5.7.2.5. TCP Run AT Service in listen (server) mode - #TCPATRUNL

#TCPATRUNI - Enable	es TCP AT Run Service in listen (server) mode SELINT 2
AT#TCPATRUNL=	Set command enables/disables the TCP AT RUN service in server mode.
<mod></mod>	When this service is enabled, the module tries to put itself in TCP listen state.
	Parameter: < mod > 0: Service Disabled
	1: Service Enabled
	Note1: If SMSATRUN is active on the same instance (see AT#TCPATRUNCFG) the command will return ERROR.
	Note2: when the service is active it is on a specific AT instance (see AT#TCPATRUNCFG), that instance cannot be used for any other scope. For example, if the multiplexer requests to establish the Instance, the request will be rejected.
	Note3: the current settings are stored in NVM.
	Note4: to start automatically the service when the module is powered- on, the automatic PDP context activation has to be set (see AT#SGACTCFG command).
AT#TCPATRUNL?	Read command returns the current settings of <mode> and the value of <stat> in the format:</stat></mode>
	#TCPATRUNL: <mod>,<stat></stat></mod>
	where: < stat> - connection status 0 – not in listen
	1 - in listen or active

80000ST10025a Rev. 10 - 2011-02-17

#TCPATRUNL - Enables	TCP AT Run Service in listen (server) mode	SELINT 2
AT#TCPATRUNL =?	Test command returns the supported values for the TCPATF	RUNL
	parameters	

3.5.7.2.6. TCP AT Run Firewall List - #TCPATRUNFRWL

# TCPATRUNFRWL – TCP AT	Run Firewall List SELINT 2
AT# <i>TCPATRUNFRWL</i> =	Set command controls the internal firewall settings for the
<action>,</action>	TCPATRUN connection.
<ip_addr>,</ip_addr>	
<net_mask></net_mask>	Parameters:
	<action> - command action</action>
	0 - remove selected chain
	1 - add an ACCEPT chain
	2 - remove all chains (DROP everything); <ip_addr> and</ip_addr>
	<net_mask> has no meaning in this case.</net_mask>
	<pre><ip_addr> - remote address to be added into the ACCEPT chain;</ip_addr></pre>
	string type, it can be any valid IP address in the format:
	XXX.XXX.XXX
	<pre><net_mask> - mask to be applied on the <ip_addr>; string type, it</ip_addr></net_mask></pre>
	can be any valid IP address mask in the format:
	XXX.XXX.XXX
	Command returns OK result code if successful.
	Firewall general policy is DROP , therefore all packets that are not included into an ACCEPT chain rule will be silently discarded.
	When a packet comes from the IP address incoming_IP , the firewall chain rules will be scanned for matching with the following criteria:
	incoming_IP & <net_mask> = <ip_addr> & <net_mask></net_mask></ip_addr></net_mask>
	If criteria is matched, then the packet is accepted and the rule scan is finished; if criteria is not matched for any chain the packet is silently dropped.
	Note1: A maximum of 5 firewall can be present at same time in the List.
	Note2: the firewall list is saved in NVM

80000ST10025a Rev. 10 - 2011-02-17

# TCPATRUNFRWL – TCP AT	Run Firewall List SELINT	2

	ОК	
AT#TCPATRUNFRWL=?	Test command returns the allowed values for parameter <action< th=""><th>۱>.</th></action<>	۱>.

3.5.7.2.7. TCP AT Run Authentication Parameters List - #TCPATRUNAUTH

# TCPATRUNAUTH – TCP AT	Run Authentication Parameters List SELINT 2
AT# TCPATRUNAUTH=	Execution command controls the authentication parameters for
<action>,</action>	the TCPATRUN connection.
<userid>,</userid>	
<passw></passw>	Parameters:
	<action> - command action</action>
	0 - remove selected chain
	1 - add an ACCEPT chain
	2 - remove all chains (DROP everything); < userid > and <
	passw > has no meaning in this case.
	 user to be added into the ACCEPT chain; string type, maximum length 50
	<pre>< passw > - password of the user on the < userid >; string type, maximum length 50</pre>
	Command returns OK result code if successful.
	Note1: A maximum of 3 entry (password and userid) can be present at same time in the List.
	Note2: the Authentication Parameters List is saved in NVM.
AT# <i>TCPATRUNAUTH</i> ?	Read command reports the list of all ACCEPT chain rules registered in the Authentication settings in the format:
	#TCPATRUNAUTH: <user_id>,<passw></passw></user_id>
	#TCPATRUNAUTH: <user_id>,<passw></passw></user_id>

3.5.7.2.8. **TCP AT Run** in dial (client) mode - **#TCPATRUND**

#TCPATRUND - Enables	TCP Run AT Service in dial (client) mode SELINT 2
AT#TCPATRUND= <mod></mod>	Set command enables/disables the
	TCP AT RUN service in client mode. When this service is enabled,
	the module tries to open a connection to the Host (the Host is
	specified in AT#TCPATRUNCFG).
	Parameter:
	< mod >
	0: Service Disabled
	1: Service Enabled
	Note1: If SMSATRUN is active on the same instance (see
	AT#TCPATRUNCFG) the command will return ERROR.
	Note2: when the service is active it is on a specific AT instance (see
	AT#TCPATRUNCFG), that instance cannot be used for any other
	scope. For example if the multiplexer request to establish the
	Instance, the request will be rejected.
	Note3: the current setting are stored in NVM
	Note4: to start automatically the service when the module is
	powered-on, the automatic PDP context activation has to be set (see AT#SGACTCFG command).
	Note5: if the connection closes or at boot, if service is enabled and
	context is active, the module will try to reconnect for the number of
	attempts specified in AT#TCPATRUNCFG; also the delay between
	one attempt and the other will be the one specified in
	AT#TCPATRUNCFG.
AT# TCPATRUND?	Read command returns the current settings of <mode> and the value of <stat> in the format:</stat></mode>

3.5.7.2.11. TCP Run AT service to a serial port - #TCPATCONSER

#TCPATCONSER – Connect	ts the TCP Run AT service to a serial port SELINT 2
<u>#TCPATCONSER - Connec</u> AT#TCPATCONSER= <port>,<rate></rate></port>	ts the TCP Run AT service to a serial port SELINT 2 Set command sets the TCP Run AT in transparent mode, in order to have direct access to the serial port specified. Data will be transferred directly, without being elaborated, between the TCP Run AT service and the serial port specified. If the CMUX protocol is running the command will return ERROR. Parameter: < port > 0 - 1. Serial port to connect to. < rate > baud rate for data transfer. Allowed values are 300,1200,2400,4800,9600,19200,38400,57600,115200. Note1: the command has to be issued from the TCP ATRUN instance Note2: After this command has been issued, if no error has occurred, then a "CONNECT" will be returned by the module to advise that the TCP ATRUN instance is in <i>online mode</i> and connected to the port specified. Note3: To exit from online mode and close the connection, the escape sequence (+++) has to be sent on the TCP ATRUN instance
AT# TCPATCONSER =?	Test command returns the supported values for the TCPATCONSER parameters

3.5.7.2.12. Run AT command execution - #ATRUNDELAY

#ATRUNDELAY - Set the	delay on Run AT command execution SELINT 2
AT#ATRUNDELAY= <srv>,<delay></delay></srv>	Set command enables the use of a delay before the execution of AT command received by Run AT service (TCP and SMS). It affects just AT commands given through Run AT service.
	<srv> 0 – TCP Run AT service 1 - SMS Run AT service</srv>
	<delay> Value of the delay, in seconds. Range 030. Default value 0 for both services (TCP and SMS).</delay>

80000ST10025a Rev. 10 - 2011-02-17

#ATRUNDELAY - Set the	delay on Run AT command execution SELINT 2	
	Note1 - The use of the delay is recommended to execute some AT commands that require network interaction or switch between GSM and GPRS services. For more details see the RUN AT User Guide.	
	Note2: The delay is valid till a new AT#ATRUNDELAY is set.	
AT#ATRUNDELAY?	Read command returns the current settings of parameters in the format: #ATRUNDELAY: 0, <delaytcp> #ATRUNDELAY: 1, <delaysms> OK</delaysms></delaytcp>	
AT#ATRUNDELAY=?	Test command returns the supported values for the ATRUNDELAY parameters	

3.5.7.2.13. Enable EvMoni Service - #ENAEVMONI

#ENAEVMONI – Enab	le EvMoni Service SELINT 2
AT#ENAEVMONI= <mod></mod>	Set command enables/disables the EvMoni service.
	Parameter:
	< mod >
	0: Service Disabled (default)
	1: Service Enabled
	Note1: When the service is active on a specific AT instance, that instance cannot be used for any other scope, except for OTA service that has the highest priority. For example in the multiplexer request to establish the Instance, the request will be rejected.
	Note2: the current settings are stored in NVM.
AT#ENAEVMONI?	Read command returns the current settings of <mode> and the value of <stat> in the format:</stat></mode>
	# ENAEVMONI: <mod>,<stat></stat></mod>
	where: <stat></stat> - service status 0 - not active (default) 1 - active

3.5.7.3.4. Saves IP port and IP address for OTA over IP - #OTAIPCFG

#OTAIPCFG – Saves IP port and IP address for OTA over IP SELINT 0/1		
AT#OTAIPCFG= <iport>,<ipa< th=""><th>This command saves in NVM th</th><th>ne IP port number and IP address of</th></ipa<></iport>	This command saves in NVM th	ne IP port number and IP address of
ddr>[, <unused>]</unused>	the OTA server.	

80000ST10025a Rev. 10 - 2011-02-17

	Parameters: <iport>: IP port of the OTA server <ipaddr>: IP address of the OTA server, string type. This parameter can be any valid IP address in the format: "xxx.xxx.xxx.xxx" Note: the values set by the command are directly stored in NVM and don't depend on the specific CMUX instance. Note2: a special form of the Set command, #OTAIPCFG=<iport>,"" sets the IP address to "0.0.0.0".</iport></ipaddr></iport>
AT#OTAIPCFG?	Read command reports the currently selected <iport> and <ipaddr> in the format: #OTAIPCFG: <iport>,<ipaddr>,0</ipaddr></iport></ipaddr></iport>
AT#OTAIPCFG	Execution command has the same effect as the Read command
AT#OTAIPCFG =?	Test command reports the range of supported values for parameters <iport></iport> and <unused></unused>

#OTAIPCFG – Saves IP port a	and IP address for OTA over IP SELINT 2
AT#OTAIPCFG= <iport>,<ipa ddr>[,<unused>]</unused></ipa </iport>	This command saves in NVM the IP port number and IP address of the OTA server.
	Parameters: <iport>: IP port of the OTA server <ipaddr>: IP address of the OTA server, string type. This parameter can be any valid IP address in the format: "xxx.xxx.xxx.xxx"</ipaddr></iport>
	Note: the values set by the command are directly stored in NVM and don't depend on the specific CMUX instance.
	Note2: a special form of the Set command, #OTAIPCFG= <iport>,"" sets the IP address to "0.0.0.0".</iport>
AT#OTAIPCFG?	Read command reports the currently selected <iport></iport> and <ipaddr></ipaddr> in the format:
	#OTAIPCFG: <iport>,<ipaddr>,0</ipaddr></iport>

AT#0TAIPCFG=?	Test command reports the range of supported values for
	parameters <iport> and <unused></unused></iport>

3.5.7.3.5. Starts an OTA Update over IP - #OTAIPUPD

#OTAIPUPD – Starts an	TA Update over IP SELINT 0/1/2
AT#OTAIPUPD	This command starts an OTA Update over IP.
	Note: in order to complete the update, the device has to be registered in the OTA server.
	Note: it is necessary to set some parameters beforehand: the bearer (CSD or GPRS) and the APN, through the command AT#OTASNAPIPCFG, the IP port and IP address, through the command AT#OTAIPCFG.
	After the command AT#OTAIPUPD has been set, some unsolicited messages will inform the user about the status of the update process:
	 #OTAEV: Start Fw Download #OTAEV: Fw Download Complete #OTAEV: Module Upgraded To New FW #OTAEV: Server notified about successfull FW Upgrade
	Or, in case of failure:
	- #OTAEV: OTA FW Upgrade Failed
AT#OTAIPUPD?	Read command reports the current status of the OTA over IP: the value 1 is returned if the OTA over IP is running (in this case the user shall receive the unsolicited messages), 0 otherwise.
	#OTAIPUPD: <status></status>
AT#OTAIPUPD =?	Test command tests for command existence

3.5.7.3.6. OTA Set IP port and address for OTA over IP - #OTASNAPIP

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

80000ST10025a Rev. 10 - 2011-02-17

#OTASNAPIP – OTA S	Set IP port and address for OTA over IP SELINT 0/1
AT#OTASNAPIP= <iport>,<ipaddr>[,< mynumber>[,<comp any_name>[,<unuse d>]]]</unuse </comp </ipaddr></iport>	Set command specifies the IP port number and IP address that the module has to use to send the Remote Registration message. If the current IMSI hasn't been yet registered, the Remote Registration message is automatically sent.
	Parameters: <iport> - IP port of the OTA server <ipaddr> - IP address of the OTA server, string type. This parameter can be any valid IP address in the format: "xxx.xxx.xxx" <mynumber> - string parameter which specifies the phone number of the client <company_name> - string parameter containing a client identifier</company_name></mynumber></ipaddr></iport>
	Note1: the command returns ERROR if the APN has not been set through the command AT#OTASNAPIPCFG
	Note2: a special form of the Set command, #OTASNAP=<iport>,""</iport> , sets the IP address to "0.0.0.0".
	Note3: the values of <iport></iport> and <ipaddr></ipaddr> parameters can be overwritten from the OTA server by any SMS (Command, RSA Discovery Registration)
	Note4: a change of the value of <company_name></company_name> parameter causes a new FOTA Registration procedure
	Note5: if the <company_name></company_name> is an empty string, an ERROR is returned
	Note6: all the settings are saved in NVM but < mynumber >
AT#OTASNAPIP?	Read command reports the current settings in the format:
	#OTASNAPIP: <iport>,<ipaddr>[,<company_name>],0</company_name></ipaddr></iport>

	#OTASNAPIPCFG:	
	<bearer>,<apn>[,<username>[,<password>[,<rsptimeout>]]]</rsptimeout></password></username></apn></bearer>	
AT#0TASNAPIPCFG	Execution command has the same effect as the Read command	
AT#OTASNAPIPCFG =?	Test command returns the range for <bearer></bearer> values, the maximum length of <apn>, <username></username></apn> and <password></password> string parameters and the range for <rsptimeout></rsptimeout> values. The format is:	
	#OTASNAPIPCFG: (0-2),99,49,49,(0-65535)	

#OTASNAPIPCFG – O	TA Set Access Point Name for OTA over IP SELINT 2		
AT#OTASNAPIPCFG			
=	module has to use to send the Remote Registration message.		
<pre><bearer>,<apn>[,<u< pre=""></u<></apn></bearer></pre>	The APN is the Access Point Name in case of GPRS bearer or the internet		
sername>, <passwor< th=""><th colspan="2">service provider number in case of GSM bearer.</th></passwor<>	service provider number in case of GSM bearer.		
d>[, <rsptimeout>]]</rsptimeout>			
	Parameters:		
	 bearer>		
	0 – Undefined (default value)		
	1 – GSM		
	2 - GPRS		
	<apn></apn> - string parameter; in case of GPRS bearer: Access Point Name, a logical name that is used to select the GGSN or the external packet data network; in case of GSM bearer: phone number of the internet service provider		
	<username> - string parameter, used only if the context requires it</username>		
	<password> - string parameter, used only if the context requires it</password>		
	<rsptimeout></rsptimeout> - used when waiting for a response from OTA server, after the module has sent a message: if there's no response within this timeout period the TCP connection is closed. 0 - no timeout		

page 411 of 604

80000ST10025a Rev. 10 - 2011-02-17

#OTASNAPIPCFG – 0	TA Set Access Point Name for OTA over IP SELINT 2	
	165535 - timeout value in seconds (default 300 s.)	
	Note1: if the <bearer></bearer> is set to 0, then the APN is erased. If the bearer is already 0, any <apn></apn> or <username></username> or <password></password> will not be set	
	Note2: the values of <bearer>, <apn>, <username></username></apn></bearer> and <password></password> parameters can be overwritten from the OTA server by any SMS (Command, RSA Discovery Registration)	
	Note3: all the settings are saved in NVM	
AT#OTASNAPIPCFG ?	Read command reports the current settings in the format:	
	#OTASNAPIPCFG:	
	<bearer>,<apn>[,<username>[,<password>[,<rsptimeout>]]]</rsptimeout></password></username></apn></bearer>	
AT#OTASNAPIPCFG =?	Test command returns the range for <bearer></bearer> values, the maximum length of <apn>, <username></username></apn> and <password></password> string parameters and the range for <rsptimeout></rsptimeout> values. The format is:	
	#OTASNAPIPCFG: (0-2),99,49,49,(0-65535)	

3.5.7.4. Multisocket AT Commands

3.5.7.4.1. Socket Status - #SS

<mark>#SS - Socket Status</mark>	SELINT 2	
AT#SS[= <connid>]</connid>	Execution command reports the current status of the socket:	
	Parameters:	
	<connld> - socket connection identifier</connld>	
	16	
	The response format is:	
	#SS: <connid>,<state>,<locip>,<locport>,<remip>,<remport></remport></remip></locport></locip></state></connid>	
	where:	
	<connld> - socket connection identifier, as before</connld>	

80000ST10025a Rev. 10 - 2011-02-17

<mark>#SS - Socket Status</mark>	SELINT 2
	<state> - actual state of the socket:</state>
	0 - Socket Closed.
	1 - Socket with an active data transfer connection.
	2 - Socket suspended.
	3 - Socket suspended with pending data.
	4 - Socket listening.
	5 - Socket with an incoming connection. Waiting for the user accept or shutdown command.
	<locip> - IP address associated by the context activation to the socket.</locip> <locport> - two meanings:</locport>
	- the listening port if we put the socket in listen mode.
	- the local port for the connection if we use the socket to connect to a remote machine.
	<remip> - when we are connected to a remote machine this is the remote IP address.</remip>
	<remport> - it is the port we are connected to on the remote machine.</remport>
	Note: issuing #SS<cr></cr> causes getting information about status of all the sockets; the response format is:
	#SS: <connid1>,<state1>,<locip1>,<locport1>,<remip1>,<remport1> <cr><lf></lf></cr></remport1></remip1></locport1></locip1></state1></connid1>
	 #SS: <connid6>,<state6>,<locip6>,<locport6>,<remip6>,<remport6></remport6></remip6></locport6></locip6></state6></connid6>
AT#SS=?	Test command reports the range for parameter <connld>.</connld>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

80000ST10025a Rev. 10 – 2011-02-17

#SS - Socket Status	SELINT 2
Example	AT#SS #SS: 1,3,91.80.90.162,61119,88.37.127.146,10510 #SS: 2,4,91.80.90.162,1000 #SS: 3,0 #SS: 4,0 #SS: 5,3,91.80.73.70,61120,88.37.127.146,10509 #SS: 6,0
	Socket 1: opened from local IP 91.80.90.162/local port 61119 to remote IP 88.37.127.146/remote port 10510 is suspended with pending data Socket 2: listening on local IP 91.80.90.162/local port 1000 Socket 5: opened from local IP 91.80.73.70/local port 61120 to remote IP 88.37.127.146/remote port 10509 is suspended with pending data
	AT#SS=2 #SS: 2,4,91.80.90.162,1000 OK We have information only about socket number 2

3.5.7.4.2. Socket Info - #SI

<mark>#SI - Socket Info</mark>	SELINT 2
AT#SI[= <connid>]</connid>	Execution command is used to get information about socket data traffic.
	Parameters:
	<connld> - socket connection identifier</connld>
	16
	The response format is:
	#SI: <connid>,<sent>,<received>,<buff_in>,<ack_waiting></ack_waiting></buff_in></received></sent></connid>
	where:
	<connld> - socket connection identifier, as before</connld>
	<sent> - total amount (in bytes) of sent data since the last time the socket</sent>

80000ST10025a Rev. 10 - 2011-02-17

<mark>#SI - Socket Info</mark>	SELINT 2
	<pre>connection identified by <connld> has been opened <received> - total amount (in bytes) of received data since the last time the socket connection identified by <connld> has been opened <buff_in> - total amount (in bytes) of data just arrived through the socket connection identified by <connld> and currently buffered, not yet read <ack_waiting> - total amount (in bytes) of sent and not yet acknowledged data since the last time the socket connection identified by <connld> has been opened Note: not yet acknowledged data are available only for TCP connections; the value <ack_waiting> is always 0 for UDP connections. Note: issuing #SI<cr> causes getting information about data traffic of all the sockets; the response format is: #SI: <connld1>,<sent1>,<received1>,<buff_in1>,<ack_waiting1> <cr><lf> #SI: <connld6>,<sent6>,<received6>,<buff_in6>,<ack_waiting6></ack_waiting6></buff_in6></received6></sent6></connld6></lf></cr></ack_waiting1></buff_in1></received1></sent1></connld1></cr></ack_waiting></connld></ack_waiting></connld></buff_in></connld></received></connld></pre>
AT#SI=? Example	Test command reports the range for parameter <connld>.</connld>
Lxampte	<pre>#SI: 1,123,400,10,50 #SI: 2,0,100,0,0 #SI: 3,589,100,10,100 #SI: 4,0,0,0,0 #SI: 5,0,0,0,0 #SI: 6,0,98,60,0 OK Sockets 1,2,3,6 are opened with some data traffic. For example socket 1 has 123 bytes sent, 400 bytes received, 10 byte waiting to be read and 50 bytes waiting to be acknowledged from the remote side. AT#SI=1 #SI: 1,123,400,10,50</pre>
	OK We have information only about socket number 1

3.5.7.4.3. Context Activation - #SGACT

80000ST10025a Rev. 10 - 2011-02-17

#SGACT - Context A	Activation	SELINT 2
AT#SGACT= <cid>,</cid>	Execution command is used to activate or deactivate eithe	r the GSM context
<stat>[,<userid>,</userid></stat>	or the specified PDP context.	
<pwd>]</pwd>		
	Parameters:	
	<cid> - PDP context identifier</cid>	
	0 - specifies the GSM context	
	15 - numeric parameter which specifies a particular PD definition	P context
	<stat></stat>	
	0 - deactivate the context	
	1 - activate the context	
	<pre><userid> - string type, used only if the context requires it</userid></pre>	
	<pwd> - string type, used only if the context requires it</pwd>	
	Note: context activation/deactivation returns ERROR if the socket associated to it (see AT#SCFG).	ere is not any
	Note: after the GSM context has been activated, you can us Multisocket, or FTP or Email AT commands to send/receiv via GSM.	
	Note: to deactivate the GSM context, AT#SGACT=0,0 has to same serial port used when the context was activated.	to be issued on the
	Note: GSM context activation is affected by AT+CBST com particular, GSM context activation is just allowed with "nor data calls.	
	Note: activating a GSM context while a PDP context is alre causes the PDP context to be suspended.	ady activated
	Note: if GSM context is active, it is not allowed any PDP co	ntext activation.
AT#SGACT?	Returns the state of all the contexts that have been define commands +CGDCONT or #GSMCONT	d through the
	#SGACT: <cid1>,<stat1><cr><lf></lf></cr></stat1></cid1>	
	 #SGACT: <cid5>,<stat5></stat5></cid5>	
	where:	
	<cid<i>n> - as <cid> before</cid></cid<i>	
	< stat <i>n</i> > - context status

page 416 of 604

80000ST10025a Rev. 10 - 2011-02-17

#SGACT - Context Ac	tivation	SELINT 2
	0 - context deactivated	
	1 - context activated	
AT#SGACT=?	Test command reports the range for the parameters <cid></cid> and <stat></stat>	
Note	It is strongly recommended to use the same command (e.g	. #SGACT) to
	activate the context, deactivate it and interrogate about its	status.

3.5.7.4.4. Socket Shutdown - #SH

#SH - Socket Shutdown SELI		SELINT 2
AT#SH= <connld></connld>	This command is used to close a socket. Parameter: <connld> - socket connection identifier 16</connld>	
AT#SH=?	Test command reports the range for parameter <connld></connld> .	

3.5.7.4.5. Socket Configuration - #SCFG

#SCFG - Socket Con	figuration	SELINT 2
AT#SCFG=	Set command sets the socket configuration parameters.	
<connld>,<cid>,</cid></connld>		
<pktsz>,<maxto>,</maxto></pktsz>	Parameters:	
<connto>,<txto></txto></connto>	<connld> - socket connection identifier</connld>	
	16	
	<cid> - PDP context identifier</cid>	
	0 - specifies the GSM context	
	15 - numeric parameter which specifies a particular PD definition	P context
	<pktsz></pktsz> - packet size to be used by the TCP/UDP/IP stack 0 - select automatically default value(300). 11500 - packet size in bytes.	for data sending.
	<pre><maxto> - exchange timeout (or socket inactivity timeout)</maxto></pre>	, if there's po
	data exchange within this timeout period the connection is 0 - no timeout	
	165535 - timeout value in seconds (default 90 s.)	
	connTo> - connection timeout; if we can't establish a con remote within this timeout period, an error is ra	ised.
	101200 - timeout value in hundreds of milliseconds (defa <txto> - data sending timeout; after this period data are s they're less than max packet size.</txto>	•

80000ST10025a Rev. 10 - 2011-02-17

#SCFG - Socket	Configuration	SELINT 2
	0 - no timeout 1255 - timeout value in hundreds of milliseconds (default 50)
AT#SCFG?	Note: these values are automatically saved in NVM.Read command returns the current socket configurafor all the six sockets, in the format:#SCFG: <connld1>,<cid1>,<pktsz1>,<maxto1>,<co< td=""><cr><lf></lf></cr></co<></maxto1></pktsz1></cid1></connld1>	
	#SCFG: <connld6>,<cid6>,<pktsz6>,<maxto6>,<co <cr><lf></lf></cr></co </maxto6></pktsz6></cid6></connld6>	
AT#SCFG=?	Test command returns the range of supported values subparameters.	s for all the
Example	at#scfg? #SCFG: 1,1,300,90,600,50 #SCFG: 2,2,300,90,600,50 #SCFG: 3,2,250,90,600,50 #SCFG: 4,1,300,90,600,50 #SCFG: 5,1,300,90,600,50 #SCFG: 6,1,300,90,600,50	

3.5.7.4.6. Socket Configuration Extended - #SCFGEXT

#SCFGEXT - Socket Configuration	on Extended SELINT 2
AT#SCFGEXT=	Set command sets the socket configuration extended
<conned>,<i><srmode>,</srmode></i></conned>	parameters.
<recvdatamode>,</recvdatamode>	
<keepalive>,</keepalive>	Parameters:
[, <i><listenautorsp></listenautorsp></i>	<connld> - socket connection identifier</connld>
[, <senddatamode>]</senddatamode>	16
]	
	<srmode> - SRing unsolicited mode</srmode>
	0 - Normal (default):
	SRING : <connid> where <connid> is the socket connection</connid></connid>
	identifier
	1 – Data amount:
	SRING : <connid>,<recdata> where <recdata> is the amount</recdata></recdata></connid>

80000ST10025a Rev. 10 - 2011-02-17

	of data received on the socket connection number <connld> 2 - Data view: SRING : <connld>,<recdata>,<data> same as before and <data> is data received displayed following <datamode> value <recvdatamode> - data view mode for received data in command mode(AT#SRECV or <srmode> = 2) 0- text mode (default) 1- hexadecimal mode <keepalive> - Set the TCP Keepalive value in minutes 0 - Deactivated (default) 1 - 240 - Keepalive time in minutes</keepalive></srmode></recvdatamode></datamode></data></data></recdata></connld></connld>
	<listenautorsp> - Set the listen auto-response mode, that affects the commands AT#SL and AT#SLUDP 0 - Deactivated (default) 1 - Activated <senddatamode> - data mode for sending data in command mode(AT#SSEND) 0 - data represented as text (default) 1 - data represented as sequence of hexadecimal numbers (from 00 to FF) Each octet of the data is given as two IRA character long</senddatamode></listenautorsp>
	hexadecimal number Note: these values are automatically saved in NVM. Note: Keepalive is available only on TCP connections. Note: for the behaviour of AT#SL and AT#SLUDP in case of auto-response mode or in case of no auto-response mode, see the description of the two commands.
AT#SCFGEXT?	Read command returns the current socket extended configuration parameters values for all the six sockets, in the format:

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 419 of 604

	#SCFGEXT: <connld1>, <srmode1>,<datamode1>,<i><keepalive1>,</keepalive1></i> <i><listenautorsp1>,0</listenautorsp1></i><cr><lf> #SCFGEXT:<connld6>, <srmode6>,<datamode6>,<i><keepalive6>,</keepalive6></i> <i><listenautorsp6>,0</listenautorsp6></i><cr><lf></lf></cr></datamode6></srmode6></connld6></lf></cr></datamode1></srmode1></connld1>
AT#SCFGEXT=?	Test command returns the range of supported values for all the subparameters.
Example	Socket 1 set with data view sring, text data mode, a keepalive time of 30 minutes and listen auto-response set. Socket 3 set with data amount sring, hex recv data mode, no keepalive and listen auto-response not set.
	Socket 4 set with hex recv and send data mode at#scfgext? #SCFGEXT: 1,2,0,30,1,0 #SCFGEXT: 2,0,0,0,0,0 #SCFGEXT: 3,1,1,0,0,0 #SCFGEXT: 4,0,1,0,0,1 #SCFGEXT: 5,0,0,0,0,0 #SCFGEXT: 6,0,0,0,0,0 OK

3.5.7.4.7. Socket configuration Extended 2 - #SCFGEXT2

#SCFGEXT2 - Socket Configuration	I Extended
AT#SCFGEXT2= <connid>,<i><</i>bufferStart<i>>,</i> [,<abortconnattempt> [,<unused_b></unused_b></abortconnattempt></connid>	Set command sets the socket configuration extended parameters for features not included in #SCFGEXT command. Parameters:
[, <unused_c>[,<unused_d>]]]]</unused_d></unused_c>	<connld> - socket connection identifier 16</connld>
	<pre><bufferstart> - Set the sending timeout method based on new data received from the serial port. (<txto> timeout value is set by #SCFG command)</txto></bufferstart></pre>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 420 of 604

	Restart of transmission timer will be done when new data are received from the serial port.
	0 - old behaviour for transmission timer
	(#SCFG command 6th parameter old behaviour,
	start only first time if new data are received from the
	serial port)
	1 - new behaviour for transmission timer:
	restart when new data received from serial port
	Note: is necessary to avoid overlapping of the two methods. Enabling new method, the old method for transmission
	timer(#SCFG) is automatically disabled to avoid overlapping.
	Note: check if new data have been received from serial port is done with a granularity that is directly related to #SCFG <txto> setting with a maximum period of 1 sec.</txto>
	<abortconnattempt> - Enable connection attempt(#SD/#SKTD/#SKTOP) abort before CONNECT(online mode) or OK(command mode)</abortconnattempt>
	0 – Not possible to interrupt connection attempt
	1 – It is possible to interrupt the connection attempt
	(<connto> set by #SCFG or</connto>
	DNS resolution running if required)
	and give back control to AT interface by
	reception of a character.
	As soon as the control has been given to the AT interface
	the ERROR message will be received on the interface itself.
	Note: values are automatically saved in NVM.
AT#SCFGEXT2?	Read command returns the current socket extended configuration parameters values for all the six sockets, in the format:
	#SCFGEXT2: <connld1>,<bufferstart1>,0,0,0,0<cr><lf></lf></cr></bufferstart1></connld1>
	#SCFGEXT2: <connid6>,<bufferstart6>,0,0,0,0<cr><lf></lf></cr></bufferstart6></connid6>
AT#SCFGEXT2=?	Test command returns the range of supported values for all the
	subparameters.

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

3.5.7.4.8. Socket Dial - #SD

<mark>#SD - Socket Dial</mark>	SELINT 2
AT#SD= <connld>,</connld>	Execution command opens a remote connection via socket.
<txprot>,<rport>,</rport></txprot>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 422 of 604

80000ST10025a Rev. 10 - 2011-02-17

<mark>#SD - Socket Dial</mark>	SELINT 2
<lpaddr></lpaddr>	Parameters:
[, <closuretype></closuretype>	<connld> - socket connection identifier</connld>
, <lport></lport>	16
, <connmode>]]]</connmode>	<txprot> - transmission protocol</txprot>
	0 - TCP
	1 - UDP
	<rport> - remote host port to contact</rport>
	165535
	<ipaddr></ipaddr> - address of the remote host, string type. This parameter can be
	either:
	 any valid IP address in the format: "xxx.xxx.xxx.xxx"
	 any host name to be solved with a DNS query
	<closuretype> - socket closure behaviour for TCP</closuretype>
	0 - local host closes immediately when remote host has closed (default)
	255 - local host closes after an escape sequence (+++)
	<lport> - UDP connections local port</lport>
	165535
	<connmode> - Connection mode</connmode>
	0 - online mode connection (default)
	1 - command mode connection
	Note: <closuretype></closuretype> parameter is valid for TCP connections only and has
	no effect (if used) for UDP connections.
	Note: <lport></lport> parameter is valid for UDP connections only and has no effer (if used) for TCP connections.
	Note: if we set <connmode></connmode> to online mode connection and the comman is successful we enter in online data mode and we see the intermediate result code CONNECT . After the CONNECT we can suspend the direct
	interface to the socket connection (nb the socket stays open) using the escape sequence (+++): the module moves back to command mode and we receive the final result code OK after the suspension. After such a suspension, it's possible to resume it in every moment (unless the socket
	inactivity timer timeouts, see #SCFG) by using the #SO command with the corresponding <connld></connld> .
	Note: if we set <connmode></connmode> to command mode connection and the command is successful, the socket is opened and we remain in command mode and we see the result code OK .
	Note: if there are input data arrived through a connected socket and not

80000ST10025a Rev. 10 - 2011-02-17

<mark>#SD - Socket Dial</mark>		SELINT 2
	yet read because the module entered command mode bef them (after an escape sequence or after #SD has been iss <connmode></connmode> set to command mode connection), these d and we receive the SRING URC (SRING presentation format the last #SCFGEXT setting); it's possible to read these dat issuing #SRECV . Under the same hypotheses it's possible while in command mode issuing #SSEND Note: resume of the socket(#SO) after suspension or closu has to be done on the same instance on which the socket v through #SD. In fact, suspension has been done on the ins	ued with lata are buffered at depends on a afterwards to send data ure(#SH) was opened
AT#SD=?	Test command reports the range of values for all the para	meters.
Example	Open socket 1 in online mode	
	AT#SD=1,0,80,"www.google.com",0,0,0 CONNECT	
	Open socket 1 in command mode	
	AT#SD=1,0,80,"www.google.com",0,0,1 OK	

3.5.7.4.9. Socket Restore - #SO

<mark>#SO - Socket Resto</mark>	re	SELINT 2
AT#SO= <connld></connld>	Execution command resumes the direct interface to a so which has been suspended by the escape sequence.	cket connection
	Parameter: < connld> - socket connection identifier 16	
AT#S0=?	Test command reports the range of values for <connid></connid>	parameter.

3.5.7.4.10. Socket Listen - #SL

<mark>#SL - Socket Listen</mark>	SELINT 2
AT#SL= <connid>,</connid>	This command opens/closes a socket listening for an incoming TCP
<listenstate>,</listenstate>	connection on a specified port.
<listenport></listenport>	
>[, <closure type="">]</closure>	Parameters:

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 424 of 604

80000ST10025a Rev. 10 - 2011-02-17

<mark>#SL - Socket Listen</mark>	SELINT 2		
	<connld> - socket connection identifier</connld>		
	16		
	listenState> -		
	0 - closes socket listening		
	1 - starts socket listening		
	listenPort> - local listening port		
	165535		
	<closure type=""> - socket closure behaviour for TCP</closure>		
	0 - local host closes immediately when remote host has closed (default) 255 - local host closes after an escape sequence (+++)		
	Note: if successful, the command returns a final result code OK . If the ListenAutoRsp flag has not been set through the command AT#SCFGEXT (for the specific connId), then, when a TCP connection request comes on the input port, if the sender is not filtered by internal firewall (see #FRWL), an URC is received:		
	+SRING : <connid></connid>		
	Afterwards we can use #SA to accept the connection or #SH to refuse it.		
	If the ListenAutoRsp flag has been set, then, when a TCP connection request comes on the input port, if the sender is not filtered by the internal firewall (see command #FRWL), the connection is automatically accepted: the CONNECT indication is given and the modem goes into online data mode .		
	If the socket is closed by the network the following URC is received:		
	#SL: ABORTED		
	Note: when closing the listening socket <listenport> is a don't care parameter</listenport>		
AT#SL?	Read command returns all the actual listening TCP sockets.		
AT#SL=?	Test command returns the range of supported values for all the subparameters.		
Example	Next command opens a socket listening for TCP on port 3500 without.		
	AT#SL=1,1,3500 OK		
L			

3.5.7.4.11. Socket Listen UDP - #SLUDP

#SLUDP - Socket Listen UDP SELINT 2		
	This command opens/closes a socket listening for an incoming UDP	
>,	connection on a specified port.	
<listenstate>,</listenstate>		
<listenport></listenport>	Parameters:	
	<connld> - socket connection identifier</connld>	
	16	
	listenState> -	
	0 - closes socket listening	
	1 - starts socket listening	
	listenPort> - local listening port	
	165535	
	Note: if successful, the command returns a final result code OK . If the ListenAutoRsp flag has not been set through the command AT#SCFGEXT (for the specific connId), then, when an UDP connection request comes on the input port, if the sender is not filtered by internal firewall (see #FRWL), an URC is received:	
	+SRING : <connld></connld>	
	Afterwards we can use #SA to accept the connection or #SH to refuse it.	
	If the ListenAutoRsp flag has been set, then, when an UDP connection request comes on the input port, if the sender is not filtered by the internal firewall (see command #FRWL), the connection is automatically accepted: the CONNECT indication is given and the modem goes into online data mode .	
	If the socket is closed by the network the following URC is received:	
	#SLUDP: ABORTED	
	Note: when closing the listening socket <listenport> is a don't care parameter</listenport>	
AT#SLUDP?	Read command returns all the actual listening UDP sockets.	
AT#SLUDP=?	Test command returns the range of supported values for all the subparameters.

#SLUDP - Socket Li	sten UDP	SELINT 2
Example	Next command opens a socket listening for UDP on port 3. AT#SLUDP=1,1,3500 OK	500.

3.5.7.4.12. Socket Accept - #SA

<mark>#SA - Socket Accept</mark>	SELINT 2
AT#SA= <connld> [,<connmode>]</connmode></connld>	Execution command accepts an incoming socket connection after an URC SRING: <connld></connld>
	Parameter: <connld> - socket connection identifier 16 <connmode> - Connection mode, as for command #SD. 0 - online mode connection (default) 1 - command mode connection</connmode></connld>
	Note: the SRING URC has to be a consequence of a #SL issue.
	Note: setting the command before to having received a SRING will result in an ERROR indication, giving the information that a connection request has not yet been received
AT#SA=?	Test command reports the range of values for all the parameters.

3.5.7.4.13. Receive Data In Command Mode - #SRECV

#SRECV - Receive Data In Command Mode SELINT 2			
AT#SRECV= <connld>, <maxbyte></maxbyte></connld>	Execution command permits the user to read data a connected socket, but buffered and not yet read bec command mode before reading them; the module i a SRING URC, whose presentation format depends setting.	cause the module entered is notified of these data by	
	Parameters: <connld> - socket connection identifier 16 <maxbyte> - max number of bytes to read</maxbyte></connld>		

80000ST10025a Rev. 10 - 2011-02-17

#SRECV - Receiv	e Data In Command Mode SELINT 2		
	11500		
	Note: issuing #SRECV when there's no buffered data raises an error.		
AT#SRECV=?	Test command returns the range of supported values for parameters < connId > and < maxByte >		
Example	SRING URC (<srmode> be 0, <datamode> be 0)</datamode></srmode> telling data have just come through connected socket identified by <connld>=1 and are now buffered SRING: 1</connld>		
	Read in text format the buffered data AT#SRECV=1,15 #SRECV: 1,15 stringa di test		
	ОК		
	SRING URC (<srmode> be 1, <datamode> be 1</datamode></srmode>) telling 15 bytes data have just come through connected socket identified by <connld>=2 and are now buffered SRING: 2,15</connld>		
	Read in hexadecimal format the buffered data AT#SRECV=2,15 #SRECV: 2,15 737472696e67612064692074657374		
	ОК		
	<pre>SRING URC (<srmode> be 2, <datamode> be 0) displaying (in text format) 15 bytes data that have just come through connected socket identified by <connld>=3; it's no necessary to issue #SRECV to read the data; no data remain in the buffer after this URC SRING: 3,15, stringa di test</connld></datamode></srmode></pre>		

3.5.7.4.14. Send Data In Command Mode - #SSEND

#SSEND - Send Dat	a In Command Mode	SELINT 2
AT#SSEND= <connld></connld>	Execution command permits, while the module is in cor send data through a connected socket.	nmand mode, to
	Parameters: < connld> - socket connection identifier 16	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 428 of 604

80000ST10025a Rev. 10 - 2011-02-17

#SSEND - Send Data In Command Mode SELINT 2				
#SSEIND - Seild Dala				
	The device responds to the command with the prompt \rightarrow			
	<greater_than><space> and waits for the data to send.</space></greater_than>			
	To complete the operation send Ctrl-Z char (0x1A hex); to exit withc writing the message send ESC char (0x1B hex).			
	If data are successfully sent, then the response is OK .			
	If data sending fails for some reason, an error code is repo	orted		
	Note: the maximum number of bytes to send is 1024 bytes	for versions till		
	7.03.02/7.02.07 and from 10.0x.xx0 till 10.0x.xx2,			
	1500 bytes for versions starting from 10.0x.xx3			
	; trying to send more data will cause the surplus to be discarded and lo			
	Note: it's possible to use #SSEND only if the connection w	vas opened by		
	#SD , else the ME is raising an error.			
	Note: a byte corresponding to BS char(0x08) is treated with	h its		
	corresponding meaning; therefore previous byte will be ca	ancelled(and BS		
	char itself will not be sent)			
Example	Send data through socket number 2			
'	AT#SSEND=2			
	>Test <ctrl-z></ctrl-z>			
	OK			

3.5.7.4.15. Send data in Command Mode extended - #SSENDEXT

#SSENDEXT - Send	Data In Command Mode extended	SELINT 2
AT#SSENDEXT= <connld>, <bytestosend></bytestosend></connld>	Execution command permits, while the module is in comm send data through a connected socket including all possib (from 0x00 to 0xFF).	
Parameters: <connld> - socket connection identifier 16 < bytestosend > - number of bytes to be sent Please refer to test command for range</connld>		

80000ST10025a Rev. 10 - 2011-02-17

#SSENDEXT - Send D	ata In Command Mode extended SELINT 2	
	The device responds to the command with the prompt '>' <greater_than><space> and waits for the data to send. When <bytestosend> bytes have been sent, operation is automatically completed. If data are successfully sent, then the response is OK. If data sending fails for some reason, an error code is reported. Note: it's possible to use #SSENDEXT only if the connection was opened by #SD, else the ME is raising an error. Note: all special characters are sent like a generic byte. (For instance: 0x08 is simply sent through the socket and don't behave like a BS, i.e. previous character is not deleted)</bytestosend></space></greater_than>	
AT#SSENDEXT=?	Test command returns the range of supported values for parameters < connld > and <bytestosend></bytestosend>	
Example	Open the socket in command mode: at#sd=1,0, <port>,"IP address",0,0,1 OK Give the command specifying total number of bytes as second parameter: at#ssendext=1,256 >; // Terminal echo of bytes sent is displayed here</port>	
OK All possible bytes(from 0x00 to 0xFF) are sent on the socket as ge bytes.		

3.5.7.4.16. IP Easy Authentication Type - #SGACTAUTH

<mark>#SGACTAUTH - Eas</mark> y	GRPS Authentication Type	SELINT 2
AT#SGACTAUTH= <type></type>	Set command sets the authentication type for IP Easy This command has effect on the authentication mode used on a or AT#GPRS commands.	AT#SGACT
	Parameter < type> 0 - no authentication	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 430 of 604

80000ST10025a Rev. 10 - 2011-02-17

<mark>#SGACTAUTH – Eas</mark> y	GRPS Authentication Type	SELINT 2	
	1 - PAP authentication (factory default)		
	2 - CHAP authentication		
	Note: the parameter is not saved in NWM		
AT#SGACTAUTH?	Read command reports the current IP Easy authentication type, in the format:		
	#SGACTAUTH: <type></type>		
AT#SGACTAUTH =?	Test command returns the range of supported values for para	meter	
	<type>.</type>		

3.5.7.4.17. Context activation and configuration - #SGACTCFG

#SGACTCFG - Context Activation and Configuration SELI		SELINT 2
AT#SGACTCFG= <cid>, <retry>, [,<delay> [,<urcmode>]]</urcmode></delay></retry></cid>	Execution command is used to enable or disable the automatic activation/reactivation of the context for the specified PDP context, to set the maximum number of attempts and to set the delay between an attempt and the next one. The context is activated automatically after every GPRS Attach or after a NW PDP CONTEXT deactivation if at least one IPEasy socket is configured to this context (see AT#SCFG).	
	 <cid> - PDP context identifier (see +CGDCONT command)</cid> 15 - numeric parameter which specifies a particular PDF definition 	^o context
	<retry></retry> - numeric parameter which specifies the maximum context activation attempts in case of activation failure. The belongs to the following range: 0 - 15	
	0 - disable the automatic activation/reactivation of the cont	ext (default)
	<delay> - numeric parameter which specifies the delay in s between an attempt and the next one. The value belongs to following range: 180 - 3600</delay>	
	<ur>< urcmode > - URC presentation mode</ur>	

page 431 of 604

	 0 - disable unsolicited result code (default) 1 - enable unsolicited result code, after an automatic activation/reactivation, of the local IP address obtained from the network. It has meaning only if <auto>=1. The unsolicited message is in the format:</auto> #SGACT: <ip_address></ip_address> reporting the local IP address obtained from the network. Note: the URC presentation mode <urcmode> is related to the current AT instance only. Last <urcmode> setting is saved for every instance as extended profile parameter, thus it is possible to restore it even if the multiplexer control channel is released and set up, back and forth.</urcmode></urcmode> 	
	Note: < retry > and < delay > setting are global parameter saved in NVM Note: if the automatic activation is enabled on a context, then it is not allowed to modify by the command AT#SCFG the association between the context itself and the socket connection identifier; all the other parameters of command AT#SCFG are modifiable while the socket is not connected	
AT#SGACTCFG?	Read command reports the state of all the five contexts, in the format: #SGACTCFG: <cid1>,<retry1>,<delay1>, < urcmode >CR><lf> #SGACTCFG: <cid5>,<retry5>,<delay5>,< urcmode > where: <cid<i>n> - as <cid> before <retry<i>n> - as <retry> before <delay<i>n> - as <delay> before < urcmode > - as < urcmode > before</delay></delay<i></retry></retry<i></cid></cid<i></delay5></retry5></cid5></lf></delay1></retry1></cid1>	
AT#SGACTCFG =?	Test command reports supported range of values for parameters <cid> >,<retry>,<delay>and < urcmode ></delay></retry></cid>	

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

3.5.7.4.18. Context activation and configuration extended - #SGACTCFGEXT

activation configuration extended SELINT 2
Execution command is used to enable new features related to
context activation.
Parameters:
<cid> - PDP context identifier (see +CGDCONT command) 15 - numeric parameter which specifies a particular PDP context definition</cid>
< abortAttemptEnable > 0 – old behaviour: no abort possible while attempting context activation
1 – abort during context activation attempt is possible by sending a byte
on the serial port. It takes effect on successive GPRS context activation attempt through #SGACT command in the following manner.
While waiting for AT#SGACT= <cid>,1 response(up to 150 s) is possible to abort attempt by sending a byte and get back AT interface control(NO CARRIER indication).</cid>
Note: If we receive delayed CTXT ACTIVATION ACCEPT after abort, network
will be automatically informed of our aborted attempt through relative protocol messages(SM STATUS) and will also close on
its side.
Otherwise, if no ACCEPT is received after abort, network will be
informed later of our PDP state through other protocol messages (routing area update for instance).
Read command reports the state of all the five contexts, in the format:
#SGACTCFGEXT: <cid1>,< abortAttemptEnable1 >,0,0,0<cr><lf></lf></cr></cid1>
#SGACTCFGEXT: <cid5>,< abortAttemptEnable5 >,0,0,0<cr><lf></lf></cr></cid5>
where:
<cid<i>n> - as <cid> before < abortAttemptEnable <i>n</i>> - as < abortAttemptEnable > before</cid></cid<i>
Note: values are automatically saved in NVM.

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

AT#SGACTCFGEXT=? Test command reports supported range of values for all parameters

3.5.7.4.19. PAD command features - #PADCMD

#PADCMD - PAD command	features SELINT 2
AT#PADCMD= <mode></mode>	This command sets features of the pending data flush to socket, opened with AT#SD command.
	Parameters: <mode>: Bit 1: 1 - enable forwarding; 0 – disable forwarding; Other bits reserved;</mode>
	Note: forwarding depends on character defined by AT#PADFWD
AT#PADCMD?	Read command reports the currently selected <mode></mode> in the format: #PADCMD: mode
AT#PADCMD=?	Test command reports the supported range of values for parameter <mode></mode> .

3.5.7.4.20. PAD forward character - #PADFWD

#PADFWD - PAD forward	character SELINT 2
AT#PADFWD= <char>This command sets the char that immediately flushes pend to socket, opened with AT#SD command.</char>	
	Parameters:
	<pre><char>: a number, from 0 to 255, that specifies the asci code of the char used to flush data <mode>: flush mode, 0 - normal mode (default); 1 - reserved;</mode></char></pre>
	Note: use AT#PADCMD to enable the socket char-flush activity.
AT#PADFWD?	Read command reports the currently selected <char></char> and <mode></mode> in the format: #PADFWD: <char>,mode</char>
AT#PADFWD=?	Test command reports the supported range of values for

parameters **<char>** and **<mode>**.

3.5.7.4.21. Base64 encoding/decoding of data sent/received on a socket - #BASE64

#BASE64 - Base64 encoding/decodi	ng of data sent/received on a skt SELINT 2
AT#BASE64=	Set command enables base64 encoding and/or decoding of data
<connld>,<enc>,<dec></dec></enc></connld>	sent/received to/from the socket in online or in command mode.
[, <unused_b></unused_b>	
[, <unused_c>]]</unused_c>	Parameters:
	<connld> - socket connection identifier 16</connld>
	<enc></enc>
	0 – no encoding of data received from serial port.
	1 - MIME RFC2045 base64 encoding of data received from serial port that have to be sent to <connid> socket.</connid>
	Note: as indicated from RFC2045 the encoded output stream is represented in lines of no more than 76 characters each.
	Lines are defined as sequences of octets separated by a CRLF sequence.
	2 - RFC 3548 base64 encoding of data received from serial port that have to be sent to <connld> socket.</connld>
	Note: as indicated from RFC3548 CRLF have not to be added.
	<dec></dec>
	0 – no decoding of data received from socket <connld>. 1 - MIME RFC2045 base64 decoding of data received from socket</connld>
	<connid> and sent to serial port.</connid>
	(Same rule as for <enc> regarding line feeds in the received file that has to be decoded)</enc>
	2 - RFC3548 base64 decoding of data received from socket
	<connid> and sent to serial port.</connid>
	(Same rule as for <enc> regarding line feeds in the</enc>
	received file that has to be decoded)
	Note: it is possible to use command to change current
	<enc>/<dec> settings for a socket already opened in command</dec></enc>
	mode or in online mode after suspending it.

page 435 of 604

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

	(In this last case obviously it is necessary to set AT#SKIPESC=1).
	Note: to use #BASE64 in command mode, if data to send exceed maximum value for #SSENDEXT command, they have to be divided in multiple parts. These parts have to be a multiple of 57 bytes, except for the last one, to distinguish EOF condition. (Base64 encoding rules) For the same reason if #SRECV command is used by the
	application to receive data, a multiple of 78 bytes has to be considered.
	Note: to use #SRECV to receive data with <dec> enabled, it is necessary to consider that: reading <maxbyte> bytes from socket, user will get less due to decoding that is performed.</maxbyte></dec>
	Note: on version 10.0x.xx3 only <connid> 1 is available.</connid>
	Note: values are automatically saved in NVM.
AT# BASE64?	Read command returns the current <enc>/<dec> settings for all the six sockets, in the format:</dec></enc>
	# BASE64: <connld1><enc1>,<dec1>,0,0<cr><lf></lf></cr></dec1></enc1></connld1>
	# BASE64: <connid6>,<enc6>,<dec6>,0,0<cr><lf></lf></cr></dec6></enc6></connid6>
AT# BASE64=?	Test command returns the range of supported values for all the subparameters.
Example	AT#SKIPESC=1 OK
Example	OK AT#SD= <connid>,<txprot>,<rport>,<ipaddr></ipaddr></rport></txprot></connid>
Example	OK
Example	OK AT#SD= <connid>,<txprot>,<rport>,<ipaddr> CONNECT</ipaddr></rport></txprot></connid>

3.5.7.5. FTP AT Commands

3.5.7.5.1. FTP Time-Out - #FTPTO

#FTPT0 - FTP Time-	Out	SELINT 0 / 1
AT#FTPT0[=	Set command sets the time-out used when opening either	the FTP control
<tout>]</tout>	channel or the FTP traffic channel.	
	Parameter:	
	<tout> - time-out in 100 ms units</tout>	
	1005000 - hundreds of ms (factory default is 100)	
	Note: The parameter is not saved in NVM.	
	Note: if parameter <tout></tout> is omitted the behaviour of Sessame as Read command.	t command is the
AT#FTPT0?	Read command returns the current FTP operations time-o	ut, in the format:
	#FTPTO: <tout></tout>	
AT#FTPT0=?	Test command returns the range of supported values for p	arameter <tout></tout>

#FTPT0 - FTP Time-	Out	SELINT 2
AT#FTPT0=	Set command sets the time-out used when opening either	the FTP control

80000ST10025a Rev. 10 - 2011-02-17

#FTPTO - FTP Tir	ne-Out	SELINT 2
[<tout>]</tout>	channel or the FTP traffic channel.	
	Parameter:	
	<tout> - time-out in 100 ms units</tout>	
	1005000 - hundreds of ms (factory default is 100)	
	Note: The parameter is not saved in NVM.	
AT#FTPT0?	Read command returns the current FTP operations tir	ne-out, in the format:
	#FTPTO: <tout></tout>	
AT#FTPT0=?	Test command returns the range of supported values	for parameter <tout></tout>

3.5.7.5.2. FTP Open - #FTPOPEN

#FTPOPEN - FTP Op	en	SELINT 0 / 1
AT#FTPOPEN=	Execution command opens an FTP connection toward the F	TP server.
<server:port>,</server:port>		
<username>,</username>	Parameters:	
<password>[, <mode>]</mode></password>	server:port> - string type, address and port of FTP server port 21).	factory default
	<pre><username> - string type, authentication user identificatio <password> - string type, authentication password for FTP <mode></mode></password></username></pre>	J. J
	0 - active mode (default)	
	1 - passive mode	
	Note: Before opening an FTP connection the GPRS context activated by AT#GPRS=1	must have been

#FTPOPEN - FTP Op	en SELINT 2	
AT#FTPOPEN=	Execution command opens an FTP connection toward the FTP server.	
[<server:port>,</server:port>		
<username>,</username>	Parameters:	
<password>[,</password>	<server:port> - string type, address and port of FTP server (factory default)</server:port>	
<mode>]]</mode>	port 21).	

80000ST10025a Rev. 10 - 2011-02-17

#FTPOPEN - FTP Oper	n SELINT 2
	<username> - string type, authentication user identification string for FTP. <password> - string type, authentication password for FTP. <mode> 0 - active mode (factory default) 1 - passive mode</mode></password></username>
	Note: Before opening an FTP connection either the GSM context must have been activated by AT#SGACT=0,1 or the PDP context #1 must have been activated by AT#SGACT=1,1 or by AT#GPRS=1
AT#FTPOPEN=?	Test command returns the OK result code.

3.5.7.5.3. FTP Close - #FTPCLOSE

#FTPCLOSE - FTP Cl	ose	<mark>SELINT 0 / 1</mark>
AT#FTPCLOSE	Execution command closes an FTP connection.	
AT#FTPCLOSE?	Read command behavior is the same as Execution comman	nd.

#FTPCLOSE - FTP Cl	ose	SELINT 2
AT#FTPCLOSE	Execution command closes an FTP connection.	
AT#FTPCLOSE=?	Test command returns the OK result code.	

3.5.7.5.4. FTP Put - #FTPPUT

#FTPPUT - FTP Put	SELINT 0 / 1	
AT#FTPPUT=	Execution command, issued during an FTP connection, opens a data connection	
<filename></filename>	and starts sending <filename></filename> file to the FTP server.	
	If the data connection succeeds, a CONNECT indication is sent,	
	afterward a NO CARRIER indication is sent when the socket is closed.	
	Parameter:	
	<filename> - string type, name of the file (maximum length 200 characters)</filename>	
	Note: use the escape sequence +++ to close the data connection.	
	Note: The command causes an ERROR result code to be returned if no FTP	
	connection has been opened yet.	
AT#FTPPUT=?	Test command returns the OK result code.	

80000ST10025a Rev. 10 – 2011-02-17

#FTPPUT - FTP Put	SELINT 2	
AT#FTPPUT= [<filename>]</filename>	Execution command, issued during an FTP connection, opens a data connection and starts sending <filename></filename> file to the FTP server.	
	If the data connection succeeds, a CONNECT indication is sent. afterward a NO CARRIER indication is sent when the socket is closed.	
	Parameter: <filename> - string type, name of the file (maximum length 200 characters) Note: use the escape sequence +++ to close the data connection.</filename>	
AT#FTPPUT=?	Note: The command causes an ERROR result code to be returned if no FTP connection has been opened yet. Test command returns the OK result code.	

3.5.7.5.5. FTP Get - #FTPGET

#FTPGET - FTP Get		SELINT 0 / 1
AT#FTPGET= <filename></filename>	Execution command, issued during an FTP connection connection and starts getting a file from the FTP server. If the data connection succeeds a CONNECT indication is NO CARRIER indication is sent. The file is received on the serial port.	
	Parameter: <filename></filename> - file name, string type. Note: The command causes an ERROR result code to be no FTP connection has been opened yet. Note: Command closure should always be handled by appl	ication. In order
	to avoid download stall situations a timeout should be impl application.	emented by the

#FTPGET - FTP Get	S	ELINT 2
AT#FTPGET=	Execution command, issued during an FTP connection, open	s a data
[<filename>]</filename>	connection and starts getting a file from the FTP server.	
	If the data connection succeeds a CONNECT indication is ser	nt.
	The file is received on the serial port.	

80000ST10025a Rev. 10 - 2011-02-17

#FTPGET - FTP Get	SELINT 2
	Parameter: <filename> - file name, string type. Note: The command causes an ERROR result code to be returned in case no FTP connection has been opened yet.</filename>
	Note: Command closure should always be handled by application. In order to avoid download stall situations a timeout should be implemented by the application.
AT#FTPGET=?	Test command returns the OK result code.

3.5.7.5.6. FTP GET in command mode - #FTPGETPKT

#FTPGETPKT - FTP Get	in command mode SELINT 2	
AT#FTPGETPKT= <filename> [,<viewmode>]</viewmode></filename>	Execution command, issued during an FTP connection, opens a data connection and starts getting a file from the FTP server while remaining in command mode .	
	The data port is opened and we remain in command mode and we see the result code OK . Retrieval from FTP server of "remotefile" is started, but data are only buffered in the module. It's possible to read data afterwards issuing #FTPRECV command	
	Parameters: < filename> - file name, string type. < viewMode> - permit to choose view mode (text format or Hexadecimal)	
	Note: The command causes an ERROR result code to be returned in case no FTP connection has been opened yet.	
	Note: Command closure should always be handled by application. In order to avoid download stall situations a timeout should be implemented by the application.	
AT#FTPGETPKT?	Read command reports current download state for <filename> with <viewmode> chosen, in the format:</viewmode></filename>	

80000ST10025a Rev. 10 - 2011-02-17

#FTPGETPKT - FTP Get	t in command mode	SELINT 2
	#FTPGETPKT: <remotefile>,<viewmode>,<eof></eof></viewmode></remotefile>	
	<eof> 0 = file currently being transferred</eof>	
	1 = complete file has been transferred to FTP clier	nt
AT#FTPGETPKT=?	Test command returns the OK result code.	

3.5.7.5.7. FTP Type - #FTPTYPE

#FTPTYPE - FTP Typ	e SELINT 0 / 1
AT#FTPTYPE[=	Set command, issued during an FTP connection, sets the file transfer type.
<type>]</type>	
	Parameter:
	<type> - file transfer type:</type>
	0 - binary
	1 - ascii
	Note: The command causes an ERROR result code to be returned if no FTI connection has been opened yet.
	Note: If the parameter is omitted then the behaviour of Set command is the same of Read command.
#FTPTYPE?	Read command returns the current file transfer type, in the format:
	#FTPTYPE: <type></type>
#FTPTYPE=?	Test command returns the range of available values for parameter <type></type> :
	#FTPTYPE: (0,1)

#FTPTYPE - FTP Typ	e SELIN	IT 2
AT#FTPTYPE=	Set command, issued during an FTP connection, sets the file trans	sfer type.
[<type>]</type>		
	Parameter:	
	<type> - file transfer type:</type>	
	0 - binary	
	1 - ascii	
	Note: The command causes an ERROR result code to be returned connection has been opened yet.	if no FTP
#FTPTYPE?	Read command returns the current file transfer type, in the forma	at:
	#FTPTYPE: <type></type>	

80000ST10025a Rev. 10 - 2011-02-17

#FTPTYPE - FTP Type	e	SELINT 2
#FTPTYPE=?	Test command returns the range of available values for parameter <type></type> :	
	#FTPTYPE: (0,1)	

3.5.7.5.8. FTP Read Message - #FTPMSG

#FTPMSG - FTP Read Message SELINT 0 / 1		
AT#FTPMSG	Execution command returns the last response from the se	rver.
AT#FTPMSG?	Read command behaviour is the same as Execution command.	
	·	

#FTPMSG - FTP Read Message SELINT 2		SELINT 2
AT#FTPMSG	Execution command returns the last response from the se	rver.
AT#FTPMSG=? Test command returns the OK result code.		

3.5.7.5.9. FTP Delete - #FTPDELE

#FTPDELE - FTP Del	lete SELINT 0 / 1
AT#FTPDELE=	Execution command, issued during an FTP connection, deletes a file from
<filename></filename>	the remote working directory.
	 Parameter: <filename> - string type, it's the name of the file to delete.</filename> Note: The command causes an ERROR result code to be returned if no FTP connection has been opened yet. Note: In case of delayed server response, it is necessary to check if ERROR indication is temporary due to timing out while waiting. In this case #FTPMSG response will result temporary empty. (Checking later #FTPMSG response will match with delayed server response)

#FTPDELE - FTP Del	ete	SELINT 2
	Execution command, issued during an FTP connect the remote working directory.	tion, deletes a file from

page 443 of 604

80000ST10025a Rev. 10 - 2011-02-17

#FTPDELE - FTP Del	ete	SELINT 2
	Parameter: <filename> - string type, it's the name of the file to delete. Note: The command causes an ERROR result code to be re connection has been opened yet.</filename>	
	Note: In case of delayed server response, it is necessary to indication is temporary due to timing out while waiting. In this case #FTPMSG response will result temporary emp (Checking later #FTPMSG response will match with delaye response)	ity.
AT#FTPDELE=?	Test command returns the OK result code.	

3.5.7.5.10. FTP Print Working Directory - #FTPPWD

#FTPPWD - FTP Print Working Directory		SELINT 0 / 1
AT#FTPPWD	Execution command, issued during an FTP connection, s working directory on FTP server.	shows the current
	Note: The command causes an ERROR result code to be connection has been opened yet.	returned if no FTP

#FTPPWD - FTP Print Working Directory SELINT 2		SELINT 2
AT#FTPPWD	Execution command, issued during an FTP connection, sho working directory on FTP server. Note: The command causes an ERROR result code to be re connection has been opened yet.	
AT#FTPPWD=?	Test command returns the OK result code.	

3.5.7.5.11. FTP Change Working Directory - #FTPCWD

#FTPCWD - FTP Change Working Directory SELI		SELINT 0 / 1
AT#FTPCWD=	Execution command, issued during an FTP connection, cha	nges the working
<dirname></dirname>	directory on FTP server.	
	Parameter:	
	<dirname> - string type, it's the name of the new working directory.</dirname>	

80000ST10025a Rev. 10 - 2011-02-17

#FTPCWD - FTP Cha	nge Working Directory	SELINT 0 / 1
	Note: The command causes an ERROR res connection has been opened yet.	sult code to be returned if no FTP

#FTPCWD - FTP Cha	#FTPCWD - FTP Change Working Directory SELINT 2	
AT#FTPCWD= [<dirname>]</dirname>	Execution command, issued during an FTP connection, cha directory on FTP server.	nges the working
	Parameter:	
	<pre><dirname> - string type, it's the name of the new working of the</dirname></pre>	
	Note: The command causes an ERROR result code to be re connection has been opened yet.	eturned if no FTP
AT#FTPCWD=?	Test command returns the OK result code.	

3.5.7.5.12. FTP List - #FTPLIST

#FTPLIST - FTP List	SELINT 0 / 1
AT#FTPLIST[= <name>]</name>	Execution command, issued during an FTP connection, opens a data connection and starts getting from the server the list of contents of the specified directory or the properties of the specified file.
	Parameter: <name> - string type, it's the name of the directory or file.</name>
	Note: The command causes an ERROR result code to be returned if no FTP connection has been opened yet.
	Note: issuing AT#FTPLIST<cr></cr> opens a data connection and starts getting from the server the list of contents of the working directory.

#FTPLIST - FTP List	SELINT 2	
AT#FTPLIST[= [<name>]]</name>	Execution command, issued during an FTP connection, opens a data connection and starts getting from the server the list of contents of the specified directory or the properties of the specified file. Parameter: <name> - string type, it's the name of the directory or file.</name>	
	Note: The command causes an ERROR result code to be re connection has been opened yet.	eturned if no FTP

80000ST10025a Rev. 10 - 2011-02-17

#FTPLIST - FTP List		SELINT 2
	Note: issuing AT#FTPLIST<cr></cr> opens a data connection an from the server the list of contents of the working directory	
AT#FTPLIST=?	Test command returns the OK result code.	

3.5.7.5.13. Get file size - **#FTPFSIZE**

#FTPFSIZE – Get file	e size from FTP server	SELINT 2
AT#FTPFSIZE= <filename></filename>	Execution command, issued during an FTP connection, permits to get file size of <filename> file.</filename>	
	Note: FTPTYPE=0 command has to be issued before FTPFSIZE co file transfer type to binary mode.	ommand, to set
AT# FTPFSIZE=?	Test command returns the OK result code.	

3.5.7.5.14. FTP Append - #FTPAPP

#FTPAPP - FTP Ap	ppend SELINT 2
AT#FTPAPP= [<filename>]</filename>	Execution command, issued during an FTP connection, opens a data connection and append data to existing <filename> file. If the data connection succeeds, a CONNECT indication is sent, afterward a NO CARRIER indication is sent when the socket is closed.</filename>
	Parameter: <filename> - string type, name of the file. Note: use the escape sequence +++ to close the data connection.</filename>
	Note: The command causes an ERROR result code to be returned if no FTP connection has been opened yet.
AT#FTPAPP=?	Test command returns the OK result code.

3.5.7.5.15. Set restart position - # FTPREST

80000ST10025a Rev. 10 - 2011-02-17

#FTPREST – Set res	tart position for FTP GET SELINT 2
AT#FTPREST= <restartposition></restartposition>	Set command sets the restart position for successive FTPGET (or FTPGETPKT) command. It permits to restart a previously interrupted FTP download from the selected position in byte.
	Parameter: <restartposition> position in byte of restarting for successive FTPGET (or FTPGETPKT)</restartposition>
	Note: It's necessary to issue FTPTYPE=0 before successive FTPGET (or FTPGETPKT command) to set binary file transfer type.
	Note: Setting <restartposition> has effect on successive FTP download. After successive successfully initiated FTPGET(or FTPGETPKT) command <restartposition> is automatically reset.</restartposition></restartposition>
	Note: value set for <restartposition> has effect on next data transfer(data port opened by FTPGET or FTPGETPKT).</restartposition>
	Then <restartposition> value is automatically assigned to 0 for next download.</restartposition>
AT# FTPREST?	Read command returns the current <restartposition></restartposition>
	#FTPREST: <restartposition></restartposition>
AT# FTPREST=?	Test command returns the OK result code.

3.5.7.5.16. Receive Data In Command Mode - #FTPRECV

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

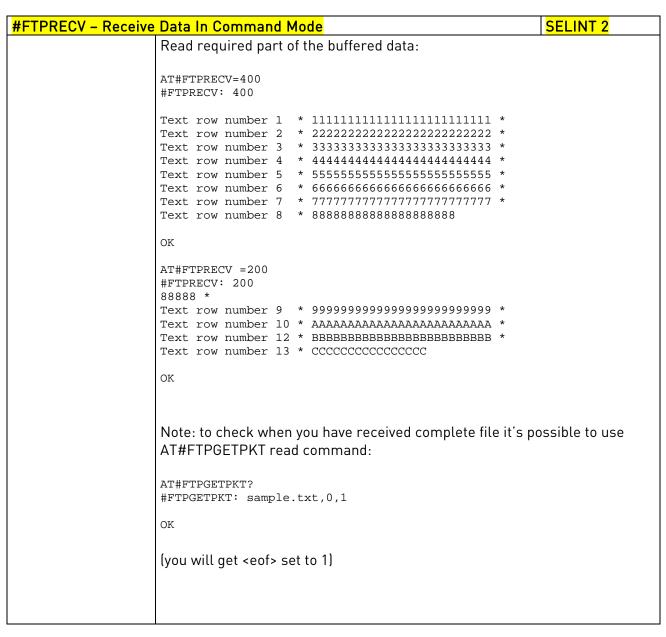

80000ST10025a Rev. 10 - 2011-02-17

#FTPRECV – Receive	Data In Command Mode SELINT 2
AT#FTPRECV= <blocksize></blocksize>	Execution command permits the user to transfer at most <blocksize> bytes of remote file, provided that retrieving from the FTP server has been started with a previous #FTPGETPKT command, onto the serial port.</blocksize>
	This number is limited to the current number of bytes of the remote file which have been transferred from the FTP server.
	Parameters: < blocksize > - max number of bytes to read 13000
	Note: it's necessary to have previously opened FTP data port and started download and buffering of remote file through #FTPGETPKT command
	Note: issuing #FTPRECV when there's no FTP data port opened raises an error.
	Note: data port will stay opened if socket is temporary waiting to receive data(FTPRECV returns 0 and FTPGETPKT gives a EOF 0 indication).
AT# FTPRECV?	Read command reports the number of bytes currently received from FTP server, in the format:
	#FTPRECV: <available></available>
AT# FTPRECV=?	Test command returns the range of supported values for
Example	AT#FTPRECV? #FTPRECV: 3000
	ОК

3.5.7.6. Enhanced IP Easy Extension AT Commands

3.5.7.6.1. Authentication User ID - #USERID

#USERID - Authentication User ID

SELINT 0 / 1

page 449 of 604

80000ST10025a Rev. 10 - 2011-02-17

#USERID - Authentic	ation User ID SELINT 0 / 1
AT#USERID	Set command sets the user identification string to be used during the
[= <user>]</user>	authentication step.
	Parameter:
	<user> - string type, it's the authentication User Id; the max length for this value is the output of Test command, AT#USERID=? (factory default is the empty string "").</user>
	Note: If parameter is omitted then the behaviour of Set command is the same of Read command.
AT#USERID?	Read command reports the current user identification string, in the format:
	#USERID: <user>.</user>
AT#USERID=?	Test command returns the maximum allowed length of the string parameter <user></user> .
Example	AT#USERID="myName" OK AT#USERID? #USERID: "myName" OK

#USERID - Authenti	ication User ID SELINT 2
AT#USERID= [<user>]</user>	Set command sets the user identification string to be used during the authentication step.
	 Parameter: <user> - string type, it's the authentication User Id; the max length for this value is the output of Test command, AT#USERID=? (factory default is the empty string "").</user> Note: this command is not allowed for sockets associated to a GSM context (see #SCFG).
AT#USERID?	Read command reports the current user identification string, in the format: #USERID: <user></user>
AT#USERID=?	Test command returns the maximum allowed length of the string parameter <user></user> .
Example	AT#USERID="myName" OK AT#USERID? #USERID: "myName" OK

3.5.7.6.2. Authentication Password - **#PASSW**

#PASSW - Authentica	ation Password	SELINT 0/1
AT#PASSW= <pwd></pwd>	Set command sets the user password string to be authentication step.	used during the
	Parameter: <pwd> - string type, it's the authentication password; the this value is the output of Test command, AT#P default is the empty string "").</pwd>	U U
AT#PASSW=?	Test command returns the maximum allowed length parameter <pwd></pwd> .	h of the string
Example	AT#PASSW="myPassword" OK	

#PASSW - Authenti	cation Password SE	LINT 2
AT#PASSW= [<pwd>]</pwd>	Set command sets the user password string to be used during authentication step.	the
	Parameter: <pwd> - string type, it's the authentication password; the max this value is the output of Test command, AT#PASSW default is the empty string "").</pwd>	-
	Note: this command is not allowed for sockets associated to a (see #SCFG).	GSM context
AT#PASSW=?	Test command returns the maximum allowed length of the str parameter <pwd></pwd> .	ring
Example	AT#PASSW="myPassword" OK	

3.5.7.6.3. Packet Size - #PKTSZ

#PKTSZ - Packet Size	e	SELINT 0 / 1
AT#PKTSZ[= [<size>]]</size>	Set command sets the default packet size to be used by stack for data sending.	the TCP/UDP/IP
	Parameter: < size> - packet size in bytes 0 - automatically chosen by the device 1512 - packet size in bytes (factory default is 300)	
	Note: issuing AT#PKTSZ<cr></cr> is the same as issuing the R	ead command.

80000ST10025a Rev. 10 - 2011-02-17

#PKTSZ - Packet Size	e SELINT 0 / 1
	Note: issuing AT#PKTSZ= <cr> is the same as issuing the command AT#PKTSZ=0<cr>.</cr></cr>
AT#PKTSZ?	Read command reports the current packet size value.
	Note: after issuing command AT#PKTSZ=0 , the Read command reports the value automatically chosen by the device.
AT#PKTSZ=?	Test command returns the allowed values for the parameter <size></size> .
Example	AT#PKTSZ=100 OK AT#PKTSZ? #PKTSZ: 100
	OK AT#PKTSZ=0 OK AT#PKTSZ? #PKTSZ: 300 ->value automatically chosen by device
	OK

#PKTSZ - Packet S	Size SELINT 2
AT#PKTSZ= [<size>]</size>	Set command sets the default packet size to be used by the TCP/UDP/IP stack for data sending.
	Parameter:
	<size> - packet size in bytes</size>
	0 - automatically chosen by the device
	11500 - packet size in bytes (factory default is 300)
	Note: this command is not allowed for sockets associated to a GSM context [see #SCFG].
AT#PKTSZ?	Read command reports the current packet size value.
	Note: after issuing command AT#PKTSZ=0 , the Read command reports the value automatically chosen by the device.
AT#PKTSZ=?	Test command returns the allowed values for the parameter <size></size> .
Example	AT#PKTSZ=100 OK AT#PKTSZ? #PKTSZ: 100
	OK AT#PKTSZ=0 OK
	AT#PKTSZ? #PKTSZ: 300 -> <i>value automatically chosen by device</i>
	OK

#SKTTO - Socket Ina	activity Time-Out SELINT 2
AT#SKTTO= [<tout>]</tout>	Set command sets the maximum time with no data exchanging on the socket that the module awaits before closing the socket and deactivating the GPRS context. Parameter: <tout> - socket inactivity time-out in seconds units 0 - no time-out. 165535 - time-out in sec. units (factory default is 90). Note: this time-out applies when no data is exchanged in the socket for a long time and therefore the socket connection has to be automatically closed; the GPRS context is deactivated only if it has been activated issuing #SKTOP; if it has been activated issuing #SKTD, now it stays activated. Note: this command is not allowed for sockets associated to a GSM context</tout>
AT#SKTTO?	(see #SCFG).
AT#SKTT0? AT#SKTT0=?	Read command reports the current socket inactivity time-out value.
	Test command returns the allowed values for parameter <tout></tout> .
Example	AT#SKTTO=30 ->(30 sec. time-out) OK AT#SKTTO? #SKTTO: 30 OK

3.5.7.6.6. Socket Definition - #SKTSET

#SKTSET - Socket D	efinition	SELINT 0 / 1
AT#SKTSET[=	Set command sets the socket parameters values.	
<socket type="">,</socket>		
<remote port="">,</remote>	Parameters:	
<remote addr="">,</remote>	<socket type=""> - socket protocol type</socket>	
[<closure type="">],</closure>	0 - TCP (factory default)	
[<local port="">]]</local>	1 - UDP	
	<remote port=""> - remote host port to be opened</remote>	
	065535 - port number (factory default is 3333)	
	<pre><remote addr=""> - address of the remote host, string type</remote></pre>	e. This parameter
	can be either:	
	- any valid IP address in the format: xxx.xxx.xxx	
	 any host name to be solved with a DNS query in the 	the format: <host< b=""></host<>
	name>	
	(factory default is the empty string "")	

80000ST10025a Rev. 10 - 2011-02-17

#SKTSET - Socket D	efinition	SELINT 0 / 1
	<closure type=""> - socket closure behaviour for TCP</closure>	
	0 - local host closes immediately when remote host has a	closed (default)
	255 - local host closes after an escape sequence (+++) o	
	disconnect from remote.	
	local port> - local host port to be used on UDP socket	
	065535 - port number	
	Note: <closure type=""> parameter is valid only for TCP so</closure>	cket type, for UDP
	sockets shall be left unused.	
	Note: <local port=""> parameter is valid only for UDP soc</local>	ket type, for TCP
	sockets shall be left unused.	
	Note: The resolution of the host name is done when op	pening the socket.
	therefore if an invalid host name is given to the #SKTSE	0
	error message will be issued.	
	Note: the DNS Query to be successful requests that:	
	- the GPRS context 1 is correctly set with +CGDCONT	
	- the authentication parameters are set (#USERID, #P	ASSW
	- the GPRS coverage is enough to permit a connection.	
	Note: If all parameters are omitted then the behaviour o	f Set command is
	the same as Read command.	
AT#SKTSET?	Read command reports the socket parameters values, in t	he format:
	AT#SKTSET: <socket type="">,<remote port="">,<remote add<="" td=""><td>r>.</td></remote></remote></socket>	r>.
	<pre><closure type="">,<local port=""></local></closure></pre>	,
AT#SKTSET=?	Test command returns the allowed values for the paramet	ters.
Example	AT#SKTSET=0,1024,"123.255.020.001"	
	AT#SKTSET=0,1024,"www.telit.net" OK	
Note	Issuing command #QDNS will overwrite < remote addr> s	etting.

#SKTSET - Socket D	efinition	SELINT 2
AT#SKTSET=	Set command sets the socket parameters values.	
[<socket type="">,</socket>		
<remote port="">,</remote>	Parameters:	
<remote addr="">,</remote>	<socket type=""> - socket protocol type</socket>	
[<closure type="">],</closure>	0 - TCP (factory default)	
[<local port="">]]</local>	1 - UDP	
	<remote port=""> - remote host port to be opened</remote>

80000ST10025a Rev. 10 - 2011-02-17

#SKTSET - Socket D	efinition SELINT 2	
	065535 - port number (factory default is 3333)	
	<pre><remote addr=""> - address of the remote host, string type. This parameter</remote></pre>	
	can be either:	
	- any valid IP address in the format: xxx.xxx.xxx	
	- any host name to be solved with a DNS query in the format: <host< b=""></host<>	
	name>	
	(factory default is the empty string "")	
	<closure type=""> - socket closure behaviour for TCP 0 - local host closes immediately when remote host has closed (default)</closure>	
	255 - local host closes after an escape sequence (+++) or after an abortiv disconnect from remote.	'e
	local port> - local host port to be used on UDP socket	
	065535 - port number	
	Note: <closure type=""></closure> parameter is valid only for TCP socket type, for UDP)
	sockets shall be left unused.	
	Note: <local port=""> parameter is valid only for UDP socket type, for TCP</local>	
	sockets shall be left unused.	
	Note: The resolution of the host name is done when opening the socket,	
	therefore if an invalid host name is given to the #SKTSET command, then an error message will be issued.	
	Note: the DNS Query to be successful requests that:	
	 the GPRS context 1 is correctly set with +CGDCONT 	
	- the authentication parameters are set (#USERID, #PASSW)	
	- the GPRS coverage is enough to permit a connection.	
	Note: this command is not allowed for sockets associated to a GSM contex (see #SCFG).	‹t
AT#SKTSET?	Read command reports the socket parameters values, in the format: AT#SKTSET: <socket type="">,<remote port="">,<remote addr="">,</remote></remote></socket>	
	<closure type="">,<local port=""></local></closure>	
AT#SKTSET=?	Test command returns the allowed values for the parameters.	
Example	AT#SKTSET=0,1024,"123.255.020.001"	
	OK AT#SKTSET=0,1024,"www.telit.net" OK	
Note	Issuing command #QDNS will overwrite <remote addr=""></remote> setting.	

3.5.7.6.7. Socket Open - #SKTOP

80000ST10025a Rev. 10 - 2011-02-17

#SKTOP - Socket Op	en	SELINT 0 / 1
AT#SKTOP	Execution command activates the context number 1, pr authentication with the user ID and password previously and #PASSW commands, and opens a socket connecti specified in the #SKTSET command. Eventually, before op connection, it issues automatically a DNS query to solve the host name. If the connection succeeds a CONNECT indication is sent CARRIER indication is sent.	set by #USERID on with the host bening the socket the IP address of
AT#SKTOP?	Read command behaviour is the same as Execution comma	and.
Example	AT#SKTOP GPRS context activation, authentication and socket open CONNECT	

#SKTOP - Socket Op	en SELINT 2
AT#SKTOP	Execution command activates the context number 1, proceeds with the authentication with the user ID and password previously set by #USERID and #PASSW commands, and opens a socket connection with the host specified in the #SKTSET command. Eventually, before opening the socket connection, it issues automatically a DNS query to solve the IP address of the host name. If the connection succeeds a CONNECT indication is sent, otherwise a NO CARRIER indication is sent.
	(see #SCFG).
AT#SKTOP=?	Test command returns the OK result code.
Example	AT#SKTOP <i>GPRS context activation, authentication and socket open</i> CONNECT
Note	This command is obsolete. It's suggested to use the couple #SGACT and #SO instead of it.

3.5.7.6.8. Query DNS - #QDNS

#QDNS - Query DNS		SELINT 0 / 1
AT#QDNS=	Execution command executes a DNS query to solve the hos	st name into an IP
<host name=""></host>	<host name=""> address.</host>	
	Parameter: <host name=""></host> - host name, string type.	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 458 of 604

80000ST10025a Rev. 10 - 2011-02-17

#QDNS - Query DNS	SELINT 0 / 1	
	If the DNS query is successful then the IP address will be reported in th result code, as follows:	ıe
	#QDNS: <host name="">,<ip address=""></ip></host>	
	where <host name=""> - string type <ip address=""> - string type, in the format "xxx.xxx.xxx.xxx" Note: the command has to activate the GPRS context if it was not previous</ip></host>	sly
	activated. In this case the context is deactivated after the DNS query.	
Note	This command requires that the authentication parameters are correct set and that the GPRS network is present.	ly
Note	Issuing command #QDNS will overwrite <remote addr=""></remote> setting for command #SKTSET .	or

#QDNS - Query DNS		SELINT 2
AT#QDNS= [<host name="">]</host>	Execution command executes a DNS query to solve the host name into an I address.	
	Parameter: <host name=""></host> - host name, string type.	
	If the DNS query is successful then the IP address will be r result code, as follows:	eported in the
	#QDNS: <host name="">,<ip address=""></ip></host>	
	where <host name=""> - string type <ip address=""> - string type, in the format "xxx.xxx.xxx.xxx"</ip></host>	
	Note: the command has to activate the GPRS context if it w activated. In this case the context is deactivated after the D works with GSM context, but the GSM context has to be act	NS query. It also
AT#QDNS=?	Test command returns the OK result code.	
Note	This command requires that the authentication parameters set and that the GPRS network is present (or GSM, if GSM or	-

3.5.7.6.10. Manual DNS Selection - #DNS

<mark>#DNS – Manual DNS</mark>	Selection	SELINT 2
AT#DNS= <cid>,</cid>	Set command allows to manually set primary and seconda	ry DNS servers
<primary>,</primary>	either for a PDP context defined by +CGDCONT or for a GS	M context defined

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 460 of 604

80000ST10025a Rev. 10 - 2011-02-17

<mark>#DNS – Manual DNS</mark>	Selection SELINT 2
<secondary></secondary>	by #GSMCONT
	Parameters:
	<cid> - context identifier</cid>
	0 - specifies the GSM context
	15 - numeric parameter which specifies a particular PDP context definition
	<primary> - manual primary DNS server, string type, in the format "xxx.xxx.xxx" used for the specified cid; we're using this value instead of the primary DNS server come from the network (default is "0.0.0.0")</primary>
	<secondary> - manual secondary DNS server, string type, in the format "xxx.xxx.xxx" used for the specified cid; we're using this value instead of the secondary DNS server come from the network (default is "0.0.0.0").</secondary>
	Note: if <primary> is "0.0.0.0"</primary> and <secondary> is not "0.0.0.0"</secondary> , then issuing AT#DNS= raises an error.
	Note: if <primary> is "0.0.0.0"</primary> we're using the primary DNS server come from the network as consequence of a context activation.
	Note: if <primary> is not "0.0.0.0"</primary> and <secondary> is "0.0.0.0"</secondary> , then we're using only the manual primary DNS server.
	Note: the context identified by <cid></cid> has to be previously defined, elsewhere issuing AT#DNS= raises an error.
	Note: the context identified by <cid></cid> has to be not activated yet, elsewhere issuing AT#DNS= raises an error.
AT#DNS?	Read command returns the manual DNS servers set either for every defined PDP context and for the single GSM context (only if defined), in the format:
	[#DNS: <cid>,<primary>,<secondary>[<cr><lf> #DNS: <cid>,<primary>,<secondary>]]</secondary></primary></cid></lf></cr></secondary></primary></cid>
AT#DNS=?	Test command reports the supported range of values for the <cid></cid> parameter.only, in the format:
	#DNS: (0,5),,

#DNS – Manual DNS Selection		SELINT 2

3.5.7.6.11. Socket TCP Connection Time-Out - #SKTCT

#SKTCT - Socket TCI	Connection Time-Out SELINT 0 / 1
AT#SKTCT[=	Set command sets the TCP connection time-out for the first CONNECT
<tout>]</tout>	answer from the TCP peer to be received.
	Parameter:
	<tout> - TCP first CONNECT answer time-out in 100ms units</tout>
	101200 - hundreds of ms (factory default value is 600).
	Note: this time-out applies only to the time that the TCP stack waits for the CONNECT answer to its connection request.
	Note: The time for activate the GPRS and resolving the name with the DNS query (if the peer was specified by name and not by address) is not counted in this time-out.
	Note: if parameter is omitted then the behaviour of Set command is the
	same as Read command.
AT#SKTCT?	Read command reports the current TCP connection time-out.
AT#SKTCT=?	Test command returns the allowed values for parameter <tout>.</tout>
Example	AT#SKTCT=600 OK
	socket first connection answer time-out has been set to 60 s.

#SKTCT - Socket TCI	P Connection Time-Out	SELINT 2
AT#SKTCT=	Set command sets the TCP connection time-out for the firs	st CONNECT
[<tout>]</tout>	answer from the TCP peer to be received.	
	 Parameter: <tout> - TCP first CONNECT answer time-out in 100ms un 101200 - hundreds of ms (factory default value is 600).</tout> Note: this time-out applies only to the time that the TCP state CONNECT answer to its connection request. Note: The time for activate the GPRS and resolving the nam query (if the peer was specified by name and not by address in this time-out. 	ack waits for the ne with the DNS

80000ST10025a Rev. 10 – 2011-02-17

#SKTCT - Socket TCF	Connection Time-Out	SELINT 2
	Note: this command is not allowed for sockets associated t (see #SCFG).	to a GSM context
AT#SKTCT?	Read command reports the current TCP connection time-out.	
AT#SKTCT=?	Test command returns the allowed values for parameter <	tout>.
Example	AT#SKTCT=600 OK socket first connection answer time-out has been set to 60) <i>s.</i>

3.5.7.6.12. Socket Parameters Save - #SKTSAV

#SKTSAV - Socket Pa	arameters Save SELINT 0 / 1
AT#SKTSAV	Execution command stores the current socket parameters in the NVM of the device.
	The socket parameters to store are: - User ID
	- Password - Packet Size
	 Socket Inactivity Time-Out Data Sending Time-Out Socket Type (UDP/TCP)
	- Remote Address
	- TCP Connection Time-Out
Example	AT#SKTSAV OK socket parameters have been saved in NVM
Note	If some parameters are not previously specified then a default value will be stored.

#SKTSAV - Sock	et Parameters Save SELINT 2
AT#SKTSAV	Execution command stores the current socket parameters in the NVM of the device.
	The socket parameters to store are: - User ID - Password - Packet Size - Socket Inactivity Time-Out - Data Sending Time-Out - Socket Type (UDP/TCP)
	- Remote Port

page 463 of 604

80000ST10025a Rev. 10 - 2011-02-17

#SKTSAV - Socket Pa	arameters Save	SELINT 2
	- Remote Address	
	- TCP Connection Time-Out	
	Note: this command is not allowed for sockets associated t (see #SCFG).	to a GSM context
AT#SKTSAV=?	Test command returns the OK result code.	
Example	AT#SKTSAV OK socket parameters have been saved in NVM	
Note	If some parameters have not been previously specified the will be stored.	n a default value

3.5.7.6.13. Socket Parameters Reset - #SKTRST

#SKTRST - Socket Pa	arameters Reset	SELINT 0 / 1
AT#SKTRST	Execution command resets the socket parameters to the configuration and stores them in the NVM of the device. The socket parameters to reset are: - User ID	"factory default"
	 Password Packet Size Socket Inactivity Time-Out Data Sending Time-Out Socket Type Remote Port Remote Address 	
Example	- TCP Connection Time-Out AT#SKTRST OK socket parameters have been reset	

#SKTRST - Socket Pa	arameters Reset	SELINT 2
AT#SKTRST	Execution command resets the socket parameters to the configuration and stores them in the NVM of the device.	"factory default"
	The socket parameters to reset are: - User ID - Password - Packet Size - Socket Inactivity Time-Out - Data Sending Time-Out	

80000ST10025a Rev. 10 - 2011-02-17

#SKTRST - Socket Pa	arameters Reset	SELINT 2
	- Socket Type - Remote Port	
	- Remote Port	
	- TCP Connection Time-Out	
AT#SKTRST=?	Test command returns the OK result code.	
Example	AT#SKTRST OK	
	socket parameters have been reset	

3.5.7.6.14. GPRS Context Activation - #GPRS

<mark>#GPRS - GPRS C</mark>	Context Activation SELINT 0 / 1
AT#GPRS[= [<mode>]]</mode>	Execution command deactivates/activates the GPRS context, eventually proceeding with the authentication with the parameters given with #PASSW and #USERID .
	Parameter: <mode></mode> - GPRS context activation mode 0 - GPRS context deactivation request 1 - GPRS context activation request
	In the case that the GPRS context has been activated, the result code OK is preceded by the intermediate result code:
	+IP: <ip_address_obtained></ip_address_obtained>
	reporting the local IP address obtained from the network.
	Note: issuing AT#GPRS<cr></cr> reports the current status of the GPRS context, in the format:
	#GPRS: <status></status>
	where: <status></status> 0 - GPRS context deactivated 1 - GPRS context activated 2 - GPRS context activation pending.
	Note: issuing AT#GPRS=<cr></cr> is the same as issuing the command AT#GPRS=0<cr></cr> .

80000ST10025a Rev. 10 - 2011-02-17

#GPRS - GPRS Co	ontext Activation SELINT 0 / 1	
	 Note: if you request a GPRS context deactivation during a call issuing either AT#GPRS=0 or AT#EMAILACT=0 and then, after the call termination, you want to request a GPRS context activation through #GPRS, you need to issue the following sequence of three commands AT#GPRS=1 OK AT#GPRS=0 OK AT#GPRS=1 OK 	
AT#GPRS?	Read command has the same effect as the Execution command	
	AT#GPRS <cr>.</cr>	
AT#GPRS=?	Test command returns the allowed values for parameter <mode></mode> .	
Example	AT#GPRS=1 +IP: 129.137.1.1 OK Now GPRS Context has been activated and our IP is 129.137.1.1 AT#GPRS=0 OK Now GPRS context has been deactivated, IP is lost.	
Note	It is strongly recommended to use the same command (e.g. #GPRS) to activate the context, deactivate it and interrogate about its status.	

#GPRS - GPRS Context Activation SELINT 2		SELINT 2
AT#GPRS=	Execution command deactivates/activates the PDP context #1 , eventually	
[<mode>]</mode>	proceeding with the authentication with the parameters given with #PASSW and #USERID .	
	Parameter:	
	<mode> - PDP context activation mode 0 - PDP context #1 deactivation request</mode>	
	1 - PDP context #1 activation request	
	In the case that the PDP context #1 has been activated, th is preceded by the intermediate result code:	e result code OK
	+IP: <ip_address_obtained></ip_address_obtained>	
	reporting the local IP address obtained from the network.

80000ST10025a Rev. 10 - 2011-02-17

ext Activation SELINT 2
Note: at least a socket identifier needs to be associated with PDP context #1 in order to every #GPRS action be effective; by default the PDP context #1 is associated with socket identifiers 1 , 2 and 3 , but it is possible to modify these associations through #SCFG . Trying to issue a #GPRS action when no socket identifier is associated with PDP context #1 raises an error.
 Note: if the PDP context #1 has been activated issuing AT#GPRS=1, then if you request to deactivate the PDP context #1 issuing AT#EMAILACT=0 an ERROR is raised and nothing happens if you request to deactivate the PDP context #1 during a call issuing AT#GPRS=0 and then, after the call termination, you want to activate the PDP context #1 again through #GPRS, you need to issue the following sequence of three commands
AT#GPRS=1 OK AT#GPRS=0 OK AT#GPRS=1 OK
(Analogous considerations if you want to request the activation of PDP context #1 issuing AT#EMAILACT=1 , see #EMAILACT)
Note: this command is not allowed if GSM context has been activated (see AT#SGACT=0,1).
Read command reports the current status of the PDP context #1 , in the format:
#GPRS: <status></status>
where: <status> 0 - PDP context #1 deactivated 1 - PDP context #1 activated 2 - PDP context #1 activation pending.</status>
Test command returns the allowed values for parameter <mode></mode> .
AT#GPRS=1 +IP: 129.137.1.1 OK <i>Now PDP Context #1</i> has been activated and our IP is 129.137.1.1

80000ST10025a Rev. 10 - 2011-02-17

#GPRS - GPRS Context Activation		SELINT 2
	AT#GPRS=0	
	OK	
	Now PDP Context #1 has been deactivated, IP is lost.	
Note	It is strongly recommended to use the same command (e.c	j. #GPRS) to
	activate the context, deactivate it and interrogate about its	status.

3.5.7.6.15. Socket Dial - #SKTD

#SKTD - Socket Dial		SELINT 0 / 1
AT#SKTD	Set command opens the socket towards the peer specified	l in the
[= <socket type="">,</socket>	parameters.	
<remote port="">,</remote>		
<remote addr="">,</remote>	Parameters:	
[<closure type="">],</closure>	<socket type=""> - socket protocol type</socket>	
[<local port="">]]</local>	0 - TCP (factory default)	
	1 - UDP	
	<remote port=""> - remote host port to be opened</remote>	
	065535 - port number (factory default is 0)	
	<pre><remote addr=""> - address of the remote host, string type. can be either:</remote></pre>	This parameter
	- any valid IP address in the format: xxx.xxx.xxx.xxx	
	 any host name to be solved with a DNS query in the name> 	e format: <host< b=""></host<>
	(factory default is the empty string "")	
	<closure type=""> - socket closure behaviour for TCP</closure>	
	 0 - local host closes immediately when remote host has c 255 - local host closes after an escape sequence (+++) or disconnect from remote. 	
	<local port=""> - local host port to be used on UDP socket 065535 - port number</local>	
	Note: <closure type=""></closure> parameter is valid only for TCP sock sockets shall be left unused.	et type, for UDP
	Note: <local port=""></local> parameter is valid only for UDP socket sockets shall be left unused.	type, for TCP
	Note: the resolution of the host name is done when openin therefore if an invalid host name is given to the #SKTD cor error message will be issued.	-
	Note: the command to be successful requests that:	

80000ST10025a Rev. 10 - 2011-02-17

SELINT 0 / 1		
 the GPRS context 1 is correctly set with +CGDCONT 		
 the authentication parameters are set (#USERID, #PASSW) the GPRS 		
coverage is enough to permit a connection		
 the GPRS has been activated with AT#GPRS=1 		
Note: If all parameters are omitted then the behaviour of Set command is		
the same as Read command.		
Read command reports the socket dial parameters values, in the format:		
AT#SKTD: <socket type="">,<remote port="">,<remote addr="">,</remote></remote></socket>		
<closure type="">,<local port=""></local></closure>		
Test command returns the allowed values for the parameters.		
AT#SKTD=0,1024,"123.255.020.001",255 CONNECT		
AT#SKTD=1,1024,"123.255.020.001", ,1025 CONNECT		
<i>In this way my local port 1025 is opened to the remote port 1024</i>		
AT#SKTD=0,1024,"www.telit.net", 255 CONNECT		
The main difference between this command and #SKTOP is that this		
command does not interact with the GPRS context status, leaving it ON or		
OFF according to the #GPRS setting, therefore when the connection made		
with AT#SKTD is closed the context (and hence the local IP address) is		
maintained.		

#SKTD - Socket Dial		SELINT 2
AT#SKTD=	Set command opens the socket towards the peer specified in the	
[<socket type="">, <remote port="">,</remote></socket>	parameters.	
<remote addr="">,</remote>	Parameters:	
[<closure type="">],</closure>	<socket type=""> - socket protocol type</socket>	
[<local port="">]]</local>	0 - TCP (factory default)	
	1 - UDP	
	<remote port=""> - remote host port to be opened</remote>	
	165535 - port number	
	<remote addr=""> - address of the remote host, string type. T can be either:</remote>	his parameter
	- any valid IP address in the format: xxx.xxx.xxx	
	- any host name to be solved with a DNS query in th	e format: <host< b=""></host<>
	name>	
	(factory default is the empty string "")	
	<closure type=""> - socket closure behaviour for TCP</closure>

#SKTD - Socket Dial	SELINT 2	
	 0 - local host closes immediately when remote host has closed (default) 255 - local host closes after an escape sequence (+++) or after an abortive disconnect from remote. <local port=""> - local host port to be used on UDP socket</local> 065535 - port number Note: <closure type=""> parameter is valid only for TCP socket type, for UDP sockets shall be left unused.</closure> Note: <local port=""> parameter is valid only for UDP socket type, for TCP sockets shall be left unused.</local> Note: <local port=""> parameter is valid only for UDP socket type, for TCP sockets shall be left unused.</local> Note: the resolution of the host name is done when opening the socket, therefore if an invalid host name is given to the #SKTD command, then an error message will be issued. Note: the command to be successful requests that: the GPRS context 1 is correctly set with +CGDCONT the authentication parameters are set [#USERID, #PASSW] the GPRS coverage is enough to permit a connection the GPRS has been activated with AT#GPRS=1 Note: this command is not allowed for sockets associated to a GSM context (see #SCFG). 	
AT#SKTD?	Read command reports the socket dial parameters values, in the format: AT#SKTD: <socket type="">,<remote port="">,<remote addr="">, <closure type="">,<local port=""></local></closure></remote></remote></socket>	
AT#SKTD=?	Test command returns the allowed values for the parameters.	
Example	AT#SKTD=0,1024,"123.255.020.001",255 CONNECT AT#SKTD=1,1024,"123.255.020.001", ,1025 CONNECT In this way my local port 1025 is opened to the remote port 1024 AT#SKTD=0,1024,"www.telit.net", 255 CONNECT	
Note	The main difference between this command and #SKTOP is that this command does not interact with the GPRS context status, leaving it ON or OFF according to the #GPRS setting, therefore when the connection made with #SKTD is closed the context (and hence the local IP address) is maintained.	

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

3.5.7.6.16. Socket Listen - #SKTL

#SKTL - Socket Lis	sten SELINT 0 / 1
AT#SKTL	Execution command opens/closes the socket listening for connection
= <mode>,</mode>	requests.
<socket type="">,</socket>	
<input port=""/> ,	Parameters:
<closure type="">]]</closure>	<mode> - socket mode</mode>
	0 - closes socket listening
	1 - starts socket listening
	<pre><socket type=""> - socket protocol type 0 - TCP</socket></pre>
	<input port=""/> - local host input port to be listened 065535 - port number
	<closure type=""> - socket closure behaviour for TCP</closure>
	0 - local host closes immediately when remote host has closed (default)
	255 - local host closes after an escape sequence (+++) or after an abortiv
	disconnect from remote.
	Command returns the OK result code if successful.
	 Note: the command to be successful requests that: the GPRS context 1 is correctly set with +CGDCONT the authentication parameters are set (#USERID, #PASSW) the GPRS coverage is enough to permit a connection the GPRS has been activated with AT#GPRS=1
	When a connection request comes on the input port, if the sender is no filtered by the internal firewall (see command #FRWL), an unsolicited cod is reported:
	+CONN FROM: <remote addr=""></remote>
	Where: < remote addr> - host address of the remote machine that contacted th device.
	When the connection is established the CONNECT indication is given an the modem goes into data transfer mode.
	On connection close or when context is closed with #GPRS=0 the socket i closed and no listen is anymore active.

page 471 of 604

80000ST10025a Rev. 10 - 2011-02-17

#SKTL - Socket L	isten SELINT 0 / 1
	If the context is closed by the network while in listening, the socket is closed, no listen is anymore active and an unsolicited code is reported:
	#SKTL: ABORTED
	Note: if all parameters are omitted the command returns the current socket listening status and the last settings of parameters <input port=""/> and <closure type=""></closure> , in the format:
	#SKTL: <status>,<input port=""/>,<closure type=""> where</closure></status>
	<status> - socket listening status 0 - socket not listening 1 - socket listening</status>
AT#SKTL?	Read command has the same effect as Execution command when parameters are omitted.
AT#SKTL=?	Test command returns the allowed values for parameters <mode>, <input port> and <closure type="">.</closure></input </mode>
Example	Activate GPRS AT#GPRS=1 +IP: ###.###.### OK Start listening AT#SKTL=1,0,1024 OK or AT#SKTL=1,0,1024,255 OK Receive connection requests +CONN FROM: 192.164.2.1 CONNECT
	exchange data with the remote host
	send escape sequence +++ NO CARRIER Now listen is not anymore active
	<i>to stop listening</i> AT#SKTL=0,0,1024, 255 OK
Note	The main difference between this command and the #SKTD is that #SKTL

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

80000ST10025a Rev. 10 - 2011-02-17

#SKTL - Socket Liste	<mark>n</mark>	SELINT 0 / 1
	does not contact any peer, nor does any interaction with t status, leaving it ON or OFF according to the #GPRS s when the connection made with #SKTL is closed the conte local IP address) is maintained.	setting, therefore
	The improving command @SKTL has been defined.	

#SKTL - Socket Lis	ten SELINT 2	
AT#SKTL	Execution command opens/closes the socket listening for connection	
=[<mode>,</mode>	requests.	
<socket type="">,</socket>		
<input port=""/> ,	Parameters:	
[<closure type="">]]</closure>	<mode> - socket mode</mode>	
	0 - closes socket listening	
	1 - starts socket listening	
	<socket type=""> - socket protocol type</socket>	
	0 -TCP (default)	
	1- UDP	
	<pre><input port=""/> - local host input port to be listened</pre>	
	165535 - port number	
	<closure type=""> - socket closure behaviour for TCP</closure>	
	0 - local host closes immediately when remote host has closed (default)	
	255 - local host closes after an escape sequence (+++)	
	Command returns the OK result code if successful.	
	Note: the command to be successful requests that:	
	 the GPRS context 1 is correctly set with +CGDCONT 	
	 the authentication parameters are set (#USERID, #PASSW) 	
	 the GPRS coverage is enough to permit a connection 	
	 the GPRS has been activated with AT#GPRS=1 	
	When a connection request comes on the input port, if the sender is not filtered by the internal firewall (see command #FRWL), an unsolicited cod is reported:	e
	+CONN FROM: <remote addr=""></remote>	
	Where:	
	<remote addr=""> - host address of the remote machine that contacted the device.</remote>	ıe

3.5.7.6.18. Socket Listen Ring Indicator - #E2SLRI

#E2SLRI - Socket Lis	sten Ring Indicator	SELINT 0 / 1 / 2
AT#E2SLRI=[<n>]</n>	Set command enables/disables the Ring Indicator pin response to a Socket Listen connect and, if enabled, the duration of the negative going pulse generated on receipt of connect.	
	Parameter: <n></n> - RI enabling 0 - RI disabled for Socket Listen connect (factory default) 501150 - RI enabled for Socket Listen connect; a negative going pulse is generated on receipt of connect and <n></n> is the duration in ms of this pulse.	
AT#E2SLRI?	Read command reports whether the Ring Indicator pin res Listen connect is currently enabled or not, in the format: #E2SLRI: <n></n>	ponse to a Socket
AT#E2SLRI=?	Test command returns the allowed values for parameter <	status>.

3.5.7.6.19. Firewall Setup - #FRWL

#FRWL - Firewall Se	tup	SELINT 0 / 1
AT#FRWL[=	Execution command controls the internal firewall settings.	
<action>,</action>		

#FRWL - Firewall S	etup SELINT 0 / 1	
<ip_addr>,</ip_addr>	Parameters:	
<net_mask>]</net_mask>	<action> - command action</action>	
	0 - remove selected chain	
	1 - add an ACCEPT chain	
	2 - remove all chains (DROP everything); <ip_addr> and <net_mask> h</net_mask></ip_addr>	nas
	no meaning in this case.	
	<pre><ip_addr> - remote address to be added into the ACCEPT chain; str</ip_addr></pre>	•
	type, it can be any valid IP address in the format: xxx.xxx.xxx.	
	<pre><net_mask> - mask to be applied on the <ip_addr>; string type, it can any valid IP address mask in the format: xxx.xxx.xxx</ip_addr></net_mask></pre>	be
	Command returns OK result code if successful.	
	Note: the firewall applies for incoming (listening) connections only.	
	Firewall general policy is DROP , therefore all packets that are not includ into an ACCEPT chain rule will be silently discarded.	ded
	When a packet comes from the IP address incoming_IP , the firewall ch rules will be scanned for matching with the following criteria:	ain
	incoming_IP & <net_mask> = <ip_addr> & <net_mask></net_mask></ip_addr></net_mask>	
	If criteria is matched, then the packet is accepted and the rule scan finished; if criteria is not matched for any chain the packet is siler dropped.	
	Note: If all parameters are omitted the command reports the list of ACCEPT chain rules registered in the Firewall settings in the format: #FRWL: <ip_addr>,<net_mask> #FRWL: <ip_addr>,<net_mask></net_mask></ip_addr></net_mask></ip_addr>	all
	 OK	
AT#FRWL?	Read command has the same effect as Execution command wh parameters are omitted.	nen
AT#FRWL=?	Test command returns the allowed values for parameter <action>.</action>	
Example	Let assume we want to accept connections only from our devices which a	are
	on the IP addresses ranging from 197.158.1.1 to 197.158.255.255	
	We need to add the following chain to the firewall: AT#FRWL=1,"197.158.1.1","255.255.0.0"	

#FRWL - Firewa	all Setup	SELINT 0 / 1
	OK	
Note	For outgoing connections made with #SKTOP and #S is dynamically inserted into the ACCEPT chain for duration. Therefore the #FRWL command shall be us either the #SKTL or the @SKTL behaviour, decide allowed to connect to the local device.	r all the connection used only for defining ing which hosts are
	Rules are not saved in NVM, at startup the rules list wi	ll be empty.

#FRWL - Firewall	Setup SELINT 2
AT#FRWL=	Execution command controls the internal firewall settings.
[<action>,</action>	
<ip_address>,</ip_address>	Parameters:
<net mask="">]</net>	<action> - command action</action>
	0 - remove selected chain
	1 - add an ACCEPT chain
	2 - remove all chains (DROP everything); <ip_addr> and <net_mask> has no meaning in this case.</net_mask></ip_addr>
	<pre>in the case. </pre> in this case. in this case. in this case. <pre>in this case. </pre>
	type, it can be any valid IP address in the format: xxx.xxx.xxx
	<pre><net_mask> - mask to be applied on the <ip_addr>; string type, it can be</ip_addr></net_mask></pre>
	any valid IP address mask in the format: xxx.xxx.xxx
	Command returns OK result code if successful.
	Note: the firewall applies for incoming (listening) connections only.
	Firewall general policy is DROP , therefore all packets that are not included into an ACCEPT chain rule will be silently discarded.
	When a packet comes from the IP address incoming_IP , the firewall chain rules will be scanned for matching with the following criteria:
	incoming_IP & <net_mask> = <ip_addr> & <net_mask></net_mask></ip_addr></net_mask>
	If criteria is matched, then the packet is accepted and the rule scan is
	finished; if criteria is not matched for any chain the packet is silently dropped.
AT#FRWL?	Read command reports the list of all ACCEPT chain rules registered in the
	Firewall settings in the format:
	#FRWL: <ip_addr>,<net_mask></net_mask></ip_addr>

80000ST10025a Rev. 10 - 2011-02-17

#FRWL - Firewa	ll Setup	SELINT 2
	#FRWL: <ip_addr>,<net_mask></net_mask></ip_addr>	
	OK	
AT#FRWL=?	Test command returns the allowed values for par	rameter <action>.</action>
Example	<i>Let assume we want to accept connections only f on the IP addresses ranging from 197.158.1.1 to 197.158.255.255</i>	
	We need to add the following chain to the firewald AT#FRWL=1,"197.158.1.1","255.255.0.0" OK	<i>l:</i>
Note	For outgoing connections made with #SKTOP and is dynamically inserted into the ACCEPT chain for duration. Therefore the #FRWL command shall b the #SKTL behaviour, deciding which hosts are a local device.	r all the connection be used only for defining
	Rules are not saved in NVM, at startup the rules l	list will be empty.

3.5.7.6.20. GPRS Data Volume - #GDATAVOL

#GDATAVOL - GPRS	Data Volume SELINT 2
AT#GDATAVOL= [<mode>]</mode>	Execution command reports, for every active PDP context, the amount of data the last GPRS session (and the last GSM session, if GSM context is active) received and transmitted, or it will report the total amount of data received and transmitted during all past GPRS (and GSM) sessions, since last reset.
	Parameter: <mode> 0 - it resets the GPRS data counter for the all the available PDP contexts (1-5) and GSM data counter for GSM context 0 1 - it reports the last GPRS session data counter for the all the set PDP contexts (i.e. all the PDP contexts with APN parameter set using +CGDCONT) (and the last GSM session data counter for the GSM context, if set through #GSMCONT), in the format:</mode>
	#GDATAVOL: <cid<i>n>,<tot<i>n>,<sent<i>n>,<received<i>n>[<cr><lf> #GDATAVOL: <cid<i>m>,<tot<i>m>,<sent<i>m>,<received<i>m>[]] where: <cid<i>n> - PDP context identifier</cid<i></received<i></sent<i></tot<i></cid<i></lf></cr></received<i></sent<i></tot<i></cid<i>

80000ST10025a Rev. 10 - 2011-02-17

#GDATAVOL - GPRS	Data Volume	SELINT 2	
	0 - specifies the GSM context		
	15 - numeric parameter which specifies a particular definition	PDP context	
	<tot n=""> - number of bytes either received or transmitter</tot>	ed in the last GPRS	
	(or GSM) session for <cid< b=""><i>n</i>> PDP context;</cid<>		
	sent <i>n</i> > - number of bytes transmitted in the last GPRS (or GSM) session for <cid< b=""><i>n</i>> PDP context;</cid<>		
	<received n=""> - number of bytes received in the last GP session for <cid n=""> PDP context;</cid></received>	RS (or GSM)	
	2 - it reports the total GPRS data counter, since last res		
	set PDP contexts (i.e. all the PDP context with APN pa	U U	
	+CGDCONT) and the total GSM data counter for the GS through #GSMCONT, in the format:	SM CONTEXT, IT SET	
	#GDATAVOL: <cid<i>n>,<tot<i>n>,<sent<i>n>,<received<i>n>[<cr><lf> #GDATAVOL: <cid<i>m>,<tot<i>m>,<sent<i>m>,<received<i>m>[]]</received<i></sent<i></tot<i></cid<i></lf></cr></received<i></sent<i></tot<i></cid<i>		
	where:		
	<cid<i>n> - PDP context identifier</cid<i>		
	0 - specifies the GSM context		
	 15 - numeric parameter which specifies a particular PDP context definition 		
	<pre><totn> - number of bytes either received or transmitte</totn></pre>	since last reset, for <cid<i>n></cid<i> PDP context; tes transmitted, in every GPRS (or GSM) session	
	<pre>since tast reset, for <ciu 1="" context;<br="" d1=""><received n=""> - number of bytes received, in every GPRS (or GSM) session since last reset, for <ciu></ciu>ciu/> PDP context;</received></ciu></pre>		
	Note: last GPRS and GSM session counters are not saved are loosen at power off.	in NVM so they	
	Note: total GPRS and GSM session counters are saved on	NVM.	
AT#GDATAVOL=?	Test command returns the range of supported values for <mode>.</mode>	parameter	

3.5.7.6.21. ICMP Ping Support - #ICMP

#ICMP - ICMP Ping Support		SELINT 2
AT#ICMP= <mode></mode>	Set command enables/disables the ICMP Ping support.	

80000ST10025a Rev. 10 - 2011-02-17

<mark>#ICMP - ICMP Pi</mark>	ng Support	SELINT 2
	Parameter: <pre></pre>	pinging it; this subset of ough #FRWL (see)
AT#ICMP?	Read command returns whether the ICMP Ping su enabled or not, in the format: #ICMP: <mode></mode>	ipport is currently
AT#ICMP=?	Test command reports the supported range of valuparameter.	ues for the <mode></mode>

3.5.7.6.22. Maximum TCP Payload Size - #TCPMAXDAT

#TCPMAXDAT - Max	imum TCP Payload Size	SELINT 2
AT#TCPMAXDAT= <size></size>	Set command allows to set the maximum TCP payload size in TCP header options.	
	 Parameter: <size> - maximum TCP payload size accepted in one single datagram; it is sent in TCP header options in SYN p</size> 0 - the maximum TCP payload size is automatically handl (default). 4961420 - maximum TCP payload size 	acket.
AT#TCPMAXDAT?	Read command reports the current maximum TCP payload format: #TCPMAXDAT: <size></size>	d size, in the
AT#TCPMAXDAT=?	Test command reports the supported range of values for p	arameter <size></size>

3.5.7.6.23. TCP Reassembly - #TCPREASS

#TCPREASS - TCP Reassembly

SELINT 2

80000ST10025a Rev. 10 - 2011-02-17

#TCPREASS - TCP R	eassembly	SELINT 2
AT#TCPREASS=	Set command enables/disables the TCP reassembly featu	Ire , in order to
<n></n>	handle fragmented TCP packets.	
	Parameter:	
	<n></n>	
	0 - disable TCP reassembly feature (default)	
	1 - enable TCP reassembly feature	
AT#TCPREASS?	Read command returns whether the TCP reassembly featurnot, in the format:	ire is enabled or
	#TCPREASS: <n></n>	
AT#TCPREASS=?	Test command returns the supported range of values for p	arameter <n></n> .

3.5.7.6.24. PING request - #PING

#PING – Send PING request		
AT#PING= <ipaddr>[,<retrynu m>[,<len>[,<timeou t>[,<ttl>]]]]</ttl></timeou </len></retrynu </ipaddr>	This command is used to send Ping Echo Request messages and to receive the corresponding Echo Reply.	
	Parameters: <ipaddr> - address of the remote host, string type. This parameter can be either: - any valid IP address in the format: "xxx.xxx.xxx." - any host name to be solved with a DNS query <retrynum> - the number of Ping Echo Request to send 1-64 (default 4) <len> - the lenght of Ping Echo Request message 32-1460 (default 32) <timeout> - the timeout, in 100 ms units, waiting a single Echo Reply 1-600 (default 50) <ttl> - time to live 1-255 (default 128) Once the single Echo Reply message is receive a string like that is displayed: #PING: <replyid>,<ip address="">,<replytime>,<ttl></ttl></replytime></ip></replyid></ttl></timeout></len></retrynum></ipaddr>	

#PING – Send PING	request
	Where: <replyid> - Echo Reply number <ip address=""> - IP address of the remote host <replytime> - time, in 100 ms units, required to receive the response <ttl> - time to live of the Echo Reply message Note1: when the Echo Request timeout expires (no reply received on time) the response will contain <replytime> set to 600 and <ttl> set to 255 Note2: To receive the corresponding Echo Reply is not required to enable separately AT#ICMP Note3: Before send PING Request the GPRS context must have been activated by AT#SGACT=1,1</ttl></replytime></ttl></replytime></ip></replyid>
AT#ICMP=?	Test command reports the supported range of values for the #PING command parameters.
Example	AT#PING="www.telit.com" #PING: 01,"81.201.117.177",6,50 #PING: 02,"81.201.117.177",5,50 #PING: 03,"81.201.117.177",6,50 #PING: 04,"81.201.117.177",5,50 OK

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

3.5.7.7. E-mail Management AT Commands

3.5.7.7.1. E-mail SMTP Server - #ESMTP

<mark>#ESMTP - E-mail</mark>	SMTP Server SELINT 0 / 1		
AT#ESMTP	Set command sets the SMTP server address, used for E-mail sending.		
[= <smtp>]</smtp>	SMTP server can be specified as IP address or as nick name.		
	Parameter:		
	smtp> - SMTP server address, string type. This parameter can be either: any valid IP address in the format: xxx.xxx.xxx any host name to be solved with a DNS query in the format: 		
	name> (factory default is the empty string "")		
	Note: the max length for <smtp></smtp> is the output of Test command.		
	Note: If parameter is omitted then the behaviour of Set command is the		
	same of Read command		
AT#ESMTP?	Read Command reports the current SMTP server address, in the format:		
	#ESMTP: <smtp></smtp>		
AT#ESMTP=?	Test command returns the max length for the parameter <smtp>.</smtp>		
Example	AT#ESMTP="smtp.mydomain.com" OK		
Note	The SMTP server used shall be inside the APN space (the smtp server		
	provided by the network operator) or it must allow the Relay, otherwise it		
	will refuse to send the e-mail.		

#ESMTP - E-mail SM	TP Server	SELINT 2	
AT#ESMTP=	Set command sets the SMTP server address, used for E-mail sending.		
[<smtp>]</smtp>	SMTP server can be specified as IP address or as nick name.		
	Parameter: < smtp> - SMTP server address, string type. This paramete - any valid IP address in the format: xxx.xxx.xxx		

80000ST10025a Rev. 10 - 2011-02-17

#ESMTP - E-mail SM	TP Server SELINT 2	
	 any host name to be solved with a DNS query in the format: <host name=""> (factory default is the empty string "")</host> 	
	Note: the max length for <smtp></smtp> is the output of Test command.	
AT#ESMTP?	Read Command reports the current SMTP server address, in the format: #ESMTP: <smtp></smtp>	
AT#ESMTP=?	Test command returns the max length for the parameter <smtp></smtp> .	
Example	AT#ESMTP="smtp.mydomain.com" OK	
Note	The SMTP server used shall be inside the APN space (the smtp server provided by the network operator) or it must allow the Relay, otherwise it will refuse to send the e-mail.	

3.5.7.7.2. E-mail Sender Address - #EADDR

#EADDR - E-mail Se	nder Address	SELINT 0 / 1		
AT#EADDR [= <e-addr>]</e-addr>	Set command sets the sender address string to be used for sending the mail.			
	 Parameter: <e-addr> - sender address, string type.</e-addr> - any string value up to max length reported in the Test command. (factory default is the empty string "") 			
	Note: If parameter is omitted then the behaviour of Set command is the same of Read command			
AT#EADDR?	Read command reports the current sender address, in the format: #EADDR: <e-addr></e-addr>			
AT#EADDR=?	Test command returns the maximum allowed lengt parameter <e-addr>.</e-addr>	th of the string		
Example	AT#EADDR="me@email.box.com" OK AT#EADDR? #EADDR: "me@email.box.com" OK			

#EADDR - E-mail Se	nder Address	SELINT 2
AT#EADDR=	Set command sets the sender address string to be used	for sending the e-
[<e-add>]</e-add>	mail.	

80000ST10025a Rev. 10 - 2011-02-17

#EADDR - E-mail Se	ender Address SELINT :	2
	Parameter: <e-addr> - sender address, string type. - any string value up to max length reported in the Test command (factory default is the empty string "")</e-addr>	d.
AT#EADDR?	Read command reports the current sender address, in the format: #EADDR: <e-addr></e-addr>	
AT#EADDR=?	Test command returns the maximum allowed length of the string parameter <e-addr></e-addr> .	
Example	AT#EADDR="me@email.box.com" OK AT#EADDR? #EADDR: "me@email.box.com" OK	

3.5.7.7.3. E-mail Authentication User Name - #EUSER

#FUSER - E-mail Δι	uthentication User Name SELINT 0 / 1			
AT#EUSER				
	Set command sets the user identification string to be used during the			
[= <e-user>]</e-user>	authentication step of the SMTP.			
	Parameter:			
	<e-user> - e-mail authentication User ID, string type.</e-user>			
	 any string value up to max length reported in the Test command. (factory default is the empty string "") 			
	Note: if no authentication is required then the <e-user></e-user> parameter shall lempty "".			
	Note: If parameter is omitted then the behaviour of Set command is the same of Read command			
AT#EUSER?	Read command reports the current user identification string, in the format:			
	#EUSER: <e-user></e-user>			
AT#EUSER=?	Test command returns the maximum allowed length of the string parameter <e-user></e-user> .			
Example	AT#EUSER="myE-Name" OK AT#EUSER? #EUSER: "myE-Name"			
	OK			
Note	It is a different user field than the one used for GPRS authentication (see			

80000ST10025a Rev. 10 - 2011-02-17

#EUSER - E-mail	Authentication User Name	SELINT 0 / 1	
	#USERID).		
<mark>#EUSER - E-mail</mark>	Authentication User Name	SELINT 2	
AT#EUSER=	Set command sets the user identification string to be used during the		
[<e-user>]</e-user>	authentication step of the SMTP.		
Parameter:			
	e-user> - e-mail authentication User ID, string type	9.	
	 any string value up to max length reported in the Test comm (factory default is the empty string "") 		
	Note: if no authentication is required then the <e-user></e-user> parameter sh empty "".		
AT#EUSER?	Read command reports the current user identificatio	on string, in the format:	
	#EUSER: <e-user></e-user>		
AT#EUSER=?	Test command returns the maximum allowed length of the string parameter <e-user></e-user> .		
Example	AT#EUSER="myE-Name" OK AT#EUSER? #EUSER: "myE-Name"		
	OK		
Note	It is a different user field than the one used for GPRS #USERID).	authentication (see	

3.5.7.7.4. E-mail Authentication Password - #EPASSW

#EPASSW - E-mail A	uthentication Password SELINT 0 / 1		
AT#EPASSW= <e-pwd></e-pwd>	Set command sets the password string to be used during the authentication step of the SMTP. Parameter: <e-pwd> - e-mail authentication password, string type. - any string value up to max length reported in the Test command. (factory default is the empty string "")</e-pwd>		
	Note: if no authentication is required then the <e-pwd></e-pwd> parameter shall be empty "".		
AT#EPASSW=?	Test command returns the maximum allowed length of the string parameter <e-pwd></e-pwd> .		
Example	AT#USERID="myPassword"		

80000ST10025a Rev. 10 – 2011-02-17

#EPASSW - E-mail Authentication Password		SELINT 0 / 1
	OK	
Note	It is a different password field than the one used for GPI (see #PASSW).	RS authentication

#EPASSW - E-mail A	uthentication Password	SELINT 2
AT#EPASSW= [<e-pwd>]</e-pwd>	1 5 5	
	 Parameter: <e-pwd> - e-mail authentication password, string type.</e-pwd> - any string value up to max length reported in the Test (factory default is the empty string "") Note: if no authentication is required then the <e-pwd> parents</e-pwd> 	
AT#EPASSW=?	Test command returns the maximum allowed length of the parameter <e-pwd></e-pwd> .	e string
Example	AT#EPASSW="myPassword" OK	
Note	It is a different password field than the one used for GPRS (see #PASSW).	authentication

3.5.7.7.5. E-mail Sending With GPRS Context Activation - #SEMAIL

#SEMAIL - E-mail Se	ending With GPRS Context Activation	SELINT 0 / 1
AT#SEMAIL= <da>,</da>	Execution command activates a GPRS context, if not previously activated	
<subj></subj>	 by #EMAILACT, and sends an e-mail message. The GPRS context is deactivated when the e-mail is sent. Parameters: <da> - destination address, string type (maximum length 100 characters).</da> <subj> - subject of the message, string type (maximum length 100 characters).</subj> 	
	The device responds to the command with the prompt '>' a the message body text. To complete the operation send Ctrl-Z char (0x1A hex); to writing the message send ESC char (0x1B hex).	

80000ST10025a Rev. 10 - 2011-02-17

#SEMAIL - E-mail S	ending With GPRS Context Activation SELINT 0 / 1
	If e-mail message is successfully sent, then the response is OK .
	If message sending fails for some reason, an error code is reported.
	Note: if the length of one of the string type parameters exceeds the maximum length, then the string is truncated.
	Note: Care must be taken to ensure that during the command execution, no other commands are issued.
	To avoid malfunctions is suggested to wait for the OK or ERROR / +CMS ERROR:<err></err> response before issuing further commands.
	Note: maximum length for message body is 1024 bytes, trying to send
	more data will cause the surplus to be discarded and lost.
Example	AT#SEMAIL="me@myaddress.com","subject of the mail" >message body this is the text of the mail message CTRL-Z
	wait
	OK
	Message has been sent.
Note	This command is obsolete. It's suggested to use the couple #EMAILACT
	and <u>#EMAILD</u> instead of it.

#SEMAIL - E-mail Se	ending With GPRS Context Activation SELINT 2	
AT#SEMAIL=[<da>,<</da>	Execution command activates a GPRS context, if not previously activated	
subj>	by #EMAILACT , and sends an e-mail message. The GPRS context is	
]	deactivated when the e-mail is sent.	
	Parameters: <da> - destination address, string type. (maximum length 100 characters) <subj> - subject of the message, string type. (maximum length 100 characters)</subj></da>	
	The device responds to the command with the prompt '>' and awaits for the message body text.	
	To complete the operation send Ctrl-Z char (0x1A hex); to exit without writing the message send ESC char (0x1B hex).	
	If e-mail message is successfully sent, then the response is OK . If message sending fails for some reason, an error code is reported.

	the surplus to be discarded and lost.	
AT#EMAILD=?	Test command returns the OK result code.	
Example	AT#EMAILD="me@myaddress.com","subject of >message body this is the text of the CTRL-Z Wait OK Message has been sent.	
Note	The only difference between this command and the #SEMAIL is that this command doe GPRS context status, leaving it ON or OFF a #EMAILACT (#SGACT) setting, thus, when #EMAILD is closed, the context status is m	es not interact with the according to the the connection made with

3.5.7.7.8. E-mail Parameters Save - #ESAV

#ESAV - E-mail Para	meters Save SELINT 0 / 1
AT#ESAV	Execution command stores the e-mail parameters in the NVM of the device.
	The e-mail parameters to store are:
	- E-mail User Name
	- E-mail Password
	- E-mail Sender Address
	- E-mail SMTP server
Note	If some parameters have not been previously specified then a default value
	will be taken.

<mark>#ESAV - E-mail Para</mark>	Imeters Save SELINT 2
AT#ESAV	Execution command stores the e-mail parameters in the NVM of the device.
	The e-mail parameters to store are:
	- E-mail User Name
	- E-mail Password
	- E-mail Sender Address
	- E-mail SMTP server
AT#ESAV=?	Test command returns the OK result code.
Note	If some parameters have not been previously specified then a default value
	will be taken.

3.5.7.7.9. E-mail Parameters Reset - #ERST

80000ST10025a Rev. 10 - 2011-02-17

#ERST - E-mail	Parameters Reset	SELINT 0 / 1
AT#ERST	Execution command resets the e-mail parameters to the configuration and stores them in the NVM of the device.	e "factory default"
	The e-mail parameters to reset are: - E-mail User Name - E-mail Password - E-mail Sender Address - E-mail SMTP server	

<mark>#ERST - E-mail Para</mark>	ameters Reset	SELINT 2
AT#ERST	Execution command resets the e-mail parameters to the configuration and stores them in the NVM of the device. The e-mail parameters to reset are: - E-mail User Name - E-mail Password - E-mail Sender Address	"factory default"
	- E-mail SMTP server	
AT#ERST=?	Test command returns the OK result code.	

3.5.7.7.10. SMTP Read Message - #EMAILMSG

#EMAILMSG - SMTP Read Message SELINT 0		SELINT 0 / 1
AT#EMAILMSG	Execution command returns the last response from SMTP	server.
AT#EMAILMSG?	Read command has the same behaviour as Execution com	mand.

#EMAILMSG - SMTP	#EMAILMSG - SMTP Read Message SELINT 2	
AT#EMAILMSG	Execution command returns the last response from SMTP	server.
AT#EMAILMSG=?	Test command returns the OK result code.	

3.5.7.7.11. **#SMTPCL** – send mail with attachment - **#SMTPCL**

#SMTPCL - send mail with attachment SELINT 2		SELINT 2
AT#SMTPCL= <da>,<subj>,<att> [,<filename>,<encod>]</encod></filename></att></subj></da>	This command permits to send an email with diff attachments if GPRS context has already been ac (#SGACT,#EMAILACT or #GPRS).	
	After sending message body text (as with #EMAI switch to online mode if attachment has to be se	

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

AT#SMTPCL=?	Test command reports the supported range of values for parameters <da>,<subj>,<att>[,<filename>,<encod>]</encod></filename></att></subj></da>
	Note: if <att></att> 1 or 2 and <filename></filename> is not present, command will return an ERROR
	Note: if <att>=</att> 0 and <filename></filename> is present and not empty, the attachment won't be considered
	Note: If a txt file (<att>=</att> 1) is attached, only <encod></encod> 0("7bit") is possible. If a binary file (<att>=</att> 2) is attached, only <encod></encod> 1("base64") is possible.
	Note: if no attachment (<att></att> 0) has to be sent, the behavior is the same as with #EMAILD. OK after CTRL-Z is returned(if connection was successful), the switch to online mode is not performed.
	<pre><filename> - attached file name (maximum length 50 characters) <encod> -Content-Transfer-Encoding used for attachment 0 - "7bit" means data all represented as short lines of US-ASCII data 1 - "base64" designed to represent arbitrary sequences of octets in a form that need not be humanly readable</encod></filename></pre>
	Parameters: <da> - destination address, string type. (maximum length 100 characters) <subj> - subject of the message, string type. (maximum length 100 characters) <att> - attached file flag 0 - no attachment 1 - attach a txt file 2 - attach a binary file(jpg,bin,pdf,)</att></subj></da>
	 While in online mode data received on the serial port are transmitted on the SMTP socket as MIME attachment. The escape sequence has to be sent to close the SMTP connection. Encoding of data received on the serial port is performed if required (binary data), before transmission on the SMTP socket.

80000ST10025a Rev. 10 - 2011-02-17

Examples	at#smtpcl="me@myaddress.com","test1",1,"sample.txt",0 >message bodythis is the text of the mail message Send CTRL-Z CONNECT data received on the serial port are sent as attachment Send escape sequence to close the SMTP connection +++ NO CARRIER at#smtpcl="me@myaddress.com","test2",2,"image.jpg",1 >message bodythis is the text of the mail message Send CTRL-Z
	CONNECT data received on the serial port are base64-encoded and sent as attachment Send escape sequence to close the SMTP connection +++ NO CARRIER

3.5.7.8. Easy Scan® Extension AT Commands

0

NOTE:

it is strongly suggested to issue all the Easy Scan® Extension AT commands with **NO SIM** inserted, to avoid a potential conflict with normal module operations, such as "incoming call", "periodic location update, "periodic routing area update" and so on.

	<cellstatus> - string type; it is the cell status</cellstatus>
	CELL_SUITABLE - C0 is a suitable cell.
	CELL_LOW_PRIORITY - the cell is low priority based on the received
	system information.
	CELL FORBIDDEN - the cell is forbidden.
	CELL_BARRED - the cell is barred based on the received system
	information.
	CELL_LOW_LEVEL - the cell <rxlev></rxlev> is low.
	CELL_OTHER - none of the above e.g. exclusion timer running, no BCCH
	availableetc.
	<numarfcn> - decimal number; it is the number of valid channels in the</numarfcn>
	Cell Channel Description
	<arfcn<i>n> - decimal number; it is the arfcn of a valid channel in the Cell</arfcn<i>
	Channel Description (<i>n</i> is in the range 1<numarfcn></numarfcn>)
	end <numchannels> - decimal number; it is the number of valid channels in</numchannels>
	the BCCH Allocation list; the output of this information for non-
	serving cells depends on last #CSURVEXT setting:
	if #CSURVEXT=0 this information is displayed only for
	serving cell
	3. if #CSURVEXT=1 or 2 this information is displayed also for
	every valid scanned BCCH carrier.
	ba n> - decimal number; it is the arfcn of a valid channel in the BA list (n)
	is in the range 1<numchannels></numchannels>); the output of this
	information for non-serving cells depends on last #CSURVEXT
	setting:
	2. if #CSURVEXT=0 this information is displayed only for
	serving cell
	3. if #CSURVEXT=1 or 2 this information is displayed also for
	every valid scanned BCCH carrier.
	(The following informations will be printed only if GPRS is supported in the
	cell)
	<pre><pre><pre><pre><pre><pre><pre>cent</pre><pre><pre><pre><pre><pre><pre><pre><</pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre>
	0 - pbcch not activated on the cell
	1 - pbcch activated on the cell

page 504 of 604

URV - Netw	ork Survey	SELINT 2
	<nom> - network operation mode</nom>	
	1	
	2	
	3	
	<rac> - routing area code</rac>	
	0255 -	
	<spgc> - SPLIT_PG_CYCLE support</spgc>	
	0 - SPLIT_PG_CYCLE is not supported on CCCH on this ce	ell
	1 - SPLIT_PG_CYCLE is supported on CCCH on this cell	
	at - priority access threshold	
	0 -	
	36 -	
	<nco> - network control order</nco>	
	02 -	
	<t3168> - timer 3168</t3168>	
	<t3192> - timer 3192</t3192>	
	<drxmax> - discontinuous reception max time (in seconds)</drxmax>)
	<ctrlack> - packed control ack</ctrlack>

	arfcn: 14 rxLev: 8
	Network survey ended
	OK
Note	The command is executed within max. 2 minute.

3.5.7.8.2. Network Survey - #CSURVC

#CSURVC - Network	Survey (Numeric Format) SELINT 0 / 1	
AT#CSURVC	Execution command allows to perform a quick survey through channels	
[= <s>,<e>]</e></s>	belonging to the band selected by last #BND command issue, starting	
	from channel <s></s> to channel <e></e> . If parameters are omitted, a full band	
AT*CSURVC	scan is performed.	
[= <s>,<e>]</e></s>		
	Parameters:	
possible)	<s> - starting channel</s>	
	<e> - ending channel</e>	
	After issuing the command the device responds with the string:	
	Network survey started	
	and, after a while, a list of informations, one for each received carrier, is reported, each of them in the format:	
	(For BCCH-Carrier)

#STSR - SIM Too	okit Send Response SELINT 2	
	<i>Select Item</i> <data> - contains the item identifier selected by the user</data>	
	Note: Use of icons is not supported. All icon related actions will respond with n icon available.	0
AT#STSR?	The read command can be used to request the currently ongoing proact command and the SAT state in the format	ive
	#STSRI: <state>,<cmdtype></cmdtype></state> where: <state></state> - SAT interface state (see #STIA) <cmdtype></cmdtype> - ongoing proactive command	
	An error message will be returned if there is no pending command.	
AT#STSR=?	Test command returns the range for the parameters <state></state> and <cmdtype></cmdtype> .	

3.5.7.9.4. SIM Tookit terminal Attach - #STTA

<mark>#STTA –</mark> SIM Toolkit Terminal Attach SELINT 2	
AT#STTA= <state></state>	This command attaches/detaches the SIM Toolkit application to the AT instance reserved for this use. Parameters: <state>: attached state</state>
	0 – SIM Toolkit detaches 1 – SIM Toolkit attaches If SIM Toolkit application has been already attached/detached the command does nothing and returns OK.
AT#STTA?	Read command reports the current <state></state> in the format: #STTA: <state></state>
AT#STTA=?	Test command reports the supported range of values for parameter <state></state>
Note	The AT instance reserved for the SIM Toolkit application is the #3.

80000ST10025a Rev. 10 - 2011-02-17

Issuing AT#STTA= <state> when the AT instance has been already attached to another service (CMUX, SMSATRUN/TCPATRUN, 0TA)</state>
causes an ERROR result code to be returned.

3.5.7.10. Jammed Detect & Report AT Commands

3.5.7.10.1. Jammed Detect & Report - #JDR

#JDR - Jammed	Detect & Report SELINT 0 / 1	
AT#JDR[=	Set command allows to control the Jammed Detect & Report feature.	
[<mode></mode>		
[, <mnpl>,</mnpl>	The MODULE can detect if a communication Jammer is active in its range	
<dcmn>]]]</dcmn>	and give indication to the user of this condition either on the serial line with an unsolicited code or on a dedicated GPIO by rising it.	
	Parameters:	
	<mode></mode> - behaviour mode of the Jammed Detect & Report 0 - disables Jammed Detect & Report (factory default) 1 - enables the Jammed Detect; the Jammed condition is reported on pin GPI02/JDR GPI02/JDR Low - Normal Operating Condition	
	 GPI02/JDR High - Jammed Condition. 2 - enables the Jammed Detect; the Jammed condition is reported with a single unsolicited result code on serial line, in the format: 	
	#JDR: <status> where: <status></status></status>	
	JAMMED - Jammed condition detected OPERATIVE - Normal Operating condition restored. This code will be	
	 shown only after a jammed condition has occurred. 3 - enables the Jammed Detect; the MODULE will make both the actions as for <mode>=1 and <mode>=2.</mode></mode> 	
	4 - enables the Jammed Detect; the Jammed condition is reported with an unsolicited code every 3s on serial line, in the format:	
	#JDR: <status></status>	
	where:	
	<status></status>	
	JAMMED - Jammed condition detected	
	OPERATIVE - Normal Operating condition restored. This code will be	
	shown only after a jammed condition has occurred.

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

3.5.7.11. Easy Script® Extension - Python²⁷ Interpreter, AT Commands

3.5.7.11.1. Write Script - #WSCRIPT

#WSCRIPT - Write So	ript	SELINT 0 / 1	
AT#WSCRIPT=	Execution command causes the MODULE to store a file in	the Easy Script®	
<script_name>,</script_name>	related NVM, naming it <script_name></script_name>		
<size></size>			
[, <hidden>]</hidden>	The file should be sent using RAW ASCII file transfer.		
	It is important to set properly the port settings. In particular:		
	Flow control: hardware.		
	Baud rate: 115200 bps		
	Parameters:		
	<pre><script_name> - name of the file in NVM, string type (max 16 chars, case sensitive).</script_name></pre>		
	<size> - file size in bytes</size>		
	<hidden> - file hidden attribute</hidden>		
	0 - file content is readable with #RSCRIPT (default).		
	1 - file content is hidden, #RSCRIPT command will repor	rt empty file.	
	The device shall prompt a three character sequence

#WSCRIPT - Write S	cript SELINT 2
	<pre><script_name> - name of the file in NVM, string type (max 16 chars, case sensitive). <size> - file size in bytes</size></script_name></pre>
	<hidden> - file hidden attribute 0 - file content is readable with #RSCRIPT (default). 1 - file content is hidden, #RSCRIPT command will report empty file.</hidden>
	The device shall prompt a five character sequence <cr><lf><greater_than><greater_than><greater_than> (IRA 13, 10, 62, 62, 62) after command line is terminated with <cr>; after that a file can be entered from TE, sized <size> bytes.</size></cr></greater_than></greater_than></greater_than></lf></cr>
	The operations completes when all the bytes are received.
	If writing ends successfully, the response is OK ; otherwise an error code is reported.
	Note: the file name should be passed between quotes; every textual script file must have .py extension, whilst every pre-compiled executable script file must have .pyo extension; file names are case sensitive.
	Note: when sending the script be sure that the line terminator is <cr><lf></lf></cr> and that your terminal program does not change it.
	Note: with the hidden attribute it is possible to protect your files from being viewed and copied, only the file name can be viewed, its content is hidden even if the file is still being run correctly. It's your care to maintain knowledge on what the file contains.
AT#WSCRIPT=?	Test command returns OK result code.
Example	AT#WSCRIPT="First.py", 54,0 >>> here receive the prompt; then type or send the textual script, sized 54 bytes OK
	Textual script has been stored
Note	It's recommended to use the extension .py only for textual script files and the extension .pyo only for pre-compiled executable script files.

3.5.7.11.2. Select Active Script - #ESCRIPT

80000ST10025a Rev. 10 - 2011-02-17

#ESCRIPT - Select /	Active Script SELINT 0 / 1
<pre>#ESCRIPT - Select / AT#ESCRIPT[= [<script_name>]]</script_name></pre>	Active Script SELINTU/1 Set command selects either a) the name of the textual script file that will be compiled and executed by the Easy Script® compiler at startup according to last #STARTMODESCR setting, or b) the name of the pre-compiled executable file that will be executed a startup according to last #STARTMODESCR setting. We call this file (either textual or pre-compiled) the current script. Parameter: <script_name> - file name, string type (max 16 chars, case sensitive). Note: all textual script files must have .py extension; all pre-compiled executable files must have .pyo extension. Note: <script_name> must match to the name of a file written by #WSCRIPT in order to have it run. Note: the command does not check whether a textual script named <script_name> does exist or not in the Easy Script® related NVM. If the file <script_name> is not present at startup then the compiler will not</script_name></script_name></script_name></script_name>
	 execute. Note: issuing AT#ESCRIPT<cr> is the same as issuing the Read command.</cr> Note: issuing AT#ESCRIPT=<cr> is the same as issuing the command AT#ESCRIPT=""<cr>.</cr></cr> Read command reports as a quoted string the file name of the current
AT#ESCRIPT?	script.
AT#ESCRIPT=?	Test command returns OK result code.

#ESCRIPT - Select A	#ESCRIPT - Select Active Script SELINT 2	
AT#ESCRIPT=	Set command selects either	
[<script_name>]</script_name>	 c) the name of the textual script file that will be compiler at startup accord #STARTMODESCR setting, or d) the name of the pre-compiled executable file to startup according to last #STARTMODESCR s 	ding to last hat will be executed at etting.

80000ST10025a Rev. 10 - 2011-02-17

#ESCRIPT - Select A	ctive Script	SELINT 2
	Parameter:	
	<script_name> - file name, string type (max 16 chars, case</script_name>	e sensitive).
	Note: all textual script files must have .py extension; all pr executable files must have .pyo extension.	e-compiled
	Note: <script_name> must match to the name of a file written by #WSCRIPT in order to have it run.</script_name>	
	Note: the command does not check whether a textual scrip <script_name> does exist or not in the Easy Script® relate <script_name> is not present at startup then the compiler</script_name></script_name>	ed NVM. If the file
AT#ESCRIPT?	Read command reports as a quoted string the file name of	the current
	script.	
AT#ESCRIPT=?	Test command returns OK result code.	

3.5.7.11.3. Script Execution Start Mode - #STARTMODESCR

#STARTMODESCR - Script	Execution Start Mode	SELINT 0 / 1
AT#STARTMODESCR[=	Set command sets the current script (see #ESCRIP	T) execution start
<script_start_mode></script_start_mode>	mode.	
[, <script_start_to>]]</script_start_to>		
	Parameter:	
	<script_start_mode> - currente script execution s</script_start_mode>	
	0 - current script will be executed at startup only if	
	found Low (that is: COM is not open on a PC), othe	-
	Script® interpreter will not execute and the MOD	
	normally answering only to AT commands on the	serial port
	(factory default).	
	1 - current script will be executed at startup only if the user does not	
	send any AT command on the serial port for the ti	
	<pre>specified in <script_start_to> parameter, otherwise the Easy</script_start_to></pre>	
	Script® interpreter will not execute and the MODULE will behave	
	normally answering only to AT commands on the	serial port. The
	DTR line is not tested.	
	2 - current script will be executed at startup in any	
	and if the user does not send any AT command or	
	have no influence on script execution. But AT com	
	will be available on serial port ASCO and connected	
	parser instance. See "Easy Script in Python" docu details on this execution start mode.	intent for further
	uetails on this execution start mode.	

80000ST10025a Rev. 10 - 2011-02-17

#STARTMODESCR - Scrip	t Execution Start Mode	SELINT 0 / 1
	<pre><script_start_to> - current script start time-out; 1060 - time interval in seconds; this parameter is u parameter <script_start_mode> is set to 1; time for an AT command on the serial port to script execution start. If the user does not se command on the serial port for the time spe- parameter active script will not be executed Note: issuing AT#STARTMODESCR<cr> is the sam</cr></script_start_mode></script_start_to></pre>	it is the waiting o disable active and any AT cified in this (default is 10).
AT#STARTMODESCR?	Read command.Read command reports the current script start mode and the currentscript start time-out, in the format:	
	#STARTMODESCR= <script_start_mode>,<script_< th=""><th>start_timeout></th></script_<></script_start_mode>	start_timeout>
AT#STARTMODESCR=?	Test command returns the range of available values <pre><script_start_mode> and <script_start_timeout>,</script_start_timeout></script_start_mode></pre>	for parameters
	#STARTMODESCR: (0-2),(10-60)	

#STARTMODESCR - Script Execution Start Mode SELINT 2		
AT#STARTMODESCR=	Set command sets the current script (see #ESCRIPT) execution start	
<script_start_mode></script_start_mode>	mode.	
[, <script_start_to>]</script_start_to>		
	Parameter:	
	<script_start_mode> - currente script execution start mode 0 - current script will be executed at startup only if the DTR line is found Low (that is: COM is not open on a PC), otherwise the Easy Script® interpreter will not execute and the MODULE will behave normally answering only to AT commands on the serial port (factory default). 1 - current script will be executed at startup only if the user does not send any AT command on the serial port for the time interval specified in <script_start_to> parameter, otherwise the Easy Script® interpreter will not execute and the MODULE will behave normally answering only to AT commands on the serial port. The DTR line is not tested. 2 - current script will be executed at startup in any case. DTR line and if the user does not send any AT command on the serial port have no influence on script execution. But AT command interface will be available on serial port ASCO and connected to third AT</script_start_to></script_start_mode>

#STARTMODESCR - Script	t Execution Start Mode SELIN	<mark>Г 2</mark>	
	parser instance. See "Easy Script in Python" document for fur	ther	
	details on this execution start mode.		
	<script_start_to> - current script start time-out;</script_start_to>		
	1060 - time interval in seconds; this parameter is used only if		
	parameter <script_start_mode> is set to 1; it is the waiti</script_start_mode>	•	
	time for an AT command on the serial port to disable active		
	script execution start. If the user does not send any AT		
	command on the serial port for the time specified in this		
	parameter active script will not be executed (default is 10		
AT#STARTMODESCR?	Read command reports the current script start mode and the cu	rrent	
	script start time-out, in the format:		
	#STARTMODESCR= <script_start_mode>,<script_start_timeou< th=""><th>ut></th></script_start_timeou<></script_start_mode>	ut>	
AT#STARTMODESCR=?	Test command returns the range of available values for parameter	ers	
	<pre>script_start_mode> and <script_start_timeout>, in the format</script_start_timeout></pre>	:	
	#STARTMODESCR: (0-2),(10-60)		

3.5.7.11.4. Execute Active Script - #EXECSCR

#EXECSCR - Execute	Active Script	SELINT 0 / 1
AT#EXECSCR	Execution command causes the current script (see #ESCRIPT) execution	
	not at startup.	
	This command is useful when the execution at startup has been blocked	
	deliberately and the user wants to control execution start.	
AT#EXECSCR?	KECSCR? Read command has the same behaviour as execution command	
AT#EXECSCR=?	Test command returns OK result code.	

#EXECSCR - Execute	Active Script	SELINT 2
AT#EXECSCR	Execution command causes the current script (see #ESC	RIPT) execution
	not at startup.	
	This command is useful when the execution at startup has	been blocked
	deliberately and the user wants to control execution start.	
AT#EXECSCR=?	Test command returns OK result code.	

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

3.5.7.11.5. Read Script - #RSCRIPT

#RSCRIPT - Read Sc	ript	SELINT 0 / 1	
AT#RSCRIPT=	Execution command reports the content of file <script_na< th=""><th>me>.</th></script_na<>	me>.	
<script_name></script_name>			
	Parameter:		
	<script_name> - file name, string type (max 16 chars, case sensitive).</script_name>		
	The device shall prompt a three character sequence		
	<less_than><less_than><less_than></less_than></less_than></less_than>		
	(IRA 60, 60, 60)		
	followed by the file content.		
	Note: if the file <script_name></script_name> was saved with the hidden attribute, then an		
	empty file is reported with the OK result code.		
	Note: If the file <script_name></script_name> is not present an error cod	le is reported.	
AT#RSCRIPT=?	Test command returns OK result code.	·	
Example	AT#RSCRIPT="First.py "		
	hereafter receive the prompt: depending on your editor se	ttings it's possible	
	that the prompt overrides the above line; then the script is	s displayed,	
	immediately after the prompt		
	<< <import mdm<="" td=""><th></th></import>		
	MDM.send('AT\r',10) Ans=MDM.receive(20)		
	OK		

#RSCRIPT - Read	Script	SELINT 2
AT#RSCRIPT= Execution command reports the content of file <script_name>.</script_name>		ript_name>.
[<script_name>]</script_name>		
	Parameter:	
	<pre><script_name> - file name, string type (max 16 cha</script_name></pre>	rs, case sensitive).
	The device shall prompt a five character sequence	
	<cr><lf><less_than><less_than><less_than></less_than></less_than></less_than></lf></cr>	
	(IRA 13, 10, 60, 60, 60)	
	followed by the file content.	
	Note: if the file <script_name></script_name> was saved with the empty file is reported with the OK result code.	hidden attribute, then an
	Note: If the file <script_name></script_name> is not present an er	ror code is reported.
AT#RSCRIPT=?	Test command returns OK result code.	

80000ST10025a Rev. 10 - 2011-02-17

#RSCRIPT - Read Script SELINT		SELINT 2
Example	AT#RSCRIPT="First.py " hereafter receive the prompt; then the script is displayed the prompt << <import mdm<br="">MDM.send('AT\r',10) Ans=MDM.receive(20) OK</import>	l, immediately after

3.5.7.11.6. List Script Names - #LSCRIPT

#LSCRIPT - List Scri	#LSCRIPT - List Script Names SELINT 0 / 1			
AT#LSCRIPT	Execution command reports either the list of file names fo currently stored in the Easy Script® related NVM and the a NVM memory in the format: [#LSCRIPT: <script_name1> <size1> [<cr><lf><cr><lf>#LSCRIPT: <script_name<i>n> <size7 <cr><lf><cr><lf>#LSCRIPT: free bytes: <free_nvm> where: <script-name<i>n> - file name, quoted string type (max 16 ch sensitive) <size<i>n> - size of script in bytes</size<i></script-name<i></free_nvm></lf></cr></lf></cr></size7 </script_name<i></lf></cr></lf></cr></size1></script_name1>	available free 7>]]		
	<pre><free_nvm> - size of available NVM memory in bytes</free_nvm></pre>			
AT#LSCRIPT?	Read command has the same behavior of Execution comm	and.		
Example	AT#LSCRIPT #LSCRIPT: First.py 51 #LSCRIPT: Second.py 178 #LSCRIPT: Third.py 95 #LSCRIPT: free bytes: 20000 OK			

#LSCRIPT - List Script Names SELINT 2		SELINT 2
AT#LSCRIPT	LSCRIPT Execution command reports either the list of file names for the files currently stored in the Easy Script® related NVM and the available NVM memory in the format:	
	[#LSCRIPT: <script_name1>,<size1> [<cr><lf>#LSCRIPT: <script_name<i>n>,<size<i>n>]] <cr><lf>#LSCRIPT: free bytes: <free_nvm></free_nvm></lf></cr></size<i></script_name<i></lf></cr></size1></script_name1>	

80000ST10025a Rev. 10 - 2011-02-17

#LSCRIPT - List Scri	pt Names	SELINT 2
	where: < script-name <i>n</i> > - file name, quoted string type (max 16 ch sensitive) < size <i>n</i> > - size of script in bytes < free_NVM > - size of available NVM memory in bytes	ars, case
AT#LSCRIPT=?	Test command returns OK result code.	
Example	AT#LSCRIPT #LSCRIPT: "First.py",51 #LSCRIPT: "Second.py",178 #LSCRIPT: "Third.py",95 #LSCRIPT: free bytes: 20000	
	ОК	

#LCSCRIPT - List Sc	ript Names SELINT 2
#LCSCRIPT - List Sc AT#LCSCRIPT	ript NamesSELINT 2Execution command reports either the list of file names for the files currently stored in the Easy Script® related NVM, adding CRC16 information, and the available free NVM memory in the format:[#LCSCRIPT: <script_name1>, <size1>[, <crc1>] [<cr><lf>#LCSCRIPT: <script_namen>, <sizen>[, <crcn>]]]<cr><lf>#LCSCRIPT: free bytes: <free_nvm>where: <script-namen> - file name, quoted string type (max 16 chars, case sensitive)<sizen> - size of script in bytes <crcn> - CRC16 poly (x^16+x^12+x^5+1) of script in hex format <free_nvm> - size of available NVM memory in bytesNote: CRC16 is calculated using the standard CRC16-CCITT x^16+x^12+x^5+1 polynomial (0x1021 representation) with initial value FFFF.Note: if one file currently stored in NVM is in use than CRC16 cannot be calculated and execution command does not report <crcn> for that file. This is always true if command is executed by a Python script because at least the file pointed by #ESCRIPT is in use.</crcn></free_nvm></crcn></sizen></script-namen></br></free_nvm></lf></cr></crcn></sizen></script_namen></lf></cr></crc1></size1></script_name1>
AT#LCSCRIPT=	Execution command reports size and CPC16 information of file
<pre><script_name></script_name></pre>	Execution command reports size and CRC16 information of file <script_name> in the format:</script_name>
	[#LCSCRIPT: <script_name>,<size>[,<crc>]]</crc></size></script_name>

80000ST10025a Rev. 10 - 2011-02-17

#LCSCRIPT - List Sci	ript Names	SELINT 2
#LCSCRIPT - List Scr AT#LCSCRIPT=? Example	<pre>ript Names where: <script-name> - file name, quoted string type (max 16 cha</script-name></pre>	ars, case mat e sensitive). T initial value e calculated and
	AT#LCSCRIPT="Second.py" #LCSCRIPT: "Second.py",178,A034 OK If file Third.py is already in use. AT#LCSCRIPT #LCSCRIPT: "First.py",51,8FD6 #LCSCRIPT: "Second.py",178,A034 #LCSCRIPT: "Third.py",120 #LCSCRIPT: free bytes: 20000 OK	

3.5.7.11.7. Delete Script - #DSCRIPT

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

80000ST10025a Rev. 10 - 2011-02-17

#DSCRIPT - Delete S	Script SELINT 0 / 1
AT#DSCRIPT= <script_name></script_name>	Execution command deletes a file from Easy Script® related NVM memory.
	Parameter:
	<script_name> - name of the file to delete, string type (max 16 chars, case sensitive)</script_name>
	Note: if the file <script_name></script_name> is not present an error code is reported.
AT#DSCRIPT=?	Test command returns OK result code.
Example	AT#DSCRIPT="Third.py"
	ОК

#DSCRIPT - Delete Script SELINT 2		
AT#DSCRIPT= [<script_name>]</script_name>	Execution command deletes a file from Easy Script® related NVM memory.	
	Parameter:	
	<script_name> - name of the file to delete, string type (max 16 chars, case sensitive)</script_name>	
	Note: if the file <script_name></script_name> is not present an error code is reported.	
AT#DSCRIPT=?	Test command returns OK result code.	
Example	AT#DSCRIPT="Third.py"	
	ОК	

3.5.7.11.8. Reboot - #REBOOT

#REBOOT - Reboot		SELINT 0 / 1
AT#REBOOT	Execution command reboots immediately the unit.	
	It can be used to reboot the system after a remote update or order to have the new one running.	of the script in
	Note: if AT#REBOOT follows an AT command that stores so in NVM, it is recommended to insert a delay of at least 5 se issue AT#REBOOT, to permit the complete NVM storing	
AT#REB00T?	Read command has the same behaviour of Execution comr	nand.
AT#REB00T=?	Test command returns OK result code.	

80000ST10025a Rev. 10 - 2011-02-17

#REBOOT - Reboot		SELINT 0 / 1
Example	AT#REBOOT OK Module Reboots	

#REBOOT - Reboot	SELINT 2	
AT#REBOOT	Execution command reboots immediately the unit.	
	It can be used to reboot the system after a remote update of the script in order to have the new one running.	
	Note: if AT#REB00T follows an AT command that stores some parameters in NVM, it is recommended to insert a delay of at least 5 seconds before to issue AT#REB00T, to permit the complete NVM storing	
	Note: AT#REB00T is an obsolete AT command; please refer to	
	AT#ENHRST to perform a module reboot	
AT#REB00T=?	Test command returns OK result code.	
Example	AT#REBOOT OK	
	Module Reboots	

3.5.7.11.9. CMUX Interface Enable - #CMUXSCR

#CMUXSCR - CMUX I	nterface Enable	SELINT 2
AT#CMUXSCR=	Set command enables/disables the 3GPP TS 27.010 multiplexing protocol	
<enable>,[<rate>]</rate></enable>	control channel (see +CMUX) at startup before the current script (see #ESCRIPT) execution and specifies the DTE speed at which the device sends and receives CMUX frames (used to fix the DTE-DCE interface	
	speed).	
	Parameters:	
	<enable> - enables/disables CMUX interface at startup.</enable>	
	0 - it disables CMUX interface at startup, before current script execution (factory default)	
	1 - it enables CMUX interface at startup, before current s	cript execution
	<rate></rate>	

80000ST10025a Rev. 10 – 2011-02-17

#CMUXSCR - CMUX	Interface Enable SELINT 2	
	300	
	1200	
	2400	
	4800	
	9600	
	19200	
	38400	
	57600	
	115200 (default)	
	If <rate></rate> is omitted the value is unchanged	
	<enable> and <rate> values are saved in NVM</rate></enable>	
AT#CMUXSCR ?	Read command returns the current value of #CMUXSCR parameters in	ı the
	format:	
	#CMUXSCR: <enable>,<rate></rate></enable>	
AT#CMUXSCR =?	Test command reports the range for the parameters <enable> and <ra< th=""><th>ite></th></ra<></enable>	ite>

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

3.5.7.12. GPS AT Commands Set

3.5.7.12.1. GPS Controller Power Management - \$GPSP

\$GPSP - GPS Contro	iller Power Management	SELINT 0 / 1 / 2
AT\$GPSP= <status></status>	Set command allows to manage power-up or down of the GPS controller	
	Parameter:	
	<status></status>	
	0 - GPS controller is powered down	
	1 - GPS controller is powered up (default)	
	Note: for the GPS product (GE863-GPS): if the GPS controll down while VAUX pin is enabled they'll both also be also p	•
	Note: the current setting is stored through \$GPSSAV	
AT\$GPSP?	Read command reports the current value of the <status></status> p the format:	barameter, in
	\$GPSP: <status></status>	
AT\$GPSP=?	Test command reports the range of supported values for p	arameter
	<status></status>	
Example	AT\$GPSP=0 OK	

3.5.7.12.2. GPS Reset - \$GPSR

<mark>\$GPSR - GPS Reset</mark>		SELINT 0 / 1 / 2
AT\$GPSR=	Execution command allows to reset the GPS controller.	
<reset_type></reset_type>		
	Parameter:	
	<reset_type></reset_type>	
	 0 - Hardware reset: the GPS receiver is reset and restarts values stored in the internal memory of the GPS receiven 1 - Coldstart (No Almanac, No Ephemeris): this option clears currently stored in the internal memory of the GPS reposition, almanac, ephemeris, and time. The stored cloars retained. It is available in controlled mode only. 2 - Warmstart (No ephemeris): this option clears all initia the GPS receiver and subsequently reloads the data the displayed in the Receiver Initialization Setup screen. The retained but the ephemeris is cleared. It is available in only. 	er. ears all data that eceiver including ock drift however, lization data in at is currently ne almanac is

80000ST10025a Rev. 10 - 2011-02-17

\$GPSR - GPS Reset	SELINT 0 / 1 / 2
	3 - Hotstart (with stored Almanac and Ephemeris): the GPS receiver restarts by using the values stored in the internal memory of the GPS receiver; validated ephemeris and almanac. It is available in controlled mode only.
AT\$GPSR=?	Test command reports the range of supported values for parameter < reset_type>
Example	AT\$GPSR=0 OK

3.5.7.12.3. GPS Device Type Set - \$GPSD

\$GPSD - GPS Device	Type Set	SELINT 0 / 1 / 2
AT\$GPSD= <device_type></device_type>	Set command defines which GPS device is connected to the module. It dedicates the Serial port #1 of the module (TRACE) to receive the GPS strings from the GPS module.	
	Parameter: <device type=""> 0 - none; the serial port is not connected to GPS device ar</device>	nd available for
	standard use 1 - currently has no meaning, maintained for backward compatibility 2 - serial port connected to GPS serial port: controlled mode (default) 3 - currently has no meaning, maintained for backward compatibility	
	Note: In case of GM862-GPS <device type=""></device> has always val any other value it will give ERROR.	ue 2, if you set
	Note: the current setting is stored through \$GPSSAV	
AT\$GPSD?	Read command reports the current value of <device_type< b=""> the format:</device_type<>	> parameter, in
	\$GPSD: <device_type></device_type>	
AT\$GPSD=?	Test command reports the range of supported values for p <device_type></device_type>	parameter
Example	AT\$GPSD=0 OK	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

80000ST10025a Rev. 10 - 2011-02-17

3.5.7.12.4. GPS Software Version - \$GPSSW

\$GPSSW - GPS Software Version SELINT 0 / 1		SELINT 0 / 1 / 2
AT\$GPSSW	Execution command provides GPS Module software version in the format:	
	\$GPSSW: <sw version=""></sw>	
AT\$GPSSW?	Read command has the same meaning as the Execution command	
AT\$GPSSW=?	Test command returns the OK result code	
Example	AT\$GPSSW \$GPSSW: GSW3.1.1_3.1.00.07-C23P1.00 OK	

3.5.7.12.5. GPS Antenna Type Definition - \$GPSAT

\$GPSAT - GPS Anter	nna Type Definition	SELINT 0 / 1 / 2
AT\$GPSAT= <type></type>	Set command selects the GPS antenna used.	
	Parameter:	
	<type> 0 - GPS Antenna not power supplied by the module</type>	
	1 - GPS Antenna power supplied by the module (default)	
	Note: if current <type></type> is 0, either \$GPSAV and \$GPSAI ha	ve no meaning.
	Note: the current setting is stored through \$GPSSAV	
AT\$GPSAT?	Read command returns the currently used antenna, in the	format:
	\$GPSAT: <type></type>	
AT\$GPSAT=?	Test command reports the range of supported values for pa	arameter <type></type>
Example	AT\$GPSAT=1 OK	
Note	Refer to the HW user guide for the compatible GPS antenna	as

3.5.7.12.6. GPS Antenna Supply Voltage Readout - \$GPSAV

\$GPSAV - GPS An	tenna Supply Voltage Readout	SELINT 0 / 1 / 2	
AT\$GPSAV	Execution command returns the measured GPS antenna's supply voltage in mV		
AT\$GPSAV?	Read command has the same meaning as the Execution command		
AT\$GPSAV=?	Test command returns the OK result code	Test command returns the OK result code	
Example	AT\$GPSAV \$GPSAV:3800 OK		
Note	It has meaning only if current \$GPSAT setting is not 0		

80000ST10025a Rev. 10 – 2011-02-17

3.5.7.12.7. GPS Antenna Current Readout - \$GPSAI

\$GPSAI - GPS Ant	tenna Current Readout SELINT 0 / 1 / 2
AT\$GPSAI	Execution command reports the GPS antenna's current consumption in the format:
	\$GPSAI: <value>[,<status>]</status></value>
	where:
	<value> - the measured current in mA</value>
	<status></status>
	0 - GPS antenna OK
	1 - GPS antenna consumption out of the limits
	Note: the output <status></status> is available only if the antenna protection is activated (see \$GPSAP)
AT\$GPSAI?	Read command has the same meaning as the Execution command
AT\$GPSAI=?	Test command returns the OK result code
Example	AT\$GPSAI? \$GPSAI:040,0 OK
Note	It has meaning only if current \$GPSAT setting is not 0

3.5.7.12.8. GPS Antenna Protection - \$GPSAP

\$GPSAP - GPS Anten	na Protection	5 <mark>ELINT 0 / 1 / 2</mark>
AT\$GPSAP= <set>[,< value>]</set>	T\$GPSAP= <set>[,< Set command allows to activate an automatic protection in case of I current consumption of GPS antenna. The protection disables the G antenna supply voltage.</set>	
	Parameters: <set> 0 - deactivate current antenna protection (default) 1 - activate current antenna protection <value> - the antenna current limit value in mA 0200</value></set>	
	The parameter <value></value> has meaning only if parameter <set< b=""> it is not accepted.</set<>	>=1, otherwise
	Note: the new setting is stored through \$GPSSAV	
AT\$GPSAP?	Read command reports the current activation status of anter protection and the current antenna limit value, in the format	

80000ST10025a Rev. 10 - 2011-02-17

<mark>\$GPSAP - GPS Ar</mark>	ntenna Protection SELINT 0 / 1 / 2
	\$GPSAP: <set>,<value></value></set>
AT\$GPSAP=?	Test command reports the range of supported values for parameters <set></set>
Example	and <value> AT\$GPSAP=0 OK</value>
	<i>Note : no SW control on antenna status (HW current limitation only)</i>
	AT\$GPSAP=1,25 OK
	activate current antenna protection with related current limit
	AT\$GPSAP? \$GPSAP:1,50 OK
	Antenna protection activated with 50mA limit
Note	The module is already provided of an Hardware protection for the high current consumption that is automatically activated if the consumption exceeds 50mA

3.5.7.12.9. GPS NMEA Serial Port Speed - \$GPSS

\$GPSS - GPS Serial	Port Speed	SELINT 0 / 1 / 2
AT\$GPSS= <speed></speed>	Set command allows to select the speed of the NMEA seria	al port.
	Parameter:	
	<speed></speed>	
	4800 - (default)	
	9600	
	19200	
	38400	
	57600	
	Note: the new setting is stored through \$GPSSAV	
AT\$GPSS?	Read command returns the current serial ports speed in th	ne format:
	\$GPSS: <speed></speed>	
AT\$GPSS=?	Test command returns the available range for <speed></speed>	

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

3.5.7.12.10. Unsolicited NMEA Data Configuration - \$GPSNMUN

\$GPSNMUN - Unsol	icited NMEA Data Configuration SELINT 0 / 1 / 2	2
AT\$GPSNMUN=	Set command permits to activate an Unsolicited streaming of GPS data (in	
<enable></enable>	NMEA format) through the standard GSM serial port and defines which	
[, <gga>,<gll>,</gll></gga>	NMEA sentences will be available	
<gsa>,<gsv>,</gsv></gsa>		
<rmc>,<vtg>]</vtg></rmc>	Parameters:	
	<enable></enable>	
	0 - NMEA data stream de-activated (default)	
	1 - NMEA data stream activated with the following unsolicited response	
	syntax:	
	\$GPSNMUN: <cr><nmea sentence=""><cr></cr></nmea></cr>	
	2 - NMEA data stream activated with the following unsolicited response	
	syntax:	
	<nmea sentence=""><cr></cr></nmea>	
	3 - dedicated NMEA data stream; it is not possible to send AT commands;	
	with the escape sequence '+++' the user can return to command mode	
	<gga> - Global Positioning System Fix Data</gga>	
	0 - disable (default)	
	1 - enable	
	GLL> - Geographical Position - Latitude/Longitude	
	0 - disable (default)	
	1 - enable	
	<gsa> - GPS DOP and Active Satellites</gsa>	
	0 - disable (default)	
	1 - enable	
	<gsv> - GPS Satellites in View</gsv>	
	0 - disable (default)	
	1 - enable	
	<rmc> - recommended Minimum Specific GPS Data</rmc>	
	0 - disable (default)	
	1 - enable	
	VTG> - Course Over Ground and Ground Speed	
	0 - disable (default)	
	1 - enable	_
AT\$GPSNMUN?	Read command returns whether the unsolicited GPS NMEA data streaming	,
	is currently enabled or not, along with the NMEA sentences availability	
	status, in the format:	
	 \$GPSNMUN: <enable>,<gga>,<gll>,<gsa>,<gsv>,<rmc>,<vtg></vtg></rmc></gsv></gsa></gll></gga></enable>	
AT\$GPSNMUN=?	Test command returns the supported range of values for parameters	\neg
	<pre><enable>, <gga>, <gll>, <gsa>, <gsv>, <rmc>, <vtg></vtg></rmc></gsv></gsa></gll></gga></enable></pre>	

80000ST10025a Rev. 10 - 2011-02-17

<mark>\$GPSNMUN - Unsoli</mark>	cited NMEA Data Configuration	SELINT 0 / 1 / 2
Example	AT\$GPSNMUN=1,0,0,1,0,0,0 OK These sets the GSA as available sentence in the unsolicited	d message
	AT\$GPSNMUN=0 OK <i>Turn-off the unsolicited mode</i>	-
	AT\$GPSNMUN? \$GPSNMUN: 1,0,0,1,0,0,0 OK <i>Give the current frame selected (GSA)</i>	
	The unsolicited message will be: \$GPSNMUN: \$GPGSA, A, 3, 23, 20, 24, 07, 13, 04, 02, , 2.4, 1.6, 1.8*3C	
Reference	NMEA 01803 Specifications	
Note	The command is available in "Controlled Mode" only	
	The available NMEA Sentences are depending on the GPS	receiver used
	In GE863-GPS and GM862-GPS the fields PDOP and VDOP of Use NMEA serial port instead if full DOP info are needed	are not available

3.5.7.12.11. Get Acquired Position - \$GPSACP

\$GPSACP - Get Acqu	ired Position SELINT 0 / 1 / 2
AT\$GPSACP	Execution command returns information about the last GPS position in the format:
	\$GPSACP: <utc>,<latitude>,<longitude>,<hdop>,<altitude>,<fix>,<cog>,<spkm>,<spkn>,<date>,<nsat></nsat></date></spkn></spkm></cog></fix></altitude></hdop></longitude></latitude></utc>
	where: <utc></utc> - UTC time (hhmmss.sss) referred to GGA sentence <latitude></latitude> - format is ddmm.mmm N/S (referred to GGA sentence) where: dd - degrees 0090 mm.mmmm - minutes 00.000059.9999 N/S: North / South
	<longitude> - format is dddmm.mmmm E/W (referred to GGA sentence) where:</longitude>

3.5.7.12.12. Direct Access to GPS Module - \$GPSCON

\$GPSCON - Direct Ad	ccess to GPS Module	SELINT 0 / 1 / 2
AT\$GPSCON	GPSCON Execution command allows to set the GSM baseband in transparent mo order to have a direct access to the serial port of the GPS module. The module will transfer directly the received data to the GPS module, with checking or elaborating them. Note: the command is usable only in "controlled mode".	
	Note: in case of an incoming call from GSM, this will be vis pin of serial port.	ible on the RING
	Note: the escape sequence is "+++"	
	Note: the Serial Port Speed can be maximum 38400 bps	
AT\$GPSCON=?	Test command returns the OK result code	

3.5.7.12.13. Set The GPS Module In Programming Mode - \$GPSPRG

\$GPSPRG - Set The (\$GPSPRG - Set The GPS Module In Programming Mode SELINT 0 / 1 /		
AT\$GPSPRG	Execution command allows to switch on the GPS part in BOOT mode and set the GSM processor in Transparent Mode, in order to permit the re- programming of th GPS flash memory. Note: the escape sequence is "+++" Note: it is possible to issue \$GPSPRG only if the Serial Port Speed is fixed		
	38400 bps		
AT\$GPSPRG?	Read command has the same effect as Execution comman	d.	
AT\$GPSPRG=?	Test command returns the OK result code		

3.5.7.12.14. Set The GPS Module In Power Saving Mode - \$GPSPS

<mark>\$GPSPS - Set The G</mark>	PS Module In Power Saving Mode	SELINT 0 / 1
AT\$GPSPS[= <mode< th=""><th colspan="2">Set command allows to set the GPS module in Power saving mode.</th></mode<>	Set command allows to set the GPS module in Power saving mode.	
[, <ptf_period>]]</ptf_period>

Note	Available in "controlled mode" only	

3.5.7.12.15. Wake Up GPS From Power Saving Mode - \$GPSWK

\$GPSWK - Wake Up	3PS From Power Saving Mode SELINT 0 / 1 / 2	
AT\$GPSWK	Execution command allows to wake up the GPS module if set in sleeping mode due to power saving.	
	Note: if the GPS module is in tricklepower mode, it will start up, make the fix and then continue to work in power saving mode.	
	Note: if the GPS module is in push-to-fix mode, issuing \$GPSWK pemits to wake up it before the push to fix period; after the new fix the GPS module will return in push-to-fix mode with the same parameters.	
	Note: this command turn on the VAUX, so it could interfere with AT#VAUX command.	
AT\$GPSWK=?	Test command returns the OK result code	
Note	Available in "controlled mode" only	

3.5.7.12.16. Save GPS Parameters Configuration - \$GPSSAV

\$GPSSAV - Save GPS	Parameters Configuration	SELINT 0 / 1 / 2	
AT\$GPSSAV	Execution command stores the current GPS parameters in the NVM of the		
	device.		
AT\$GPSSAV=?	Test command returns the OK result code		
Example	AT\$GPSSAV		
•	OK		
Note	The module must be restarted to use the new configuration		

3.5.7.12.17. Restore To Default GPS Parameters - \$GPSRST

80000ST10025a Rev. 10 - 2011-02-17

\$GPSRST - Restore T	o Default GPS Parameters	SELINT 0 / 1 / 2
AT\$GPSRST	Execution command resets the GPS parameters to "Factory Default"	
	configuration and stores them in the NVM of the device.	
AT\$GPSRST=?	Test command returns the OK result code	
Example	AT\$GPSRST OK	
Note	The module must be restarted to use the new configuration	1

3.5.7.12.18. GPS Controller Disabling - \$GPSCMODE

\$GPSCMODE - GPS (Controller Disabled at Start-up With Charger Inserted SELINT 0 / 1 / 2	
AT\$GPSCM0DE= <n< th=""><th colspan="2">Execution command allows to keep off the GSP controller when the module</th></n<>	Execution command allows to keep off the GSP controller when the module	
>	is woken up by charger insertion.	
	The GPS controller can be turned on by AT\$GPSP=1.	
	Parameter:	
	<n></n>	
	0 – GPS controller on at start-up (factory default)	
	1 – GSP controller off at start-up with charger inserted	
	Note: the new setting is stored through \$GPSSAV	
AT\$GPSCMODE ?	Read command reports whether GPS controller is enabled or not when the	
	module is turned on by the charger insertion, in the format:	
	\$GPSCMODE : <n></n>	
AT\$GPSCMODE =?	reports the supported values for <n></n> parameter	

3.5.7.13. SAP AT Commands Set

3.5.7.13.1. Remote SIM Enable - #RSEN

#RSEN – Remote SI	<mark>4 Enable</mark>	SELINT 2
AT#RSEN= <mode> [,<sapformat> [,<role></role></sapformat></mode>	Set command is used to enable/disable the Remote SIM feature. The command returns ERROR if requested on a non multiplexed interface	
[, <muxch> [,<beacon> [,<scriptmode>]]]]]</scriptmode></beacon></muxch>	<pre>Parameter: <mode> 0 - disable 1 - enable</mode></pre>	
	<pre><sapformat> 1 - binary SAP (default) </sapformat></pre>	

80000ST10025a Rev. 10 - 2011-02-17

#RSEN – Remote SI	M Enable	SELINT 2
	0 - remote SIM Client (default)	
	• If the ME doesn't support the Easy Script Extension	<i>n</i> ® or
	 <scriptmode> is omitted or</scriptmode> 	
	• <scriptmode> is 0</scriptmode>	
	<pre><muxch> - MUX Channel Number; mandatory if <mode< pre=""></mode<></muxch></pre>	>=1
	13	
	<i>If the ME support the Easy Script Extension</i> ® and	
	<scriptmode> is 1</scriptmode>	
	<pre><muxch> - MDM interface number in scripts; mandator</muxch></pre>	y if
	<mode>=1</mode>	
	1 - MDM interface	
	2 - MDM2 interface	
	beacon> - retransmition timer of SAP Connection Reque	set
	0 - only one transmittion (default)	:51
	1100 - timer interval in seconds.	
	<pre>scriptmode> - script mode enable; setting this subparar</pre>	meter has a
	meaning only if the ME supports the Easy Scrip	
	Extension	
	0 - disable script mode (see subparameter <muxch></muxch>)	
	1 - enable script mode (see subparameter <muxch></muxch>)	
	Note: enabling the Remote SIM feature when the SIM is a	lready
	inserted causes the module to:	
	de-register from the actual network	
	de-initialize the current SIM.	
	Note: issuing the command on a not multiplexed interface	
	cause an ERROR to be raised in all the situations except w	when:
	• the ME supports the Easy Script Extension® and	
	 <scriptmode> is 1</scriptmode> 	
	Note: if the Remote SIM feature has been activated the SA	ΔP connection status
	is signalled with the following URC:	AI connection status
	#RSEN: <conn></conn>	
	where	
	<conn> - connection status</conn>	
	0 - disconnected	
	1 - connected

3.5.7.14. Telefonica OpenGate M2M AT Commands Set

For more detailed information about the AT commands dedicated for Telefonica Open Gate M2M protocol handling please consult the OpenGate M2M Protocol User Guide.

3.5.7.15. Audio Commands

These are not the only audio commands available. See par. 3.5.4.4.

3.5.7.15.1. Basic configuration

3.5.6.16.1.1. Change Audio Path - #CAP

#CAP - Change Audio	p Path	SELINT 0 / 1
AT#CAP[=[<n>]]</n>	Set command switches the active audio path depending on	parameter <n></n>
	Parameter:	
	<n> - audio path</n>	
	 0 - audio path follows the AXE input (factory default): if AXE is low, handsfree is enabled; if AXE is high, internal path is enabled 1 - enables handsfree external mic/ear audio path 2 - enables internal mic/ear audio path 	
	Note: The audio path are mutually exclusive, enabling other.	one disables the
	Note: when changing the audio path, the volume leve previously stored value for that audio path (see +CLVL).	vel is set at the
	Note: issuing AT#CAP<cr></cr> is the same as issuing the Rea	ad command.

80000ST10025a Rev. 10 - 2011-02-17

#CAP - Change Audi	<mark>o Path</mark>	SELINT 0 / 1
	Note: issuing AT#CAP= <cr> is the same as issuin AT#CAP=0<cr>.</cr></cr>	g the command
AT#CAP?	Read command reports the active audio path in the format	:
	#CAP: <n>.</n>	
AT#CAP=?	Test command reports the supported values for the param	eter <n></n> .

<mark>#CAP - Change A</mark>	udio Path SELI	NT2
AT#CAP=[<n>]</n>	 Set command switches the active audio path depending on parar Parameter: <n> - audio path</n> 0 - audio path follows the AXE input (factory default): if AXE is low, handsfree is enabled; if AXE is high, internal path is enabled 1 - enables handsfree external mic/ear audio path 2 - enables internal mic/ear audio path Note: The audio path are mutually exclusive, enabling one disable 	neter <n></n> es the
	Note: when changing the audio path, the volume level is set at th previously stored value for that audio path (see +CLVL).	е
AT#CAP?	Read command reports the active audio path in the format: #CAP: <n>.</n>	
AT#CAP=?	Test command reports the supported values for the parameter <	n>.

3.5.6.16.1.2. AXE Pin Reading - #AXE

#AXE - AXE Pir	n Reading SELINT 2
AT#AXE	Execution command causes the ME to return the current state of AXE pin in the format:
	#AXE: <state></state>
	where: <state></state>
	0 - Low 1 - High

page 568 of 604

80000ST10025a Rev. 10 – 2011-02-17

#AXE - AXE Pin Read	ing	SELINT 2
AT#AXE=?	Test command returns the OK result code.	
NOTE:	This command is not available for GE865 modules	

3.5.6.16.1.3. Select Ringer Sound - #SRS

#SRS - Select Ringe	<mark>r Sound</mark>	SELINT 0 / 1
AT#SRS[=	Set command sets the ringer sound.	
<n>,<tout>]</tout></n>		
	Parameters:	
	<n> - ringing tone</n>	
	0 - current ringing tone	
	1 <i>max</i> - ringing tone number, where <i>max</i> can be read b command AT#SRS=? .	y issuing the Test
	<tout> - ringing tone playing time-out in seconds.</tout>	
	0 - ringer is stopped (if present) and current ringer sound	
	160 - ringer sound playing for <tout> seconds and, if <n sound <n> is set as default ringer sound.</n></n </tout>	> > 0, ringer
	Note: when the command is issued with <n> > 0</n> and <tout< b=""> ringing tone is played for <tout></tout> seconds and stored as de</tout<>	
		laatt mignig tone.
	Note: if command is issued with <n> > 0</n> and <tout> = 0</tout> , th ringing is stopped (if present) and <n></n> ringing tone is set a	
	Note: if command is issued with <n> = 0</n> and <tout> > 0</tout> th ringing tone is played.	en the current
	Note: if both <n></n> and <tout></tout> are 0 then the default ringing current and ringing is stopped.	tone is set as
	Note: If all parameters are omitted then the behaviour o	f Set command is
	the same as Read command	
AT#SRS?	Read command reports current selected ringing and its st	atus in the form:
	#SRS: <n>,<status></status></n>	
	where:	
	<pre><n> - ringing tone number</n></pre>	
	1 <i>max</i>	
	<pre><status> - ringing status</status></pre>	
	0 - selected but not playing	
	1 - currently playing

#SRS - Select Ringer	· Sound	SELINT 0 / 1
AT#SRS=?	Test command reports the supported values for the pa	arameters <n></n> and
	<tout></tout>	

<mark>#SRS - Select Ri</mark>	nger Sound SELINT 2	
AT#SRS=	Set command sets the ringer sound.	
[<n>,<tout>]</tout></n>		
	Parameters:	
	<n> - ringing tone</n>	
	0 - current ringing tone	
	1 <i>max</i> - ringing tone number, where <i>max</i> can be read by issuing the Test command AT#SRS=? .	t
	<tout> - ringing tone playing timer in units of seconds.</tout>	
	0 - ringer is stopped (if present) and current ringer sound is set.	
	160 - ringer sound playing for <tout> seconds and, if <n> > 0, ringer sound <n> is set as default ringer sound.</n></n></tout>	
	Note: when the command is issued with <n> > 0</n> and <tout> > 0</tout> , the <n></n>	
	ringing tone is played for <tout></tout> seconds and stored as default ringing tor	۱e.
	Note: if command is issued with < n> > 0 and < tout> = 0 , the playing of the ringing is stopped (if present) and < n> ringing tone is set as current.	ļ
	Note: if command is issued with <n> = 0</n> and <tout> > 0</tout> then the current ringing tone is played for <tout></tout> seconds.	
	Note: if both <n></n> and <tout></tout> are 0 then the default ringing tone is set as current and ringing is stopped.	
	Note: If all parameters are omitted then the behaviour of Set command is	
	the same as Read command	
AT#SRS?	Read command reports current selected ringing and its status in the form	1:
	#SRS: <n>,<status></status></n>	
	where:	
	<n> - ringing tone number</n>	
	1 <i>max</i>	
	<status> - ringing status</status>	
	0 - selected but not playing	
	1 - currently playing	
AT#SRS=?	Test command reports the supported values for the parameters <n></n> and <tout></tout>	

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

3.5.6.16.1.4. Select Ringer Path - #SRP

$5.5.0.10.1.4. \text{Select Kinger Fall} = \pi SKF$		
#SRP - Select Ringe		<mark>SELINT 0 / 1</mark>
AT#SRP[=[<n>]]</n>	Set command selects the ringer path towards whom sendin and all signalling tones. Parameter: <n> - ringer path number 0 - sound output towards current selected audio pa command #CAP) 1 - sound output towards handsfree 2 - sound output towards handset 3 - sound output towards Buzzer Output pin GPI07</n>	ng ringer sounds
	Note: In order to use the Buzzer Output an external cir added to drive it properly from the GPI07 pin, furthermore direction must be set to Buzzer output (Alternate function) #GPIO . Note: issuing AT#SRP<cr></cr> is the same as issuing the Read Note: issuing AT#SRP=<cr></cr> is the same as issuing AT#SRP=0<cr></cr> .	e the GPI07 pin I; see command d command.
AT#SRP?	Read command reports the selected ringer path in the form	nat:
	#SRP: <n>.</n>	
AT#SRP=?	Test command reports the supported values for the parame	eter <n>.</n>
Example	AT#SRP=? #SRP: (0-3) OK AT#SRP=3 OK	

#SRP - Select Ringer	<mark>r Path</mark>	SELINT 2
AT#SRP=[<n>]</n>	Set command selects the ringer path towards whom sending ringer sou and all signalling tones.	
	Parameter: <n> - ringer path number 0 - sound output towards current selected audio path (see command #CAP) 1 - sound output towards handsfree</n>	2

80000ST10025a Rev. 10 - 2011-02-17

#SRP - Select Ringer	r Path	SELINT 2
	2 - sound output towards handset	
	3 - sound output towards Buzzer Output pin GPI07	
	Note: In order to use the Buzzer Output an external circuit added to drive it properly from the GPI07 pin, furthermore direction must be set to Buzzer output (Alternate function); #GPI0.	the GPI07 pin
AT#SRP?	Read command reports the selected ringer path in the forr	nat:
	#SRP: <n>.</n>

	Parameter: <level>: handset microphone input gain 07 - handset microphone gain (+6dB/step, factory defaul</level>	t = 0)
AT#HSMICG?	Read command returns the current handset microphone input gain, in the format: #HSMICG: <level></level>	
AT#HSMICG=?	Test command returns the supported range of values of pa	arameter <level></level> .

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

3.5.6.16.1.7. Handsfree Receiver Gain - #HFRECG

#HFRECG - Handsfre	e Receiver Gain	SELINT 2
AT#HFRECG=	Set command sets the handsfree analogue output gain	
<level></level>		
	Parameter:	
	<level>: handsfree analogue output gain</level>	
	06 - handsfree analogue output (-3dB/step, factory defai	ult = 0)
	Note: This parameter is saved in NVM issuing AT&W comn	nand.
AT#HFRECG?	Read command returns the current handsfree analog outp format:	ut gain, in the
	#HFRECG: <level></level>	
AT#HFRECG =?	Test command returns the supported range of values of pa <level>.</level>	arameter

3.5.6.16.1.8. Handset Receiver Gain - #HSRECG

#HSRECG - Handset	Receiver Gain	SELINT 2
AT#HSRECG=	Set command sets the handset analogue output gain	
<level></level>	Parameter: <level>: handset analogue output gain</level>	
	06 - handset analogue output (-3dB/step, default value = 0)	
	Note: This parameter is saved in NVM issuing AT&W comn	nand.
AT#HSRECG?	Read command returns the current handset analog output gain, in the format:	
	#HSRECG: <level></level>	
AT#HSRECG =?	Test command returns the supported range of values of parameter <level>.</level>	

3.5.6.16.1.9. Set Headset Sidetone - #SHFSD

#SHFSD - Set Heads	<mark>et Sidetone</mark>	SELINT 0 / 1
AT#SHFSD[=	Set command enables/disables the sidetone on headset audio output.	
[<mode>]]</mode>		
	Parameter:	

80000ST10025a Rev. 10 - 2011-02-17

#SHFSD - Set Head	set Sidetone	SELINT 0 / 1
	<mode> 0 - disables the headset sidetone (factory default) 1 - enables the headset sidetone.</mode>	
	Note: This setting returns to default after power off. Note: issuing AT#SHFSD<cr></cr> is the same as issuing the	Read command.
	Note: issuing AT#SHFSD= <cr> is the same as issui AT#SHFSD=0<cr>.</cr></cr>	ng the command
AT#SHFSD?	Read command reports whether the headset sidetone is or not, in the format: #SHFSD: <mode></mode>	currently enabled
AT#SHFSD=?	Test command returns the supported range of value <mode></mode> .	es of parameter

#SHFSD - Set Headset Sidetone SELINT 2		
AT#SHFSD=	Set command enables/disables the sidetone on headset audio output.	
[<mode>]</mode>		
	Parameter:	
	<mode></mode>	
	0 - disables the headset sidetone (factory default)	
	1 - enables the headset sidetone.	
	Note: This setting returns to default after power off.	
AT#SHFSD?	Read command reports whether the headset sidetone is currently enabled	
	or not, in the format:	
	#SHFSD: <mode></mode>	
AT#SHFSD=?	Test command returns the supported range of values of parameter	
	<mode>.</mode>	

3.5.6.16.1.10. Set Handset Sidetone - #SHSSD

#SHSSD - Set Handset Sidetone SELINT 2		
AT#SHSSD=	Set command enables/disables the sidetone on handset audio output.	
<mode></mode>		
	Parameter:	
	<mode></mode>	

80000ST10025a Rev. 10 - 2011-02-17

#SHSSD - Set Ha	ndset Sidetone	SELINT 2
	0 - disables the handset sidetone	
	1 - enables the handset sidetone (factory default)	
	Note: This parameter is saved in NVM issuing AT&W co	ommand.
AT#SHSSD?	Read command reports whether the headset sidetone i or not, in the format:	is currently enabled
	#SHSSD: <mode></mode>	
AT#SHSSD=?	Test command returns the supported range of values c	of parameter
	<mode>.</mode>	

3.5.6.16.1.11. Speaker Mute Control - #SPKMUT

· ·		
#SPKMUT - Speaker	Mute Control	SELINT 2
AT#SPKMUT= <n></n>	Set command enables/disables the global muting of the speaker audio line,	
	for every audio output (ring, incoming sms, voice, Network coverage)	
	Parameter:	
	<n></n>	
	0 - mute off, speaker active (factory default)	
	1 - mute on, speaker muted.	
	Note: this command mutes/activates both speaker audio paster approximate speaker and external speaker.	aths, internal
AT#SPKMUT?	Read command reports whether the muting of the speaker a voice call is enabled or not, in the format:	audio line during
	#SPKMUT: <n></n>	
AT#SPKMUT=?	Test command reports the supported values for <n></n> param	neter.

3.5.6.16.1.12. Open Audio Loop - #OAP

#OAP - Open Audio L	oop	SELINT 2
AT#0AP=[<mode>]</mode>	Set command sets Open Audio Path.	
	Parameter: 0 - disables Open Audio Path (default) 1 - enables Open Audio Path Note: the audio Loop will be activated on line select by command.	y the AXE pin or #CAP

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 576 of 604

80000ST10025a Rev. 10 - 2011-02-17

AT#0AP?	Read command reports whether the Open Audio Path is currently enabled or not, in the format:
	#OAP: <mode></mode>
AT#OAP=? Test command returns the supported range of values of param	
	> .
Note	The audio loop will be established between microphone and speaker using sidetone scaling value.

3.5.7.15.2. Tones configuration

3.5.6.16.1.13. Signaling Tones Mode - #STM

#STM - Signaling To r	nes Mode SELINT 0 / 1
AT#STM	Set command enables/disables the signaling tones output on the audio path
[= <mode>]</mode>	selected with #SRP command
	Parameter: <mode> - signaling tones status 0 - signaling tones disabled 1 - signaling tones enabled</mode>
	Note: AT#STM=0 has the same effect as AT+CALM=2 ; AT#STM=1 has the same effect as AT+CALM=0 .
	Note: If parameter is omitted then the behaviour of Set command is the same as Read command
AT#STM?	Read command reports whether the current signaling tones status is enabled or not, in the format:
	#STM: <mode></mode>
AT#STM=?	Test command reports supported range of values for parameter <mode></mode> .

#STM - Signaling To	nes Mode	SELINT 2		
AT#STM= [<mode>]</mode>	Set command enables/disables the signaling tones output on the audic selected with #SRP command			
	Parameter: <mode> - signaling tones status 0 - signaling tones disabled 1 - signaling tones enabled</mode>			

80000ST10025a Rev. 10 - 2011-02-17

#STM - Signaling	j Tones Mode	SELINT 2
	2 - all tones disabled	
	Note:	
	AT#STM=0 has the same effect as AT+CALM=2;	
	AT#STM=1 has the same effect as AT+CALM=0.	
AT#STM?	Read command reports whether the current signaling tones status is enabled or not, in the format:	
	#STM: <mode></mode>	
AT#STM=?	Test command reports supported range of values fo	r parameter <mode></mode> .

3.5.6.16.1.14. Tone Playback - #TONE

#TONE - Tone Playba	ack SELINT 2
AT#TONE= <tone> [,<duration>]</duration></tone>	Execution command allows the reproduction of DTMF tones, standard free tone, standard busy tone and a set of user defined tones for a certain time. Parameters: <tone> - ASCII characters, range is ((0-9),#,*,(A-D),(G-L),Y,Z); - (0-9), #,*,(A-D): DTMF tone - (G-L): User Defined Tones - Y: free tone - Z: busy tone <duration> - Duration of current tone in 1/10 of Sec. 1300 - tenth of seconds (default is 30)</duration></tone>
AT#TONE=?	Test command returns the supported range of values for parameters <tone></tone> and <duration></duration> .
Note:	See AT#UDTSET command to set user defined tones

3.5.6.16.1.15. Extended tone generation - #TONEEXT

#TONEEXT – Extende	ed tone generation SE	LINT 2	
AT# <mark>TONEEXT</mark> = <toneld>,<act></act></toneld>	Execution command allows the reproduction of DTMF tones, standard free tone, standard busy tone and a set of user defined tones for a infinite time, or stop the running tone		
	Parameters: < toneId > - ASCII characters in the set (0-9), #,*,(A-D),(G-L),Y,Z		

80000ST10025a Rev. 10 - 2011-02-17

<mark>#TONEEXT – Extende</mark>	ed tone generation	SELINT 2
	 (0-9), #,*,(A-D) : DTMF tone (G-L) : User Defined Tones²⁸. y : free tone z: busy tone act > - Action to be performed. 0: Stop the <toneld> if running.</toneld> 1: Start the <toneld>.</toneld> 	
AT#TONEEXT=?	Test command returns the range of supported values for para <a><toneld>,<a< a=""></a<></toneld>	ameter

3.5.6.16.1.16. Tone Classes Volume - #TSVOL

#TSVOL – Tone C	lasses Volume SELINT 2	
AT#TSVOL=	Set command is used to select the volume mode for one or more tone	
<class>,</class>	classes.	
<mode></mode>		
[, <volume>]</volume>	Parameters:	
	<class> -sum of integers each representing a class of tones which the</class>	
	command refers to	
	1 - GSM tones	
	2 - ringer tones	
	4 - alarm tones	
	8 - signalling tones	
	16 - DTMF tones	
	32 - SIM Toolkit tones	
	64 - user defined tones	
	128 – Dial tones	
	255 - all classes	
	modes - it indicates which volume is used for the classes of tones represented by <class></class>	
	0 - default volume is used	
	1 - the volume <volume></volume> is used	
	volume> - volume to be applied to the set of classes of tones represented by class> ; it is mandatory if mode> is 1 . 0 <i>max</i> - the value of <i>max</i> can be read issuing the Test command AT#TSVOL=?	d

²⁸ See also AT#UDTSET, AT#UDTRST and AT#UDTSAV command description following in this document.

3.5.6.16.1.17. User Defined Tone SET - #UDTSET command

#UDTSET – User	Defined Tone SET	SELINT 2	
AT#UDTSET=	Set command sets frequency and amplitude composition for a User Defined		
<tone></tone>	Tone.	Tone.	
, <f1>,<a1></a1></f1>	Parameters:	Parameters:	
[, <f2>,<a2></a2></f2>	<tone> - tone index (G,H,I,J,K,L)</tone>	<tone> - tone index (G,H,I,J,K,L)</tone>	
[, <f3>,<a3>]]</a3></f3>	<pre><f3>,<a3>]] </a3></f3></pre> <pre><fi> - frequency in Hz; range is (300,3000) in step of 1 Hz</fi></pre> <pre><pre><ai> - amplitude in dB; range is (10,100) in step of 1 dB</ai></pre></pre>		
	Note: Ai = 100 is equal to the max value of the single attenuate output to the difference between 100 and (ex: Ai = 80 is equal to 100-80 = -20dB).		

80000ST10025a Rev. 10 - 2011-02-17

#UDTSET – User Det	ined Tone SET	SELINT 2
	Note: issuing AT&F1 or AT&Z has the effect to set the para last saved in NVM values	meters with the
	Note: Ai = 0 and Fi = 0 are only values for uninitialized parameters and car be issued by AT command. Every time the set command is issued, the unspecified parameters are automatically reset to zero. (Ai,Fi) issuing needs also (Aj,Fj) with j <i.< th=""></i.<>	
AT# UDTSET?	Read command returns the current settings for the tones: #UDTSET: G, <f1>,<a1>,<f2>,<a2>,<f3>,<a3> #UDTSET: H, <f1>,<a1>,<f2>,<a2>,<f3>,<a3> #UDTSET: I, <f1>,<a1>,<f2>,<a2>,<f3>,<a3> #UDTSET: J, <f1>,<a1>,<f2>,<a2>,<f3>,<a3> #UDTSET: J, <f1>,<a1>,<f2>,<a2>,<f3>,<a3> #UDTSET: L, <f1>,<a1>,<f2>,<a2>,<f3>,<a3> #UDTSET: L, <f1>,<a1>,<f2>,<a2>,<f3>,<a3></a3></f3></a2></f2></a1></f1></a3></f3></a2></f2></a1></f1></a3></f3></a2></f2></a1></f1></a3></f3></a2></f2></a1></f1></a3></f3></a2></f2></a1></f1></a3></f3></a2></f2></a1></f1></a3></f3></a2></f2></a1></f1>	
AT# UDTSET =?	Test command returns the supported range of values for < <ai></ai> parameters.	tone>, <fi> and</fi>

3.5.6.16.1.18. User Defined Tone SAVE - #UDTSAV command

#UDTSAV – User Def	ined Tone SAVe	SELINT 2
AT#UDTSAV	Execution command saves the actual values of frequency a parameters that have been set with the command #UDTS	•
AT#UDTSAV =?	Test command returns the OK result code.	
Example	AT#UDTSAV OK Current tones are saved in NVM	

3.5.6.16.1.19. User Defined Tone Reset - #UDTRST command

#UDTRST – User Defined Tone ReSeT SELINT 2		SELINT 2
AT#UDTRST	Execution command resets to the default set t and amplitude parameters that can be set with	

80000ST10025a Rev. 10 - 2011-02-17

#UDTRST – User De	fined Tone ReSeT	SELINT 2
AT#UDTRST =?	Test command returns the OK result code.	
Example	AT#UDRST OK	
	The default value tones are restored in NVM	

3.5.7.15.3. Audio profiles

3.5.6.16.1.20. Audio Profile Selection - #PSEL

#PSEL - Audio Profi	le Selection SEL	<mark>INT 2</mark>
AT#PSEL= <prof></prof>	Set command selects the active audio profile	
	Parameter: <prof>: current profile 0 - standard profile 13 - extended profile, modificable.</prof>	
	Note: This parameter is saved in NVM issuing AT&W command.	
AT#PSEL?	The read command returns the active profile in the format:	
	#PSEL: <prof></prof>	
AT#PSEL=?	Test command returns the supported range of values of parame	eter <prof></prof> .

3.5.6.16.1.21. Audio Profile Configuration Save - #PSAV

#PSAV - Audio	Profile Configuration Save SELINT 2
AT#PSAV	Execution command saves the actual audio parameters in the NVM of the device. It is not allowed if active audio profile is 0.
	The audio parameters to store are:
	 microphone line gain earpiece line gain side tone gain LMS adaptation speed LMS filter length (number of coefficients) speaker to micro signal power relation noise reduction max attenuation
	 noise reduction weighting factor (band 300-500Hz) noise reduction weighting factor (band 500-4000Hz)

80000ST10025a Rev. 10 - 2011-02-17

#PSAV - Audio Pr	ofile Configuration Save	SELINT 2
	 AGC Additional attenuation AGC minimal attenuation AGC maximal attenuation Uplink path biquad filters Downlink path biquad filters 	
AT#PSAV=?	Test command returns the OK result code.	
Example	AT#PSAV OK <i>Current audio profile is saved in NVM</i>	

3.5.6.16.1.22. Audio Profile Factory Configuration - #PRST

#PRST - Audio Profil	e Factory Configuration SELINT 2
AT#PRST	Execution command resets the actual audio parameters in the NVM of the device to the default set. It is not allowed if active audio profile is 0. The audio parameters to reset are:
	 microphone line gain earpiece line gain side tone gain LMS adaptation speed (step size) LMS filter length (number of coefficients) speaker to micro signal power relation noise reduction max attenuation noise reduction weighting factor (band 300-500Hz) noise reduction weighting factor (band 500-4000Hz) AGC Additional attenuation AGC minimal attenuation AGC maximal attenuation
AT#PRST=?	Test command returns the OK result code.
Example	AT#PRST OK <i>Current audio profile is reset</i>

3.5.7.15.4. Echo canceller configuration

3.5.6.16.1.23. Audio Profile Setting - #PSET

#PSET - Audio Profil	e Setting	SELINT 2
AT#PSET=	Set command sets parameters for the active audio profile.	It is not allowed

80000ST10025a Rev. 10 - 2011-02-17

#PSET - Audio Profile Setting SELINT 2		SELINT 2
<scal _in=""></scal>	if active audio profile is 0.	·
[, <scal _out=""></scal>		
[, <side_tone_atten></side_tone_atten>	Parameters:

3.5.7.15.7. DTMF decoder

3.5.6.16.1.35. Embedded DTMF decoder enabling - #DTMF

80000ST10025a Rev. 10 - 2011-02-17

#DTMF – Embedded DTMF de	ecoder enabling SELINT 2
AT#DTMF= <mode></mode>	Set command enables/disables the embedded DTMF decoder.
	Parameters:
	<mode>:</mode>
	0 – disable DTMF decoder (default)
	1 – enables DTMF decoder
	Note: This functionality has to be enabled only with AT#CPUMODE=1.
	Note: the receiving of a DTMF tone is pointed out with an unsolicited message through AT interface in the following format:
	#DTMFEV: x with x as the DTMF digit
	Note: the duration of a tone should be not less than 50ms.
	Note: the value set by command is not saved and a software or
	hardware reset restores the default value. The value can be stored in NVM using profiles.
	The value can be stored in NVM dsing profiles.
	Note: When DTMF decoder is enabled, PCM playing and recording are automatically disabled (AT#SPCM will return error).
AT#DTMF?	Read command reports the currently selected <mode></mode> in the format:
	#DTMF: <mode></mode>
AT#DTMF =?	Test command reports supported range of values for all parameters.

3.5.6.16.1.36. Embedded DTMF decoder configuration - #DTMFCFG

#DTMFCFG – Embedded DTMF decoder configuration SELINT 2		<mark>SELINT 2</mark>	
AT#DTMFCFG= <scaling></scaling>	Set command allows configuration of the embedded DTMF decoder.		
, <threshold></threshold>			
	Parameters:		
	<scaling>:</scaling>		
	38 – this is the scaling applied to the pcm sample	s in order to

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

	 manage arithmetic operations. The default value is 7. <threshold>:</threshold> 15009999 - this is the numeric threshold use to detect DTMF tones. The default value is 2500. Note: The default values were chosen after a fine tuning, so every change should be done very carefully to avoid wrong decoding. Note: the values set by command are not saved and a software or hardware reset restores the default value.
AT#DTMFCFG?	Read command reports the currently selected <scaling>,<threshold> in the format: #DTMFCFG: <scaling>,<threshold></threshold></scaling></threshold></scaling>
AT#DTMFCFG=?	Test command reports supported range of values for all parameters.

3.5.7.15.8. Misellaneous commands

3.5.6.16.1.37. PCM Play and Receive - #SPCM

#SPCM - PCM Play A	nd Receive	SELINT 2
AT#SPCM= <mode>[,dir]</mode>	Execution command allows user either to send spe microphone and/or downlink audio channel to seri PCM coming from serial port to speaker and/or up modes are also available during speech calls.	al port, or to reproduce a
	Parameters: <mode>: action to be execute; 1 - reproduce PCM stream from serial to selected 2 - send speech from selected path to serial.</mode>	d path.
	 <dir>: Select the audio path.</dir> 0 - send/receive to/from analog front end 1 - send/receive to/from audio channel 2 - send/receive to/from both analog front end ar 	nd audio channel

80000ST10025a Rev. 10 - 2011-02-17

	 Note: Execution command switches module in online mode, with flow control set by &Kx. Module moves back to command mode either afer entering the escape sequence +++ or as a consequence of a DTR transition. Note: PCM stream format must be 8 bit, 8KHz sampling, Mono. The following table summarizes the status of audio path during a speech call for different configurations and with sidetone disabled: 		
		mode = 1	mode = 2
	dir = 0	Uplink off / Downlink on PCM stream on speaker	Uplink off / Downlink off PCM stream from microphone
			Uplink off / Downlink off PCM stream from Downlink
	dir = 2	Uplink on / Downlink on PCM stream on both speaker and Uplink	Uplink off / Downlink off PCM stream from both microphone and Downlink
	Sidetone is active during a voice call (HF path default configuration).		
AT#SPCM=?	Test command returns the supported range of values for parameters <mode> and <dir>.#CDCM</dir></mode>		
Example	#SPCM: <mode>,<dir> AT#SPCM=1,0 CONNECT +++ NO CARRIER</dir></mode>		
	Note: after the CONNECT, PCM stream has to be sent to serial port		s to be sent to serial port
	CONNECT +++		
	Note: after	the CONNECT, PCM stream car	n be read from serial port

3.5.6.16.1.38. TeleType Writer - #TTY

80000ST10025a Rev. 10 - 2011-02-17

#TTY - TeleType Writ	#TTY - TeleType Writer SELINT 2		
AT#TTY= <support></support>	Set command enables/disables the TTY functionality.		
	Parameter: < support> 0 - disable TTY functionality (factory default) 1 - enable TTY functionality		
AT#TTY?	Read command returns whether the TTY functionalityis currently enabled or not, in the format:		
	#TTY: <support></support>		
AT#TTY=?	Test command reports the supported range of values for parameter <support>.</support>		

3.5.6.16.1.39. Digital Voiceband Interface - #DVI

<pre>#DVI - Digital Voiceb</pre>	and Interface SELINT 2
AT#DVI= <mode></mode>	Set command enables/disables the Digital Voiceband Interface.
[, <dviport>,</dviport>	
<clockmode>]</clockmode>	Parameters:
	<mode> - enables/disables the DVI.</mode>
	0 - disable DVI; audio is forwarded to the analog line; DVI pins can be used for other purposes, like GPIO, etc. (factory default)
	1 - enable DVI; audio is forwarded to the DVI block
	2 - enable DVI; audio is forwarded both to the DVI block and to the analog lines (Note: analog input disabled)
	<dviport></dviport>
	1 - DVI port 1 will be used (factory default)
	 2 - DVI port 2 will be used. Not available for GC864-QUAD V2, GC864-DUAL V2, GE864-QUAD Automotive V2,GE864-QUAD ATEX, GE864-QUAD V2, GE864-DUAL V2, GE865-QUAD (see Test Command for availability of this port)
	<clockmode></clockmode>
	0 - DVI slave
	1 - DVI master (factory default)
	Note: setting <clockmode>=0 has full effect only if <dviport>=1</dviport></clockmode>
	NOTE: DVI slave is available only on port 1
	NOTE: for further information see "Digital Voice Interface Application Note"
	(Rev. 2)
AT#DVI?	Read command reports last setting, in the format:

80000ST10025a Rev. 10 – 2011-02-17

#DVI - Digital Voiceband Interface SELINT		SELINT 2
	#DVI: <mode>,<dviport>,<clockmode></clockmode></dviport></mode>	
AT#DVI=?	Test command reports the range of supported values f <mode>,<dviport> and <clockmode></clockmode></dviport></mode>	for parameters
Example	AT#DVI=2,1,1 OK	
	Both analog and DVI activated for audio. DVI is configu providing on DVI Port #1	red as master

3.5.7.16. Emergency call and ECall Management

3.5.7.16.1. dial an emergency call - #EMRGD

<mark>#EMRGD –</mark> dial an emerg	gency call SELINT 2
AT#EMRGD[= <par>]</par>	This command initiates an emergency call.
	Parameters:
	<par>:</par>
	0 – initiates an emergency call without specifying the Service Category. (default value)
	 131 - sum of integers each representing a specific Emergency Service Category: 1 - Police 2 - Ambulance 4 - Fire Brigade 8 - Marine Guard 16 - Mountain Rescue
	32 - Manually Initiated eCall (if eCall is supported – Rel8 feature)
	64 - Automatically Initiated eCall (if eCall is supported– Rel8 feature)
	When the emergency call can initiate, an indication of the Service Categories selected is shown before the OK in the following format
	#EMRGD: <serv>[,<serv>[,<serv]]< td=""></serv]]<></serv></serv>
	Where

80000ST10025a Rev. 10 - 2011-02-17

	<serv> "Police "Ambul" "FireBrig" "MarineGuard" "MountRescue" "MleC" "AleC" Example: AT#EMRGD=17 #EMRGD: "Police"," MountRescue "</serv>
	ок
AT#EMRGD	The execution command initiates an emergency call without specifying the Service Category.
AT#EMRGD?	The read command reports the emergency numbers received from the network (Rel5 feature) and the associated service categories in the format
	[#EMRGD: <num1>[,<par1>,<serv>[,<serv>[,<serv]]] [#EMRGD: <num<i>n>[,<par<i>n>,<serv>[,<serv>[,<serv]]]]< td=""></serv]]]]<></serv></serv></par<i></num<i></serv]]] </serv></serv></par1></num1>
	Where
	<num<i>n> Is the emergency number (that can be dialled with ATD command).</num<i>
	- 131 - sum of integers each representing a specific Emergency Service Category: 1 - Police 2 - Ambulance 4 - Fire Brigade 8 - Marine Guard 16 - Mountain Rescue
	32 - Manually Initiated eCall (if eCall is supported – Rel8 feature)

80000ST10025a Rev. 10 - 2011-02-17

	64 - Automatically Initiated eCall (if eCall is supported– Rel8 feature) Example:
	AT#EMRGD? #EMRGD: 123,2,"Ambul" #EMRGD: 910,5,"Police","FireBrig"
	ок
AT#EMRGD=?	Test command reports the supported range of values for parameter <par></par> .
	If eCall is supported 0-32,64
	If eCall is not supported 0-31

3.5.7.16.2. IVS push mode activation - #MSDPUSH

#MSDPUSH – IVS push mode activation SELINT :		<mark>SELINT 2</mark>
AT#MSDPUSH	Execution command enables IVS to issue the requ transmission. It reuses downlink signal format to message to the PSAP.	
AT#MSDPUSH=?	Test command returns the OK result code.	

3.5.7.16.3. Sending MSD data to IVS - #MSDSEND

#MSDSEND – Sending MSD data to IVS SELINT 2		SELINT 2
AT#MSDSEND	Execution command allows to send 140 bytes o IVS embedded while modem is in command mo	
	The device responds to the command with the p for the MSD to send.	prompt '>' and waits

80000ST10025a Rev. 10 - 2011-02-17

	To complete the operation send Ctrl-Z char (0x1A hex); to exit without writing the message send ESC char (0x1B hex).
	If data are successfully sent, then the response is OK . If data sending fails for some reason, an error code is reported
	Note: the maximum number of bytes to send is 140; trying to send more data will cause the surplus to be discarded and lost.
AT#MSDSEND=?	Test command returns the OK result code.

3.5.7.16.4. Initiate eCall - +CECALL

+CECALL – Initiate eCall	SELINT 2
AT+CECALL= <type ecall="" of=""></type>	Set command is used to trigger an eCall to the network. Based on the configuration selected, it can be used to either trigger a test call, a reconfiguration call, a manually initiated call or an automatically initiated call. Parameters: <type ecall="" of="">: 0 - test call 1 - reconfiguration call 2 - manually initiated eCall 3 - automatically initiated eCall</type>
AT+CECALL?	Read command returns the type of eCall that is currently in progress in the format: +CECALL: [<type ecall="" of="">]</type>
AT+CECALL=?	Test command reports the supported range of values for parameter <type ecall="" of=""></type> .

AT Commands Reference Guide 80000ST10025a Rev. 10 – 2011-02-17

4. List of acronyms

ARFCN	Absolute Radio Frequency Channel Number
AT	Attention command
BA	BCCH Allocation
ВССН	Broadcast Control Channel
СА	Cell Allocation
СВМ	Cell Broadcast Message
CBS	Cell Broadcast Service
ССМ	Current Call Meter
CLIR	Calling Line Identification Restriction
CTS	Clear To Send
CUG	Closed User Group
DCD	Data Carrier Detect
DCE	Data Communication Equipment
DCS	Digital Cellular System
DGPS	Differential GPS, the use of GPS measurements,
	which are differentially corrected
DNS	Domain Name System
DSR	Data Set Ready
DTE	Data Terminal Equipment
DTMF	Dual Tone Multi Fraquency
DTR	Data Terminal Ready
GGA	GPS Fix data
GLL	Geographic Position – Latitude/Longitude
GLONASS	Global positioning system maintained by the
	Russian Space Forces
GMT	Greenwich Mean Time
GNSS	Any single or combined satellite navigation system
	(GPS, GLONASS and combined GPS/GLONASS)
GPRS	Global Packet Radio Service
GPS	Global Positioning System
GSA	GPS DOP and Active satellites
GSM	Global System Mobile
GSV	GPS satellites in view
HDLC	High Level Data Link Control
HDOP	Horizontal Dilution of Precision
IMEI	International Mobile Equipment Identity
IMSI	International Mobile Subscriber Identity
IP	Internet Protocol

80000ST10025a Rev. 10 - 2011-02-17

IRA	International Reference Alphabet
IWF	Interworking Function
MO	Mobile Originated
MT	either Mobile Terminated or Mobile Terminal
NMEA	National Marine Electronics Association
NVM	Non Volatile Memory
PCS	Personal Communication Service
PDP	Packet Data Protocol
PDU	Packet Data Unit
PIN	Personal Identification Number
PPP	Point to Point Protocol
PUK	Pin Unblocking Code
RLP	Radio Link Protocol
RMC	Recommended minimum Specific data
RTS	Request To Send
SAP	SIM Access Profile
SCA	Service Center Address
SMS	Short Message Service
SMSC	Short Message Service Center
SMTP	Simple Mail Transport Protocol
TA	Terminal Adapter
ТСР	Transmission Control Protocol
TE	Terminal Equipment
UDP	User Datagram Protocol
USSD	Unstructured Supplementary Service Data
UTC	Coordinated Universal Time
VDOP	Vertical dilution of precision
VTG	Course over ground and ground speed
WAAS	Wide Area Augmentation System
